

Arun Yenugu
Dot Net Full Stack Developer

Dallas, Texas, USA • arunyenugu2000@gmail.com • +1 (937) 814-6944 • LinkedIn

Summary

.NET Developer with 5 years of experience designing and optimizing web applications. Skilled in ASP.NET Core, C#, SQL Server, and front-end frameworks like React.js and Angular. Expertise in building scalable, secure applications with a focus on performance, data integrity, and cloud-based architecture. Strong background in RESTful API development, real-time communication using SignalR, and CI/CD automation.

Education

Master in Computer Science
University of Central Missouri, USA

Aug 2022 - May 2024

Bachelor of Engineering in Electronics and Communication
Lovely Professional University, India

Jul 2015 – May 2019

Skills

- **Programming Languages:** C#, .NET, SQL, JavaScript, TypeScript, HTML5, CSS3
- **Front-End Technologies:** Angular, React.js, Bootstrap, jQuery, Blazor
- **Back-End Technologies:** .NET Core, ASP.NET MVC, Web API, Microservices
- **Database Management:** SQL Server, NoSQL, MongoDB, Stored Procedures, Entity Framework, LINQ, T-SQL, PL/SQL, Oracle
- **Cloud Technologies:** Azure (Azure App Services, Azure Functions, Azure SQL Database, Azure Blob Storage, Azure Service Bus, Azure Cosmos DB), AWS (EC2, S3, RDS, IAM, LAMBDA)
- **DevOps Tools:** Azure DevOps, Jenkins, GitHub, TFS, Docker, Kubernetes
- **Testing Frameworks:** NUnit, Moq, XUnit, SonarQube, Swagger, Postman
- **Project Management:** Agile Methodologies, Scrum, Kanban, JIRA, CI/CD Implementation, TDD, Scrum

Certification

- **AZ-900** Azure Fundamentals

Experience

Humana, USA
.Net Full Stack Developer

Aug 2024 – Present

- Developed a healthcare management system with ASP.NET Core and React.js, ensuring scalability using SOLID principles.
- Designed and secured RESTful APIs for patient records and billing, reducing unauthorized access using JWT authentication and SSL encryption.
- Automated appointment reminders with Azure Functions, reducing manual effort and improving efficiency.
- Optimized database queries using Entity Framework Core (EF Core), increased performance by 15%.
- Implemented Infrastructure as Code (Iac) with Terraform for streamlined cloud resource management.
- Engineered a patient portal allowing users to access their medical records, test results, and appointment history, integrating React.js components with the back-end APIs to ensure a seamless user experience.
- Ensured compliance with healthcare industry standards, including FHIR (Fast Healthcare Interoperability Resources), for secure data exchange.
- Enhanced system performance by analysing and optimizing SQL Server queries and stored procedures, resulting in a reduction in query execution time and improved database scalability through proper indexing and normalization.
- Improved deployment processes by integrating CI/CD pipelines with Azure DevOps, reducing deployment time by 35%.

NTT DATA, India
.Net Developer

Oct 2019 – July 2022

- Designed a Microservices architecture with .NET Core, improving scalability and modularity.
- Integrated RabbitMQ and Kafka for asynchronous messaging and event streaming, reduced processing time.
- Migrated infrastructure to AWS, reducing operational costs by using EC2, RDS, and S3.
- Defined AWS Lambda functions for file processing, decreasing compute resource usage by 25%.
- Strengthened authentication and authorization by implementing OAuth 2.0 and OpenID Connect.
- Created interactive web applications using Blazor, implementing reusable components to enhance UI consistency and improve development efficiency by 20%.

- Deployed and managed containerized applications using Docker, ensuring consistent performance across environments.
- Increased test coverage by using NUnit and Moq, reducing post-deployment defects.
- Implemented AWS CloudWatch monitoring, reducing system downtime by 50%.
- Collaborated with cross-functional teams and Product Managers to develop scalable, user-centric applications, enhancing user experience ratings.

Intex Technologies, India
.Net Developer

Jan 2018 – Sep 2019

- Engineered the core back-end logic for a financial dashboard using ASP.NET Core and MVC, ensuring efficient data flow and real-time interaction.
- Integrated SignalR for live stock market updates, improving trading efficiency and reduced update delays.
- Optimized data retrieval and reporting processes by 25% implementing LINQ and SQL Server views for complex financial queries that deal with large datasets.
- Automated financial report generation using SQL Server Reporting Services (SSRS) and SQL Server Integration Services (SSIS) enhances efficiency and improves decision-making.
- Worked closely with the front-end team to design a responsive and interactive user interface using Angular, improving user engagement.
- Strengthened code quality and reduced bugs by 30% through static analysis with SonarQube.
