

Education

- **Northeastern University**

Bachelor of Science - BS, Mathematics and Political Science

Sep 2020 - Dec 2024

GPA: 3.26/4.0

Coursework: Probability & Statistics, Linear Algebra, Statistics & Stochastic Processes, Probability & Risk, Quantitative Techniques

Experience

- **Quantitative Research Assistant**

Northeastern University Department of Political Science

Jan 2023 - present

- Cleaned and analyzed datasets with thousands of observations (MAROB, REVMOD, BAAD, TALID, UCDP, EDTG, etc.) using Pandas, ensuring data integrity across multiple sources
- Conducted 95+ regression analyses (Logit/Probit, Ordinal, Multinomial, Fractional, Beta, Cox Proportional-Hazards, Weibull Accelerated Failure-Time, etc.), mainly analyses with interaction effects, to test hypotheses on terrorist group outcomes under uncertainty
- Generated original findings from statistical tests and began co-authoring four research papers on Islamist terrorism with political science faculty to submit to peer-reviewed journals
- Developed data visualizations for predicted probabilities (survival curves, interaction plots, etc.) using Matplotlib to communicate complex findings to academic and non-technical audiences
- Validated results with extensive battery of robustness checks
- Authored 1,500-word report on the Second Intifada for a multi-billion-dollar terrorism lawsuit

- **Research Student**

Northeastern University Dialogue of Civilizations Study Abroad Program

United Nations Office, Geneva, Switzerland

July 2022 (1 month)

- 1 of 26 students selected from a pool of 60-65 applicants for competitive UN study program
- Met with ambassadors, diplomats, and Nobel Laureates to hear their insights on diplomacy
- Wrote an essay on the Treaty on the Prohibition of Nuclear Weapons (TPNW) using invaluable primary and secondary sources from the UN Library & Archives in the Palace of Nations

Projects

- **Python Statistical Analysis** – Performed multivariate regression analysis on structured datasets (time-series and cross-sectional) to systematically test hypotheses, visualizing results using Matplotlib
- **SQL Reporting** – Queried data on ideology for 100+ rebel groups, reducing manual reporting effort by 90% and ensuring reproducibility
- **Excel Reporting Automation** – Ran XLOOKUP formulas to automate variable mapping (ideology of 500+ militant groups; country-year capabilities) across datasets, reducing manual reporting effort by 90% and eliminating human error
- **Paper Writing:** Developing research papers for submission as publishable manuscripts in journal format, presenting cause-and-effect theories with rigorous empirical evidence

Skills

Data Analysis: Hypothesis Testing | Regression Analysis | Data Cleaning | Statistical Inference | Data Visualization

Tools: Python (Pandas, NumPy, Statsmodels, Lifelines, Matplotlib) | SQL (Querying) | Excel (XLOOKUP)

Writing & Communication: Academic Writing | Research Papers | Structured Reports | Teamwork
