

ASHISH ROUTHU

Jersey City, New Jersey.
+1 316-221-4374 [LinkedIn](#) [Gmail](#)

Objective

Data Engineer with expertise in building scalable ETL pipelines and experience in big data technologies, seeking to leverage my strong background in AWS, Python, and data processing technologies to contribute to EY's AI & Data team.

Education

Wichita State University

Master of Science in computer science

Aug 2022 – Dec 2023

Wichita, Kansas

Sathyabama institute of science and technology

Bachelor of Engineering in computer science

Aug 2018 – May 2022

Chennai, India

Relevant Coursework

- Power Business Intelligence
- Web Programming
- Advanced Analysis of Algorithms
- Advanced Software Engineering
- Software Analysis Methods
- Relational Database Management Systems

Technical Skills

Big Data Technologies: Hadoop, Spark, Kafka, AWS Glue, S3, Athena, CloudWatch

Languages and Tools: Java, Python, C, SQL, PL/SQL, JavaScript, AWS Services (S3, Glue, Athena, CloudWatch), JIRA, Linux, Git, GitHub

Development & Frameworks: Spring Boot, Angular(L1), Node.js(L1), RESTful APIs, Microservices Cloud, AWS, EC2, SQS, EKS, Terraform Lambda

Testing & DevOps: JUnit, Mockito, Jenkins, CI/CD pipelines.

Big Data Technologies: Hadoop, Spark, Kafka, AWS Glue, S3, Athena, CloudWatch

Experience

Data Analyst/ Eli Lilly

Feb 2024- Dec 2024

Skills: Python, Spark, Hadoop, Kafka, AWS (Glue, S3, Athena, CloudWatch), Tableau, Power BI, Agile, Data Security.

- Designed scalable ETL pipelines and workflows, ensuring efficient data processing and integration.
- Leveraged AWS Glue, S3, Athena, and CloudWatch for big data processing, optimizing workflows by 30%.
- Ensured data quality and reliability through comprehensive checks and validations.
- Built advanced dashboards in Tableau and Power BI, enabling actionable business insights.
- Engaged with stakeholders across teams to align data engineering solutions with business needs.
- Implemented data security best practices, ensuring compliance with privacy standards.
- Maintained agile project delivery, achieving milestones on time and efficiently.
- Designed and implemented data models for enterprise data warehouse, including dimensional modeling and star schema design, improving data accessibility by 40%.
- Created and maintained data dictionaries and entity-relationship diagrams (ERDs) to document complex data structures across multiple business domains.

Data Engineer/ Wipro corporation

Aug 2021- Jul 2022

Skills: Python, SQL, ETL Pipeline Development, Data Modeling, Data Warehousing, Apache Hadoop, Spark, Power BI

- Designed and implemented scalable ETL pipelines using Python and Apache Spark, processing over 1 million records daily with 99% reliability while ensuring data quality through automated monitoring frameworks.
- Built and optimized data models and warehouse schemas, improving query performance by 30% while maintaining data integrity and governance standards.
- Developed interactive Power BI dashboards for pipeline performance metrics and data quality KPIs, enabling real-time monitoring and reducing incident response time by 25%.
- Collaborated with cross-functional teams in an Agile environment to align data pipeline requirements with business needs, while implementing robust data security protocols and documentation.

Projects

Real-time Data Processing Pipeline / AWS Glue, Python, S3, Athena, CloudWatch

Dec 2023

Scope: Developed and implemented a scalable data engineering pipeline using AWS services to process and analyze large datasets from multiple sources.

- Created AWS Glue ETL jobs for batch processing of data from various S3 buckets, implementing transformations using Python. Implemented data catalog crawlers and utilized Glue's visual ETL tools for efficient metadata management and workflow creation.
- Developed a data lake architecture on S3, organizing data into raw, processed, and analytics zones. Integrated AWS Athena for SQL-based analysis, enabling ad-hoc queries on processed data.
- Implemented error handling, logging, and data quality checks using AWS CloudWatch and custom Python scripts. Optimized performance through configuration tuning and Glue's built-in features.
- Implemented data encryption protocols and automated testing suites to ensure ETL job reliability and data security.

Distributed Systems Architecture for E-commerce / Java, Spring Boot, AWS.

Dec 2024

Scope: Designed and implemented scalable microservices architecture for handling high-volume transaction processing

- Developed microservices using Spring Boot to handle user authentication, inventory management, and order processing.
- Implemented distributed caching using Redis, improving response times by 40%.
- Created fault-tolerant system design with circuit breakers and fallback mechanisms.

Certifications

- [Data Warehousing-The Ultimate Guide](#)
- [AZ-900](#)
- [AWS Certified Developer Associate](#)
