LinkedIn: [linkedin.com/in/ashitha-ramesh-a80b4334](https://www.linkedin.com/in/ashitha-ramesh-a80b4334)

SUMMARY

- Skilled Information Technology Professional with more than 12 years of experience in Software Design Life Cycle process like defining Scope, Planning, gathering Business Requirements, Analysis, Design, Development, Testing and Implementation of Software Applications.
- Collaborated with cross-functional stakeholders in both Business and Technical domains to deliver optimal business process solutions and technical designs.
- Has experience working on Healthcare, Banking/Learning applications.
- Functional Knowledge of Medicaid Management Information System MMIS, Member Enrollment and Billing information.
- Has good experience working on Membership, Billing, Claims Payment Processing in relation to HIPAA, EDI 4010, 5010 X12, ICD-9 ICD-10, codes 834, 837,835, and 270, 271.
- Successfully managed delivery of projects in structured Waterfall and Agile frameworks; in fast paced environment with changing/competing priorities.
- Has experience creating Business Requirements Document, Use Case Specifications, Functional/Technical Specification Documents, Workflows and conducting Joint Application Development (JAD) sessions.
- Proactively managed end-to-end delivery, tracked timelines, project activities from an end-to-end perspective to ensure daytoday activities are aligned with project goals and objectives.
- Familiarity with Functional Testing, Integration Testing, Regression Testing, User Acceptance Testing and Production Deployment.
- Knowledgeable working with ETL process - Extract, Transform and Load of data into a data warehouse.
- Designed and implemented SQL queries for testing and report/data validation.
- Excellent business communication and presentation skills. Ability to collaborate with all stakeholders and keeping leadership team apprised of milestones, project status, and resolving issues/conflicts.
- Organized, goal-oriented, self-starter with ability to learn and adapt to new technologies, manage multiple projects while following through from start to completion.

EDUCATION

Bachelors of Engineering in Computer Science.

RESIDENT STATUS: US Green Card

TECHNICAL SKILLS

Methodologies	Waterfall, Agile, Scrum
MS 365	MS Word, MS Excel, MS PowerPoint, MS Access, MS Teams, MS Outlook, MS OneNote
Process Modelling Tools	MS Visio, Lucid Chart, SmartDraw
Project Management Tools	MS Office, MS Project, JIRA, Confluence.
Statistical tools	Minitab, MS Excel (2013, 2016, Office 365), Google Sheets Spreadsheet

Reporting Tools	Tableau, MS Excel, Power BI, DOMO
Web Services	SOAP, REST, XML, JSON, Swagger tools, POSTMAN.
Testing Tools	Zephyr, HP ALM, HP QC
Databases Tools	Mongo DB, My SQL, Oracle DB, SQL Server
Change Management Tools	ServiceNow, JIRA
Claims Processing Tools	Pareo, QNXT

PROFESSIONAL EXPERIENCE

ClarisHealth, TN

February 2023 – December 2024

Business Systems Analyst / Scrum Master

- Analyzed the business needs, existing work flows and worked with business stakeholders to define and document Requirements.
- Created clear, concise Business Requirement documentation, Business Process flows, Use Cases and Requirements Traceability Matrix (RTM).
Reviewed the system capabilities and collaborated with the Architects and Developers to define the logical and physical data models, data warehouse approach - how data is structured, defined and accessed.
- Collaborated with the business users and cross functional teams to understand & capture complex technical requirements in a comprehensible and cohesive manner.
- Collaborated with project stakeholders to provide status updates, track all open/outstanding issues to ensure successful delivery of the project.
- Supported HEDIS submissions and audit processes by validating data integrity and assisting with documentation and reporting.
- Worked with medical record review teams and vendors to ensure timely and accurate abstraction and submission of required HEDIS measures.
- Gathered and analyzed requirements for claims processing enhancements in payer systems (Facets, QNXT).
- Validated DRG assignments, modifiers, and documentation consistency with payer guidelines.
- Resolved complex claim denial issues by tracing adjudication logic within payer systems and recommending updates to provider contract configurations.
- Prioritizing work, Clarifying Urgency and Importance, Identifying Risks/Dependencies and tracking them to closure.
- Created and validated detailed technical specifications for complex data integrations as part of technical design. Collected, analyzed and tracked data trends, participated in data mining and facilitated recommendations for actions to improve existing processes.
- Documented Test cases, Test Plans, Test Scripts to support Integration testing and System end-to-end Testing.
- Reviewed the deliverables/artifacts with all the project stakeholders through all the cycles of SDLC.
- Facilitate scrum, develop/refine user stories, user acceptance test cases, manage product backlog, groom/size user stories and track deliverables.
- Managed large datasets using Google Sheets functions like VLOOKUP , INDEX/MATCH, QUERY and ARRAY FORMULA.
- Acted as liaison between business stakeholders, IT, and clinical teams to ensure alignment on HEDIS measure interpretations and data requirements.

- Providing functional guidance and support during Development, System Testing, User Acceptance Testing and Training.
- Leading and Mentoring team members.
- Reconciled conflicts, escalated issues / risks as necessary to ensure timely completion of project deliverables.

Educational Testing Service, NJ

January 2022 – December 2022

Sr. Business Analyst / Scrum Master

- Supporting the IBIS (Item Banking Information System) Application which enables wide variety of assessment development activities for ETS allowing to perform various tasks Quick / Full Search, Exporting data / reports to Excel, Previews etc.
- Gathering and Documenting Business Requirement Document and Technical Specification Document.
- Reviewing the design specifications with business partners and project stakeholders.
- Documented Test Cases, Test Plans to support end to end testing.
- Performing testing on the delivered features - Functional Testing, Unit Testing, Integration Testing, System Testing and Regression Testing.
- Facilitate Scrum, develop/refine user stories, groom/size user stories and track deliverables.
- Providing functional support during Development and Testing.
- Providing timely and quality solutions to assigned business and technical problems/ production issue.
- Involved in providing support to the day to day activities to ensure timely completion of Service Level Agreements (SLA).
- Leading and mentoring team members.
- Collaborated with Team to Identify root causes of recurring problems and implemented solutions in accordance with Standard Operating Procedure.
- Took responsibility of issues reported by the customers to ensure effective resolution and escalated them to the next level with relevant data as needed in a timely manner.
- Proactively monitored the operations of the production system and help in resolving any live problems detected/reported.
- Involved in managing the incident process to ensure issues are recorded, tracked, resolved, and follow ups are done in a timely manner.
- Maintained a high level of customer focus, sense of urgency and continuous communication on all interactions.
- Provided regular status updates, including wins/worries, through the reporting line/client personnel stakeholders keeping them apprised of status and resolution of the issue.
- Ability to multitask and prioritize while being able to manage commitments / deliverable.

Delta Dental, MI

November 2020 – December 2021

Sr. Business Analyst

- Prepared Business Requirements Documents, Functional Requirement Documents.
- Worked extensively with developing business rules engine enabling the business rules such as referral, prior authorization, eligibility, claims processing and billing essential.
- Utilized Agile Software Methodology using Scrum framework. Actively participated in creating the user stories and prioritizing user stories along with tracking of burn up, burn down charts to estimate sprint delivery
- Performed GAP analysis by performing the system analysis between the scheduling systems and documented the gap items.
- Conducted JAD sessions, meetings, workshops to gather requirements from various stakeholders and SMEs.

- Facilitated all Aspects of scrum framework, including product backlog, release backlog, sprint planning session, daily scrum meeting, sprint reviews and sprint retrospectives.
- Consolidated with stakeholders to streamline reporting procedures by integrating Google Sheets with other business intelligence tools, improving data accuracy and efficiency.
- Collaborated with cross-functional teams (clinical, IT, and payor partners) to define business requirements for HEDIS reporting and care gap closure initiatives.
- Analyzed claims, eligibility, and supplemental data to track and improve payor performance on key HEDIS measures
- Conducted variance analysis by comparing forecasted versus actual data, identifying trends and root causes that informed strategic business decisions.
- As scrum master communicated dependencies and potential risk to the completion of the sprints including resources, costs and systems.
- Created data mappings to transform the data according to business rules.
- Developed Test Cases for unit testing, prepared spreadsheet for testing criteria, including regression, positive and negative testing, process flow testing and screenshot for test results to complete expected and actual results.
- Prepared various diagrams by using MS Visio.
- Prepared documents for the wireframe and prepared a data dictionary for the same Managed testing for various functionalities using Quality Center tools.
- Worked closely with QA and Developers to clarify/understand functionality, resolve issues and provided feedback to nail down the bugs.
- Maintained a close and strong working relationship with teammates and management staff to achieve an expected QA result for the project team.
- Conducted project related Presentations periodically to the management and end users during various phases of Software Development Life Cycle SDLC.
- Conducted weekly meetings for deciding the Policies and Procedures to be followed while constructing new sites.
- Gathered high-level requirement for all the external projects in a release.
- Performed the requirement analysis, impact analysis and documented the requirements.
- Involved in the full HIPAA compliance lifecycle from GAP analysis, mapping, implementation, and testing for processing of Medicaid Claims.
Developing a single application to process data from multiple integration points, convert the data for reporting purposes and feed data into mainframe system to be compliant to reporting requirements.
- Performed Analysis on Data mapping between different data models.
- Involved in the full HIPAA compliance lifecycle from GAP analysis, mapping, implementation, and testing for processing of Medicaid Claims.
- Used different ad-hoc analysis, the Reports assist in defining strategy for each customer category. Informatics was used for ETL process and Business Objects.
- Created ICD-9-CM/ICD-10-PCS comparison document and dealt with DRGs.shift through CMS files.
- Documented ICD9 to ICD 10 mappings one to one/one to Many according to the GEM files from CMS with the functional and structural changes related to the conversion
- Able to understand and implement Processing ICD-9 ICD-10
- Worked on EDI transactions: X12,835, and 837 P.I to identify key data set elements for designated record set. Interacted with Claims, Payments and Enrollment hence analyzing and documenting related business processes

USAC, DC

January 2020 – October 2020

Sr. Business Analyst

- Attended Reliability meetings to escalate any high risk issues to the senior management for immediate attention.

- Key participant on a team responsible for migrating jobs (over 10k) running on a Legacy Platform to a New Platform. The New platform provided more visibility job monitoring and issue resolution.
- Worked with analytics and development teams in integrating a third-party processing and presentation tool into our production environment. As a result, the sales team was able to sign up 50+ clients to use this presentation tool. Recipient of the best product documentation award
- Created SOP's wherever necessary to ensure proper training is given to the Customer Service Representatives.
- Coordinate with state stakeholders on Medicaid Management Information System (MMIS) portal development.
- Coordinate with Subject Matter Expert (SME) on web portal development and business process flow.
- Performed different impact analysis session while enhancing the different functionality of Facets as per Facets migration business request.
- Involved in the analysis of the functional, technical specifications, data mapping document and conceptual diagrams.
- Extensively involved in the analysis on conversion of Claims and Members files from Legacy systems into Facets and to its downward PBM (Pharmacy Benefit Management) and other systems.
Planned & conducted JAD sessions and finalized Business Requirements & prepared Functional Specifications.
- Acted as a liaison between the Stakeholders, Developers, Subject Matter Experts (SME) and between internal and external organizations throughout SDLC to maintain swift communication and consistent documentation.
- Worked on closing the production tickets using Remedy.
- Worked with payor teams to define eligibility criteria, exclusions, and measure logic for new HEDIS or Stars-related initiatives.
- Collected and documented business and functional requirements from Quality, Clinical, and IT teams to support HEDIS reporting and audit readiness.
- Proficient in dealing with Medicare and Medicaid requirements to meet the CMS standards.
- Created Business requirements and discussed the impact with the cross-functional teams using JAD sessions.
- Maintained traceability to ensure all the Business Requirements are transformed into the Functional Requirements.
- Held Peer reviews within the team so everyone is aware of the changes and avoid any duplicate work effort and thus minimize cost over-runs due to rework and scope creep.
- Reviewed Technical Specification Documents (TSD) and made sure all the functional requirements are traced back to the construction level and provided sign-offs.
- Coordinated with the Data Support Team to provide data both to Dev and QA teams.
- Reviewed the Integration Results (Unit Test) and provide sign-off before the code can be moved from Integration to QA Environment.
- Reviewed Quality Test Cases (QTC's) and Quality Test Outputs (QTO's) with the QA team and provided sign-offs
- Tracked the defects using Clear Quest and held daily meetings to ensure their closure and to avoid jeopardizing the timelines.

Department of Aerospace Engineering, India

June 2016 – August 2019

Business Systems Analyst

- Led the initiative on process improvement by identifying and migrating jobs that were running on a specific server to distributed environment. This allowed to process jobs much faster, and ability to retire legacy servers.
- Defined process flow for Development team to automate manual executions

- Participated in the Scrum Cycle for requirement gathering and represented Data Operations in related Sprint stories.
- Worked with cross functional teams in order to establish comprehensive business and functional requirements and translate those requirements into software design specifications using various notations of UML.
- Developed test plans based on test strategy for Data Warehousing Application.
- Created and executed test cases based on test strategy and test plans based on ETL Mapping document.
- Conducted requirements analysis and performed GAP analysis.
- Preparation of technical specifications and Source to Target mappings.
- Extensively used SQL programming in backend and front-end functions, procedures, packages to implement business rules and security.
- Develop test deliverables (test plan, defect report, status report, etc.) and automate testing scenario design for various platforms.
- Created UAT test cases and scenarios based on Use Cases and made sure those UAT test cases meets the business requirements.
- Wrote Test Cases for ETL to compare Source and Target database systems.
- Interacted with senior peers or subject matter experts to learn more about the data.
Identified duplicate records in the staging area before data gets processed and conducted data validation testing.
- Actively involved in the requirements gathering sessions.
Tested the source and target databases for conformance to specifications.
- Conditional testing of constraints based on the business rules.
- Developed automated test scripts from manual test cases for Regression testing based on the requirement documents using Quick Test Professional / ALM.
- Defects identified in testing environment where communicated to the developers using defect tracking tool Mercury Test Director.
- Involved in testing scripts as part of the ETL process, automate the process of loading, pulling the data.
- Worked with ETL group for understating mappings for dimensions and facts.
- Extracted data from various sources like Oracle, flat files and SQL Server.
Extensively tested several Business Objects reports for data quality, fonts, headers & cosmetic.

Colt Technology Service, India

September 2013 – May 2016

Business Systems Analyst/ QA

- Analyzing and understanding Business Epics.
- Clarifying requirements which are not clear with Business Analyst.
- Collecting test data for requirements to perform testing.
- Analyze requirements to ensure testability, report gaps and discrepancies.
- Creating and executing test cases for GUI, Sanity, Smoke, Functional and Regression testing.
- Performed Peer review for testing related documents Test cases, Test Plan and Release summary document
Executing test cases and log defects in JIRA.
- Retest the scenarios post defect fix.
- Adding scenarios, test data and screen shots used for testing to Test Ready User Stories in JIRA.
- Prepared and present weekly status reports to management
- Played active role during daily scrum meeting and task planning as part of agile methodology
- Interacted with offshore team to share & provide required information on planned work items for the sprint.
- Internal review of user stories with management for scenarios/test data/screen shots prior demo.
- Participated in Sprint Demo sessions with business.

- Involved in giving KT to the new member of the team.
- Performed Integration testing of ACMP application.
- Well versed with Microsoft SharePoint to manage project related documents.
- Involved in writing complex queries in SQL Server.
- Involved in Functional Design review meetings.
- Participated in daily offshore & onsite meetings on daily task assignments.
- Involved in Sprint retrospective meetings scheduled at the end of each sprint.
- Involved in Planning & Product Backlog Grooming User Stories with Business Analyst and Team members.
- Participated in Defect Triage call to discuss open defects and Defect clarifications.
- Maintained Defect/Issues/Observations Tracking sheet.

Super Computer Education & Research Centre, India

July 2011 – August 2013

Business Analyst

- Understand business goals and business context and translated them into technical specifications
- Demonstrated experience defining impacts of conversions, business rules, and configuration decisions on downstream systems and interfaces.
- Communicated and interacted on a regular basis with the project manager and development team during different stages of the project.
- Worked in a shared services environment with understanding of SOA.
- Involved in web services concepts and support utilities, related database utilities. Demonstrated understanding and experience with ETL, Stored Procedures, and Queries.
- Involved in gathering requirements, identifying and preparing Use Case specification documents, creating Trace-ability matrix and tagging it in the Rational Requisite Pro.
Developed Use Case diagrams, business flow diagrams, Activity/State diagrams and Sequence diagrams using Rational rose so that developers and other stakeholders can understand the business process.
- Documented the Use Cases and Activity diagram worked on COTS Integration and Application Architecture design. Created and maintained workflow plans and business process flows using MS Visio 2013.
- Worked directly with software engineers to ensure clear communications on requirements and defect reports.
- Designed and developed scenarios based on business requirements.
- Developed requirements integrating E-R diagrams and designed the testing process flows.
- Followed the RUP methodology for the entire SDLC.
- Used the guidelines and artifacts of the Rational Unified Process (RUP) to strategize the implementation of Rational Unified Process effort in different iterations and phases (Inception, Elaboration, Construction and Transition) of the Software Development Life Cycle
- Involved in Manual Testing and UAT testing.
- Prepared BRDs (Business Requirement Documents), Functional requirement documents, supporting documents containing the essential business elements, detailed definitions, and descriptions of the relationships between the actors to analyze data requirements from Data ware house.
- Performed GAP analysis of business rules, business and system process
- Designed Activity, Sequence and process flow diagrams using MS Visio to simplify and elaborate certain selection and filter condition.
Documented requirement using Use Case analysis.
- Conducted JAD session, meetings, and information sessions to gather the requirements from the clients.
- Performed field-by-field mapping of interface between parent EMR system and downstream system.
