

ASHWIK KILARI

Baltimore, Maryland 21227 | akilari@workitmail.com | (314) 782-5971 | LinkedIn

SUMMARY

Data Analyst with 3 years of experience leveraging Python, SQL, and R to develop data pipelines, automate workflows, and deliver actionable insights across insurance and technology domains. Proficient in building ETL processes using tools like SSIS, Informatica, and Snowflake, and creating interactive dashboards in Tableau and Power BI to support strategic decision-making. Skilled in data wrangling, statistical analysis, and A/B testing, with hands-on experience working on cloud platforms such as AWS.

EDUCATION

University of Maryland, Baltimore County

Master of Science in Computer Science

Baltimore, Maryland

August 2022 – May 2024

Visvesvaraya Technological University

Bachelor of Engineering in Computer Science

Bangalore, India

August 2018 – June 2022

SKILLS

Methodologies: SDLC, Agile, Waterfall, A/B Testing

Language: Python, R, SQL

Data Warehousing: Snowflake, DataStage, SSIS, Informatica

IDEs: Visual Studio Code, PyCharm

Packages: NumPy, Pandas, Matplotlib, SciPy, ggplot2

Data Visualization: Tableau, Power BI, Advanced Excel, Descriptive and Inferential Statistics

Cloud Technologies: Amazon Web Services (AWS).

Database: MySQL, SQL Server, PostgreSQL, PL/SQL, MongoDB

Other Skills: Data Cleaning, Data Wrangling, Communication Skills, Presentation Skills, Problem Solving

Operating System: Windows, Linux, Mac (IOS)

EXPERIENCE

Allstate

United States

Data Analyst

January 2024 – Current

- Built and optimized SQL queries across Snowflake and SQL Server databases, extracting insights from 10M+ rows of policy and claims data to support risk analytics teams.
- Developed interactive dashboards in Tableau and Power BI, delivering real-time KPIs to track policy renewals, reducing reporting turnaround by 40%.
- Implemented ETL workflows using SSIS and Informatica, enabling daily ingestion and transformation of structured insurance data across internal systems.
- Conducted A/B testing and statistical analysis using Python and R to evaluate the impact of customer outreach campaigns, resulting in a 10% increase in response rates.
- Collaborated with cross-functional teams using Agile methodology, translating analytical findings into actionable business insights during sprint reviews.
- Cleaned and transformed semi-structured datasets using Pandas and NumPy, reducing data processing time by 30% for underwriting analysis.
- Utilized AWS S3 and EC2 for storing and running scalable analytics scripts, improving data availability and compute efficiency for quarterly reports.

Adons Softech

India

Data Analyst

January 2021 – July 2022

- Extracted, cleaned, and joined multi-source datasets using SQL and PL/SQL for monthly sales and customer churn analysis.
- Created 20+ data visualizations in Power BI and Tableau to support business reviews and product launch decisions, improving stakeholder engagement.
- Conducted data cleaning and wrangling operations on large datasets using Python and R, improving model performance and enabling scalable analytics workflows.

- Performed descriptive and inferential statistical analysis in R to analyze historical marketing performance, identifying key customer behavior trends.
- Wrote data validation and integrity checks in SQL and Python to identify anomalies in customer records, improving data quality by 95%.
- Migrated legacy reporting logic into Snowflake cloud warehouse, streamlining access and improving report query performance by 28%.
- Documented business rules and logic as part of the SDLC lifecycle, ensuring traceability and transparency across all analytics deliverables.

PROJECTS

Public Waste Management

- Developed interactive Tableau dashboards by integrating multiple datasets to analyze global waste trends, identify high-waste regions, and support data-driven environmental policies.

Yelp Polarity Sentiment Analyzer

- Developed and deployed a cloud-based Yelp sentiment analysis system using NLP and Logistic Regression (87.9% accuracy), with automated preprocessing and model benchmarking.

Analyzing and Predicting IPL Outcomes

- Developed predictive models in Python using statistical methods to forecast outcomes, improving prediction accuracy by 15%.

Uber Pickups Analysis

- Analyzed Uber pickup data using Python and Tableau to optimize driver allocation, reducing average wait times by 20%.

Wine Quality Detection

- Built a machine learning model in Python to predict wine quality, achieving 85% classification accuracy using Scikit-learn.
