

Ashwitha Vollem

Cincinnati, OH | +1 (513) 488 7214 | ashureddy1066@gmail.com

Education

University of Cincinnati

Master of Science in Information Technology

August 2023 – December 2024 | Cincinnati, USA

GPA: 4.0

Technical Skills

Programming: Java (Object-Oriented Design), Python, JavaScript, SQL
Backend Development: Spring Boot, Hibernate, Kafka, RESTful APIs, Microservices Architecture
Database Management: MongoDB, PostgreSQL, MySQL, MS SQL Server
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, Git (CI/CD Pipelines), GitHub Actions
Testing & Automation: JUnit, TestNG, Selenium WebDriver, JMeter, Cucumber
Methodologies & Practices: Agile (Scrum), Test-Driven Development (TDD), SOLID Principles
Web Technologies: HTML, CSS
Operating Systems: Unix/Linux

Experience

Software Engineer, Hermitage Info Tech LLC, Piscataway, NJ, USA

January 2025 – Present

- Developing and maintaining high-performance Java applications using Spring Boot, focusing on designing microservices-based architecture to improve scalability and modularity. Currently integrating Groovy for scripting and automation to streamline development workflows and enhance efficiency.
- Implementing Hibernate ORM and RESTful APIs to manage database interactions with MongoDB, optimizing real-time data access and ensuring seamless performance for ongoing projects.
- Contributing to Software Development Life Cycle (SDLC) processes by collaborating with business and technical teams to identify opportunities and deliver high-quality, cost-effective solutions that align with client requirements and service level agreements (SLAs).
- Configuring CI/CD pipelines using Jenkins, Gradle, and Maven to automate builds and deployments, while provisioning infrastructure with Chef and deploying applications on Cloud Foundry to support scalable and resilient systems.
- Enhancing security and operational insights by integrating HashiCorp Vault for sensitive data management and utilizing Splunk for log analysis, while managing version control with Git to ensure smooth team collaboration.

Software Developer Intern, MHAKECH, MI, USA

May 2024 – December 2024

- Designed and developed Java-based applications using Spring Boot, creating RESTful APIs to enable seamless payment operations. Ensured robust integration between frontend and backend systems by collaborating with team members to align technical implementations with business requirements.
- Configured and managed MongoDB databases for real-time transaction processing, implementing efficient data models and indexing strategies to support high throughput demands. Additionally, optimized PostgreSQL schemas with complex queries and leveraged Hibernate ORM, achieving a 25% improvement in data retrieval performance.
- Explored Kafka integration for event-driven workflows, working closely with senior developers to prototype real-time data streaming solutions for payment processing, enhancing system responsiveness and scalability for future scalability needs.
- Wrote comprehensive unit tests using JUnit and Mockito, achieving over 85% code coverage, and integrated them into Jenkins-based CI/CD pipelines for automated testing and deployment. Conducted performance testing with JMeter, identifying and resolving API bottlenecks, which reduced response times by 15% for an improved user experience.
- Operated in an Agile environment, actively participating in sprint planning, daily stand-ups, and code reviews with a team of five developers. Utilized Git for version control, managing feature branches and pull requests to maintain a clean codebase, while documenting API endpoints and database schemas to streamline team onboarding and production transitions.

Associate Software Engineer, Virtusa Consulting Services, Hyderabad, India

July 2020 – August 2023

- Developed and maintained Spring Boot microservices in a Test-Driven Development (TDD) environment, ensuring high-quality, scalable, and modular system architecture that supported critical business applications with improved performance and reliability.
- Followed SOLID principles and best coding practices to enhance code maintainability, refactoring complex modules to reduce technical debt and facilitate future enhancements by the development team.
- Implemented Kafka for real-time event streaming, enabling asynchronous data processing to improve system scalability. Designed producers, consumers, and topics to handle high-throughput workflows, ensuring efficient data synchronization across distributed systems.
- Containerized applications using Docker to standardize development and deployment processes, streamlining environment consistency and reducing setup times across multiple stages of the software lifecycle.
- Orchestrated deployments with Kubernetes and leveraged AWS services (EC2, S3, Lambda) to manage microservices, utilizing IAM roles for secure access control and CloudWatch for real-time monitoring of application performance and error tracking.
- Designed and executed automated test scripts using Selenium WebDriver and JUnit, increasing test coverage by 30% and minimizing manual testing efforts by automating repetitive validation tasks for web-based interfaces.
- Integrated test automation into Jenkins CI/CD pipelines and managed version control with GitHub, implementing branching strategies and conducting code reviews in an Agile environment with daily Scrum meetings to ensure timely delivery and maintain codebase integrity.
