

AVINASH DAKEY

.NET Developer

+1 (617) 466-9302 • avinashdakey4@gmail.com • Kansas, USA • [LinkedIn](#)

Professional Summary

Results-driven .NET Developer with 3 years of experience in full-stack development, specializing in .NET Core, C#, Angular, and cloud technologies (Azure & AWS). Adept at designing and developing scalable, high-performance applications with a strong focus on RESTful APIs, microservices, and CI/CD automation. Proven ability to optimize system efficiency, enhance security, and improve user experience. Passionate about delivering robust solutions in Agile environments while leading development initiatives.

Skills

Programming: C#, VB.NET, SQL, C, C++, Java (Basic), Python (Basic)

Back-End: .NET Core, ASP.NET, MVC 5, Entity Framework, LINQ, Web API, WPF, WCF

Front-End: Angular, JavaScript, TypeScript, HTML, CSS, jQuery, Bootstrap, AJAX, JSON, Knockout.js

Databases: SQL Server, MySQL, PostgreSQL, MS Azure

Cloud & DevOps: Microsoft Azure, AWS, Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions, Azure DevOps)

Development Tools: Visual Studio, Git, TFS, Postman, Swagger, American Eagle (CMS)

Software Development Methodologies: Agile, Scrum, TDD, SDLC, UML, Waterfall

Version Control: Git, TFS, Visual Source Safe

Experience

.NET Developer

Jan 2024 - Present

Citius Tech

USA

- Develop and maintain highly scalable, efficient, and performant web applications using .NET, C#, WPF, WCF, and Angular technologies.
- Experience in both front-end (Angular) and backend (C#, .NET) development, ensuring smooth integration and performance of full-stack applications.
- Established CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment time by 40% and improving automation.
- Collaborate effectively with cross-functional teams, including product owners, architects, tech leads, engineers, data modelers, and other stakeholders to deliver high-quality software solutions.
- Coordinated quality assurance efforts, including test case development, design reviews, code reviews, and test automation to ensure robust, reliable, and maintainable code.
- Conducted code reviews, unit testing, and automated integration testing, reducing post-deployment defects by 25%.

.NET Developer

Sep 2020 - Jun 2022

Hellinex Cloud

India

- Managed tasks in a sprint, reviewing the code of team members and ensuring first-time quality of code.
- Engineered RESTful APIs and web services using Spring Boot and integrated them into front-end applications, improving response time by 20%.
- Contributed to development processes agreed at the organization/client level and ensured that these were followed diligently in the project.
- Applied Test-Driven Development (TDD) and conducted thorough unit testing, reducing post-production defects by 35%.
- Generated user stories, translated user stories into technical specifications, and converted stories into working code.
- Followed modern agile-based development processes, including TDD-based unit testing, and guided the team to follow the same mandatorily.
- Spearheaded proof-of-concept (POC) development, enabling data-driven decision-making and improving software performance.
- Identified the challenges based on the requirements and initiated PoC's and feasibility studies.

Education

Masters: Computer Science

University of Central Missouri

Dec 2023

Warrensburg, Missouri

Projects

Advanced Database Systems – Cloud-Based Inventory Management System

Tech Stack: C#, .NET Core, SQL Server, Entity Framework Core, Azure SQL, HTML, CSS, JavaScript

- Designed and implemented a scalable inventory management system with an Azure-hosted SQL Server.
- Developed RESTful APIs for managing products, stock levels, and orders while integrating a responsive front-end with Bootstrap and JavaScript.

Impact: Reduced manual data entry errors by 40% through automated validation and improved query performance with optimized indexing, enabling real-time inventory tracking.

Advanced Operating Systems – Multi-Threaded Task Scheduler

Tech Stack: C#, .NET Core, Task Parallel Library (TPL), Windows Services, ASP.NET Core, Angular

- Developed a high-performance multi-threaded task scheduler using TPL to manage concurrent execution with priority-based scheduling.
- Implemented Windows Services for continuous background processing and built a real-time web dashboard with ASP.NET Core and Angular for monitoring and control.

Impact: Optimized CPU utilization by 30% with efficient thread pooling, ensuring low-latency execution of critical tasks.
