

SUMMARY

- Data analyst with 4 years of experience specializing in extracting, transforming, and analyzing large datasets across the healthcare, IT, and financial industries. Proven expertise in utilizing Python, SQL, and R for data manipulation and analysis, with a strong command of libraries such as NumPy, Pandas, Scikit-learn, and TensorFlow to derive actionable insights from complex data sets.
- Strong experience in data visualization and reporting using Tableau, Power BI, and Excel (VBA, Pivot Tables, Macros) to present actionable insights.
- Skilled in ETL processes, data warehousing, and big data technologies including AWS (Redshift, S3, Glue), Azure (Data Factory, Synapse), Hadoop, and Spark to manage and process large datasets.
- Built complex financial models using Excel, including pivot tables, SUMIFS, and VLOOKUP, to analyze and forecast key financial metrics such as revenue, expenses, and profit margins, enabling better decision-making for budgeting and financial planning.
- Deep understanding of business intelligence, data governance, and compliance standards (HIPAA, GDPR) with hands-on experience in EHR systems (Epic, Cerner), financial analytics, A/B testing and machine learning model deployment (Flask, AWS Lambda).
- Experience in developing data applications with Python in Linux/Windows and Teradata environments.
- Experience in developing cubes using Partitions, KPI's, and Perspectives, slow moving dimensions.

| <ul style="list-style-type: none"><li>• Optimized Medicare claims processing by implementing SQL-based data audits, Python-driven data cleansing scripts, and machine learning models for anomaly detection, reducing claims reprocessing time by 15% and improving claims accuracy by 20%.</li><li>• Designed and deployed SQL queries and Python-based ETL pipelines to extract, transform, and analyze 50M+ healthcare records, enabling the Aetna Medicare Product Tools &amp; Technology team to accelerate data-driven decision-making by 25%.</li><li>• Extracted, cleaned, and processed data from multiple relational databases using advanced SQL queries, optimizing query performance and improving processing efficiency by 30% to handle large-scale datasets more effectively.</li></ul> |                           |

- Developed automated reports and interactive Power BI dashboards, reducing manual reporting effort by 30 hours per month and enhancing visibility into patient eligibility, claims approvals, and provider performance.
- Designed and implemented interactive Tableau dashboards to track key performance indicators (KPIs) like healthcare utilization, cost reduction, and patient engagement, allowing stakeholders to make informed, real-time decisions.
- Applied R programming for predictive modeling and forecasting patient healthcare needs, which improved resource allocation and helped the company proactively address patient care requirements.
- Leveraged data analysis to identify high-risk patients, helping reduce hospital readmissions by 10% through targeted interventions and timely care strategies.
- Executed data integrity checks on 1M+ Medicare member records, utilizing AWS S3 for data storage, Python for anomaly detection, and SQL for validation, ensuring 99.8% data accuracy and compliance with CMS regulations.
- Developed machine learning models using Python (logistic regression, decision trees) to predict patient risk factors, enabling early intervention, and reducing hospital readmissions by 30%.
- Used Snowflake as the central data warehouse to store and manage large volumes of structured and semi-structured healthcare data, ensuring scalability, high performance for complex analytics and Optimized query execution by 40%.
- Implemented Azure Data Factory to orchestrate Extract, Transform, Load (ETL) processes for ingesting and transforming healthcare data from multiple sources.
- Employed Apache Spark for distributed data processing, enabling the analysis of large healthcare datasets, including patient claims and healthcare utilization data, improving processing speed and scalability by 40%.
- Ensured that all data analysis complied with healthcare regulations (HIPAA) by using SAS's secure data handling and reporting features, maintaining patient data confidentiality, and meeting industry standards.
- Participated actively in sprint planning sessions, ensuring project goals and deliverables were clearly defined and aligned with stakeholder needs for healthcare data analysis initiatives.

#### **Data Analyst | Wipro, India**

**Jul 2020 – Dec 2022**

- Led a financial project by implementing predictive analytics techniques, including linear regression and time-series analysis, which improved revenue forecasting accuracy by 20%, enabling better financial planning.
- Optimized decision-making by conducting comprehensive data analysis and visualization using Python (Pandas, NumPy) and SQL, leading to a 25% reduction in financial risk exposure through data-driven insights.
- Developed and deployed interactive Tableau dashboards that streamlined financial reporting workflows, reducing report generation time by 40% and enhancing stakeholder access to real-time insights.
- Engineered scalable data pipelines utilizing AWS Redshift and S3, enabling seamless integration of multiple financial data sources, which improved data processing efficiency by 30%.
- Streamlined financial planning processes by automating reporting tasks and creating user-friendly dashboards, improving overall efficiency by 15% and empowering stakeholders to make faster, data-driven decisions.
- Designed and deployed time-series forecasting models using Scikit-learn and ARIMA to predict quarterly revenue streams with 85% accuracy. Integrated models into Excel and Tableau for leadership forecasting reports, supporting strategic planning decisions.
- Identified key financial drivers and optimized pricing strategies using advanced statistical techniques like hypothesis testing, clustering, and ANOVA, contributing to a 15% increase in revenue growth.
- Automated ETL workflows with AWS Glue and SQL, accelerating data preparation by 30% and ensuring timely financial reporting with improved accuracy.
- Leveraged OLAP capabilities to perform time-based analysis, aggregating financial data by month, quarter, and year to identify trends, seasonality, and performance fluctuations, assisting in more accurate financial forecasting.
- Enhanced credit risk analysis by building machine learning models (scikit-learn), which increased predictive accuracy and reduced loan default rates by 18%, improving risk assessment efficiency.
- Implemented robust data validation and quality control measures, ensuring 99.5% data accuracy, leading to more reliable financial insights and compliance with regulatory standards.
- Leveraged Salesforce CRM data to analyze sales pipeline trends and optimize lead conversion strategies, contributing to a 15% improvement in forecast accuracy and revenue predictability.
- Utilized SAP HANA to build data models and perform advanced analytics, improving reporting efficiency and data-driven insights across finance and operations.
- Designed dynamic financial data visualizations using Matplotlib, enabling executive leadership to make data-driven decisions more effectively, enhancing strategic financial planning.
- Used Matplotlib to create line charts visualizing monthly and quarterly revenue trends, helping stakeholders easily identify patterns, seasonal fluctuations, and long-term growth trajectories.

#### **EDUCATION**

**Master of science in Data Science-** University of North Texas, Denton, Texas, USA.

**Bachelor of Technology in Mechanical Engineering-** JNTU, Hyderabad, India

#### **CERTIFICATION**

- **Microsoft Certified: Power BI Data Analyst Associate**
- **AWS Certified: Associate**
