SUMMARY

Data Analyst with 3+ years of experience specializing in data analysis, visualization, and reporting. Proficient in extracting actionable insights from large datasets, identifying trends, and improving decision-making processes. Expertise in SQL, Excel, Python, and Tableau, with a strong understanding of statistical methods and machine learning algorithms. Adept at working in cross-functional teams to deliver high-quality, data-driven solutions that drive business growth.

TECHNICAL SKILLS

Data Analysis & Visualization: Python (Pandas, NumPy, Matplotlib), R, SQL, Excel

Data Visualization Tools: Tableau, Power BI

Statistical Analysis: Regression Analysis, Hypothesis Testing, Time Series Forecasting

Database Management: SQL (Querying, Data Extraction, Database Management)

Data Cleaning & Preparation: Data Transformation, Preprocessing (Python, Excel)

ETL Processes: Data Integration, ETL Tools

Machine Learning: Supervised and Unsupervised Learning (scikit-learn)

Big Data Tools: Hadoop, Spark

Business Intelligence (BI): BI Tools for Metrics & Dashboards

Cloud Platforms: AWS (Amazon Web Services), Microsoft Azure

Monitoring Tools: Prometheus, Grafana, Google Analytics

Project Management Tools: JIRA, Trello, Asana, Monday.com

Soft Skills: Problem-Solving, Communication, Collaboration, Attention to Detail, Critical Thinking

PROFESSIONAL EXPERIENCE

UnitedHealth Group, CA, USA

Aug 2024 – Current

Data Analyst

- Led the analysis of large-scale datasets, using Python (Pandas, NumPy) for data cleaning, transformation, and exploration, resulted in a 15% improvement in clinical decision-making by identifying key performance indicators (KPIs).
- Developed and optimized complex SQL queries to extract, clean, and manipulate large datasets, which reduced data retrieval time by 20% and provided timely, accurate reports for senior leadership and operational teams.
- Designed and implemented interactive Tableau dashboards, visualizing real-time healthcare metrics, resulting in a 30% reduction in reporting time and providing stakeholders with actionable insights for better decision-making.
- Applied machine learning techniques (scikit-learn) to build models predicting patient outcomes, such as readmission risk, with 85% accuracy, contributing to more proactive healthcare strategies and reducing hospital readmissions.
- Conducted statistical analysis, including regression analysis and hypothesis testing, on patient satisfaction surveys, identifying key areas for improvement and leading to increase in patient retention and improvement in satisfaction scores.
- Automated repetitive data extraction and reporting tasks in Excel, using advanced functions (VLOOKUP, PivotTables, Macros) to streamline workflows, saving 12 hours per week and reducing human errors.
- Implemented advanced Python scripts to automate data transformation and integration, reducing data processing time by 40% and improving the efficiency of the ETL pipeline.
- Developed predictive models in Python to track healthcare cost trends, resulting in a 10% improvement in forecast accuracy and aiding finance teams in budget allocation and cost-saving strategies.

Mphasis, India

Mar 2020 – Dec 2022

Data Analyst

- Utilized Python (Pandas, NumPy) and SQL to clean, transform, and integrate data from multiple sources, improving data quality by 20% and minimizing reporting inconsistencies across business units.
- Built and maintained dynamic Power BI dashboards that tracked real-time performance metrics, significantly improving operational decision-making, and reducing reporting discrepancies.
- Leveraged Python for time-series forecasting, achieving 95% accuracy in predicting monthly sales and demand trends, which enabled the sales team to optimize inventory management and avoid stockouts.
- Conducted detailed exploratory data analysis (EDA) on customer data, uncovering actionable insights that led to a 10% increase in upsell opportunities and more targeted marketing campaigns.
- Created custom Excel reports, utilizing PivotTables, VLOOKUP, and Macros to deliver insights to management on a regular basis, reducing manual reporting time by 30% and improving reporting accuracy.
- Designed Python scripts for data cleaning and ETL processes, which reduced data processing times by 40% and allowed for more timely and accurate analytics.
- Collaborated with business teams to implement predictive models that improved customer segmentation, resulting in a 12% increase in customer satisfaction and a 5% decrease in churn rate.
- Developed statistical models using regression analysis and A/B testing to evaluate marketing campaign effectiveness, which helped increase ROI by 8% for targeted campaigns.

EDUCATION

Master of Science in Computer Science

Dec 2024

Campbellsville University, KY, USA

Bachelor of Technology in Computer Science

May 2021

Jawaharlal Nehru Technological University, Hyderabad, India
