

Ayushi Agrawal Data Analyst

Aglayushi0217@gmail.com | (901) 656-1415 | USA | [LinkedIn](#)

Summary

Data Analyst with strong expertise in data extraction, transformation, and visualization using SQL, Python, and R. Skilled in cloud-based ETL tools like AWS Athena, Glue, and Azure Data Factory, with experience designing efficient data pipelines and performing advanced statistical analyses. Proficient in creating interactive dashboards with Power BI and Tableau to deliver actionable business insights. Adept at collaborating in Agile environments, interpreting complex data, and driving data-informed decision-making to support organizational goals and improve overall performance.

Technical Skills

- **Languages & Tools:** SQL (Advanced with window functions, CTEs), Python (NumPy, pandas, SciPy), R (ARIMA time-series modeling)
- **Data Integration & ETL:** AWS Athena, AWS Glue, Azure Data Factory, Azure SQL, Power Query
- **Data Visualization:** Power BI (DAX, KPIs, drill-through reports), Tableau (Level of Detail calculations, parameter controls, drill-down)
- **Analytics:** Exploratory Data Analysis (EDA), cohort analysis, segmentation, hypothesis testing, correlation analysis, time-series forecasting, outlier detection
- **Methodologies:** Agile sprint collaboration, ETL pipeline design, fraud pattern detection, product feature usage analytics, requirements gathering, cross-functional teamwork, JIRA, Confluence

Professional Experience

Data Analyst, Anthem

05/2024 – Present | Remote, USA

- Collaborated with Fraud Investigation, Data Engineering, and Compliance teams in Agile sprints, using **JIRA** for task management and **Confluence** for documentation to define project scope and requirements for healthcare claims fraud analysis.
- Wrote complex **SQL** queries involving subqueries, INNER, LEFT, and FULL JOINS, window functions, and CTEs to extract, aggregate, and analyze claims data from large-scale relational databases, supporting fraud pattern detection.
- Processed multi-format data from hospitals, pharmacies, and providers using **AWS Athena, Glue, and Power Query** to create scalable ETL pipelines, enabling efficient data transformation and cleansing workflows.
- Conducted **exploratory data analysis** with **hypothesis testing, correlation, and visualization** on millions of claims records, identifying patterns that contributed to a 12% decrease in suspicious claims and improved fraud detection.
- Used **Python** (pandas, NumPy, SciPy, Matplotlib) for **time-series and cohort analysis**, using outlier detection techniques to find anomalies in claims data, significantly boosting the accuracy and effectiveness of fraud detection models.
- Developed **interactive Power BI dashboards** featuring slicers, drill-through reports, and real-time KPI alerts, leveraging advanced DAX measures to calculate fraud risk scores, increasing fraud detection efficiency by 15%.

Data Analyst, V B Technologies

05/2022 – 06/2023 | Bhopal, India

- Collected user interaction data from product logs and app analytics by collaborating with Product, Engineering, and Agile teams. Joined in requirement gathering sessions to define analysis goals and improve product features based on user behavior insights.
- Extracted and optimized data using **SQL, Azure Data Factory, and Power Query** for ETL workflows. Leveraged **Power Query** for data transformation and cleansing in **Excel** and **Power BI**, enabling rapid prototyping and ad hoc analysis. Sourced data from **Azure SQL databases** and app telemetry, ensuring seamless integration and reliable data pipelines to support ongoing analysis.
- Performed **cohort analysis** and feature adoption studies using behavioral segmentation to track user engagement trends and drop-off points. Identified critical phases impacting customer retention and product satisfaction.
- Utilized **Python** with Pandas and NumPy to clean, manipulate, and analyze large-scale usage datasets. Conducted statistical computations and prepared data for predictive modeling and advanced visualization.
- Applied **R programming** to conduct time series analysis with **ARIMA models**. Forecasted feature usage trends and evaluated the long-term effects of new product functionalities on user engagement.
- Developed interactive **Tableau dashboards** featuring parameter controls and drill-down capabilities. Implemented Level of Detail (LOD) calculations to provide detailed insights on feature adoption and correlate usage patterns with customer retention metrics.

Jr. Data Analyst, V B Technologies

05/2021 – 04/2022 | Bhopal, India

- Assisted in collecting and cleaning product usage data from app logs by collaborating with Product and Engineering teams. Participated in requirement-gathering sessions to better understand user behavior and improve feature analysis.
- Wrote basic **SQL queries** to extract data from **Azure SQL databases**. Supported the maintenance of ETL pipelines using **Azure Data Factory** to ensure data accuracy for reporting and analysis.
- Conducted **cohort analysis** and usage trend studies under the guidance of senior analysts. Utilized **Python** libraries such as Pandas, NumPy, and Matplotlib for data manipulation, visualization, and initial statistical analysis.
- Created simple **Tableau dashboards** with interactive filters and drill-down capabilities to visualize feature adoption. Applied Level of Detail (LOD) calculations to deliver deeper insights into user engagement and retention metrics.

Education

Master of Science in Business Intelligence & Analytics

09/2023 – 05/2025

Stevens Institute of Technology, NJ, USA

Bachelor of Technology in Electronics & Communication Engineering

08/2019 – 07/2023

University Institute of Technology RGPV, Madhya Pradesh, India
