Summary

Detail-oriented Data Engineer specializing in designing and optimizing ETL pipelines, and utilizing Snowflake for efficient data management. Proficient in data modeling, SQL query optimization, and maintaining data integrity to support business intelligence initiatives. Strong collaborator with cross-functional teams, delivering actionable insights and innovative data solutions. Committed to continuous learning and applying best practices in data engineering to drive organizational success.

Skills

- Programming languages: Python, Java, SQL
- Cloud & Data Technologies: Azure (Synapse, SQL Server, Azure Blob storage), Snowflake, MySQL
- ETL and Data Processing: SQL-based data transformations, aggregations, and joins
- Big Data Technologies: Apache Spark, Hadoop, Hive
- CI/CD: Apache, Git, Github, Jenkins, JIRA.
- Data Visualization and Reporting: Power BI, Tableau
- Operating Systems: Windows, Linux.

Experience

Avasa IT Solutions

Jan 2024 - Nov 2024

Data Engineer

- Designed and implemented ETL pipelines to extract, transform, and load data from multiple sources into Snowflake and Azure Blob Storage.
- Designed and implemented scalable data pipelines using Python and Apache Spark, enhancing data processing speed by 30%.
- Collaborated with data scientists and analysts to gather requirements and optimize data workflows for business intelligence initiatives.
- Developed and optimized SQL queries for data extraction, significantly improving query performance.
- Conducted data quality checks and implemented validation rules within ETL processes to ensure data integrity.
- Automated data validation routines using Python to reduce manual QA effort by 40%.
- Developed reusable Python scripts for data ingestion, error logging, and job monitoring.
- Integrated Snowflake with Power BI to support real-time analytics and executive dashboards.
- Built parameterized pipelines in Azure Data Factory for flexible data processing across environments. Led code reviews and participated in Agile sprint planning to align with team goals and delivery timelines.

May 2021- Dec 2023

Junior Data Engineer

- Created automated ETL jobs using Talend and Python to streamline data ingestion and processing. Developed interactive dashboards and reports using Power BI.
- Developed and maintained documentation for data workflows and ETL processes to ensure knowledge transfer and consistency.
- Created data visualizations and dashboards using Power BI, enabling stakeholders to gain insights into key performance metrics.
- Participated in performance-tuning activities for SQL queries and ETL jobs to enhance system efficiency.
- Optimized existing databases for better performance by indexing columns or rewriting queries.
- Engaged in data modeling discussions to create optimized schemas that align with business requirements.
- Optimized existing databases for better performance by indexing columns or rewriting queries.
- Supported migration of legacy systems to cloud-based data warehouse platforms.
- Built data dictionaries and lineage documentation to improve discoverability and compliance.
- Assisted in setting up CI/CD pipelines for ETL code using Git and Azure DevOps

Education

Master of Science: Computer Science -University of Bridgeport

Bachelor of Science: Computer Science -Vignan's University

Certifications

- SnowPro Core Certification
- Microsoft Azure Data Engineering Associate (DP-203).
- Microsoft Azure Fundamentals (AZ-900)
