

Bhanu Korrapati

Data Scientist

✉ bhanu.k@mymailkeeper.com ☎ (940) 977-5009 📍 Albany, Newyork [in](#) [LinkedIn](#)

PROFESSIONAL SUMMARY

- Data Scientist with 4+ years of experience, specializing in machine learning, deep learning, and statistical modeling to extract actionable insights from large datasets. Proficient in tools like Python, R, SQL, PyTorch, TensorFlow, and Scikit-learn, with a strong track record of delivering data-driven solutions to complex business challenges.
- Leveraged deep learning expertise to implement advanced architectures, like Artificial Neural Networks, Convolutional Neural Networks, and Recurrent Neural Networks with LSTMs, solving problems and driving impactful solutions.
- Skilled in leveraging NLP techniques to extract valuable insights from textual data, including text classification, sentiment analysis, and topic modeling, to inform business decisions.
- Proven data visualization and statistical analysis expertise, enabling data-driven decision-making for business intelligence initiatives using Tableau and Power BI.

EDUCATION

Master of Science in Information Systems and Technologies

University of North Texas, Denton, TX

SKILLS

Languages and IDE's: Python, R, SQL, NoSQL, Jupyter Notebook, Google Colab

Machine Learning: Linear, Logistic Regression, Decision Trees, Random Forests, Naive Bayes, SVM

Deep Learning: CNN, ANN, RNN, LSTM, LangChain, Hugging Face Transformers (BERT, GPT-3), Natural Language Processing (NLP), Large Language Model (LLM)

Cloud and Visualizations: AWS (S3, RedShift, Lambda, Glue, SageMaker), Azure (Data Factory, Data Lake), Tableau, Power BI

Statistical Techniques: Hypothesis Testing, Data Visualization, Data Modelling, A/B testing, Model Evaluation

Packages and Frameworks: NumPy, Pandas, Matplotlib, Scikit-learn, Seaborn, TensorFlow, Keras, NLTK, XGBoost, PyTorch

Database: MySQL, PostgreSQL, MongoDB, SQL Server

EXPERIENCE

Capital One Financial

Jan 2024 – Current

Data Scientist

Texas

- Engineered predictive models utilizing Python libraries (NumPy, Scipy, pandas, Scikit-learn) and Spark, resulting in an average accuracy enhancement of 20% across all models, revolutionizing data-driven decision-making processes.
- Implemented LLMs (BERT) to improve search functionality within the document repository, boosting search accuracy by 20% through domain-specific fine-tuning
- Leveraged AWS EMR to create highly scalable machine learning pipelines, capable of handling training datasets exceeding terabytes in size and achieving faster model deployment times
- Utilized Python libraries like scikit-learn to develop and train a churn prediction model, achieving an accuracy of 10%, identifying customers at risk of churning, and allowing for targeted interventions and improved retention strategies.
- Enhanced machine learning model robustness by leveraging LangChain to create a data augmentation pipeline, generating synthetic data that improved model performance by 25% and effectively addressed data scarcity challenges.
- Optimized maintenance operations by ad-hoc SQL queries to analyze historical data, resulting in a 20% decrease in maintenance costs by implementing scheduling strategies.

Dixon Technology

Oct 2019 – Nov 2022

Data Scientist

India

- Implemented an XGBoost model for time series forecasting, achieving high accuracy in predicting future sales trends, which enabled data-driven inventory management decisions and reduced holding costs by 20%.
- Optimized the efficiency of legal document review through an innovative NLP-based solution system that performs named entity recognition and extracts key information, streamlining the legal review process.
- Utilized marketing campaign performance through data-driven decision-making. Conducted A/B testing and analyzed results to identify the most effective campaign variations, leading to an increase in click-through rates.
- Initiated anomaly detection models using statistical and machine learning techniques to identify outliers and anomalies in large-scale datasets, leading to a 40% reduction in false positives and an improvement in anomaly detection accuracy.
- Constructed data cleaning and transformation pipelines using SQL queries and PostgreSQL functions to ensure data quality and consistency, improving data analysis accuracy by 80%.
- Integrated Azure Cognitive Services for natural language processing tasks, achieving a 15% improvement in sentiment analysis accuracy for customer feedback.
- Created Power BI dashboards utilizing Power Query for data cleansing and transformation, DAX for complex calculations, and a diverse range of visualizations to uncover actionable insights and inform strategic decision-making.
