Professional Summary

Results-driven QA Automation Engineer with 3+ years of experience in designing, developing, and executing scalable automation frameworks for web, mobile, and API testing. Hands-on expertise in Selenium, Playwright, REST Assured, Jenkins CI/CD, and Kafka-based microservices. Proven record of reducing regression cycles, improving test coverage, and enabling continuous delivery through shift-left testing practices in Agile environments.

Skills

Automation Tools & Frameworks: Selenium WebDriver, Playwright, Cypress, Cucumber (BDD), TestNG, JUnit, REST Assured, Postman, SoapUI

Programming Languages: Java, JavaScript, Python, SQL

Performance & Load Testing: JMeter, LoadRunner

CI/CD & DevOps: Jenkins, Git, Maven, Gradle, Docker, Kubernetes, AWS (EC2, S3), GitHub Actions

Test Management & Defect Tracking: Jira, TestRail, HP ALM, Bugzilla, Confluence, Radar

Databases: MySQL, PostgreSQL, SQL Server

Methodologies & Practices: Agile (Scrum/Kanban), Shift-Left Testing, TDD/BDD, SDLC, STLC, Microservices Testing, Cloud Testing

Soft Skills: Analytical Thinking, Problem-Solving, Collaboration, Adaptability, Communication

Work Experience

Client: Apple, Sunnyvale, CA

Role: Software QA Engineer

Jun 2025 - Present

- Led automation testing for enterprise-grade rule engine and event-driven systems, achieving 95% test coverage and 70% reduction in manual regression effort.
- Designed Playwright + REST Assured frameworks integrated with Jenkins CI/CD, enabling full-suite execution across Dev, UT, IT, Test, and Prod.
- Built data-driven, modular test suites for rule validation and Kafka event monitoring, improving scalability and maintenance efficiency.
- Automated complex event-reprocessing validation for Kafka consumer groups and correlation views, cutting downtime detection by 40%.
- Developed mock data generation utilities handling 5M+ records, optimizing test reusability and data reliability.
- Integrated Allure dashboards and CI pipelines to deliver real-time defect visibility and reduce release validation from 3 days → 4 hours.
- Conducted validation of Splunk logs, API metrics, and event payloads for early anomaly detection, reducing MTTD/MTTR by 40%.
- Partnered with developers, DevOps, and SAs to stabilize CI/CD, debug flaky builds, and maintain seamless automation integration across distributed microservices.
- Contributed to shift-left test adoption, integrating smoke suites into PR pipelines and enforcing code quality gates for early defect detection.

Client: Athenahealth, Boston, MA

Role: Member of Technical Staff (Software Test Engineer)

Aug 2024 – May 2025

- Spearheaded automation for Athena's healthcare SaaS platform, covering patient management, billing, and scheduling workflows.
- Built Selenium-Cucumber (BDD) framework with Java, TestNG, and Jenkins, increasing regression coverage by 30%.
- Developed REST Assured API test suites validating 150+ endpoints, ensuring stable integration between EMR and billing systems.
- Performed UI, API, and database validation across multi-tenant environments; optimized data creation scripts for reliable test setups.
- Enhanced CI feedback loops using Jenkins + Allure dashboards, improving defect traceability and build reporting transparency.
- Conducted cross-browser tests using Selenium Grid & Docker, improving release confidence for Chrome, Edge, and Safari.
- Collaborated with product owners and developers during sprint grooming and story refinement to strengthen acceptance criteria.
- Mentored QA peers in writing BDD scenarios, refactoring step definitions, and adopting CI/CD-based validation.
- Led post-release validation efforts, reducing escaped defects by 25% and improving release predictability.

Application Development Analyst: Accenture - Hyderabad, India

Client: Virgin Media

Mar 2021 - Dec 2022

- Led automation initiatives for a large-scale telecom SaaS platform, developing a hybrid Selenium + TestNG + Page Object Model framework, reducing regression cycle time by 40%.
- Automated 1,000+ web and mobile test cases using Java, Selenium WebDriver, and Perfecto Cloud, enhancing cross-platform coverage and improving defect detection by 20% in production.
- Integrated automation suites into CI/CD pipelines with Jenkins, Maven, and Git, enabling nightly builds and early bug detection across multiple test environments.
- Performed API and web service validation using Postman, SOAP UI, and Karate, improving end-to-end service reliability and reducing API defects by 25%.
- Collaborated with product owners, developers, and release teams to ensure sprint deliverables were test-ready, achieving 95% test coverage for high-priority features.
- Developed reusable utilities for test data creation, log extraction (via WinSCP, Putty, Kibana), and validation—streamlining triage and debugging processes.
- Executed performance baseline tests using JMeter, identifying key bottlenecks and improving system response times by approximately 15%.
- Managed end-to-end functional, regression, and exploratory testing across web and mobile apps, eliminating over 500 hours of manual testing annually.
- Tracked and resolved 300+ defects per release using JIRA and ALM, maintaining an average defect turnaround time of 3 days and ensuring timely sprint closures.
- Prepared detailed test documentation—test plans, test scenarios, daily status reports, and closure summaries—enhancing transparency and stakeholder alignment.

Education

University of Central Missouri (Missouri, United States)

Jan 2023 - Dec 2024

Master of Science in Computer Science

Jawaharlal Nehru Technological University (Hyderabad, India)

Aug 2016 - Sep 2020

Bachelor of Technology in Computer Science
