SUMMARY

5 years of experience in Java Full Stack Development, specializing in building secure, scalable, and cloud-native microservices architectures for enterprise applications. Expertise in designing and deploying distributed backend solutions using Java 8/11, Spring Boot, Spring MVC, Hibernate, Kafka Streams, and JMS-based integrations. Proficient in AWS cloud engineering with hands-on experience using ECS, S3, Lambda, CloudWatch, and IAM to support high-performance and resilient deployments. Developed responsive Single Page Applications (SPAs) using Angular (2–12), ReactJS, Bootstrap, and jQuery to enhance user experience and application accessibility. Strong background in RESTful and SOAP API design with secure access enforcement through OAuth 2.0, JWT, and API Gateway routing for cross-platform interaction. Implemented real-time event streaming and alerting mechanisms using Kafka, ActiveMQ, and WebSphere MQ to improve system responsiveness and reliability. Extensive experience with CI/CD automation using Jenkins, Docker, Kubernetes, Maven, and Git for streamlined delivery pipelines and zero-downtime releases. Delivered scalable data persistence layers using MongoDB, Cassandra, Oracle, and MySQL with query optimization, indexing, and performance tuning. Designed application observability using Elasticsearch, Spring Boot Actuator, AppDynamics, and CloudWatch to proactively detect failures and enhance uptime. Automated batch processing and evaluation workflows using UNIX shell scripting, AutoSys, SQL, and Cucumber-based BDD testing for operational efficiency. Adhered to software engineering best practices including SOLID principles, TDD/BDD, clean code, and peer code reviews to ensure maintainability and quality. Collaborated in Agile environments with cross-functional teams, participating in sprint ceremonies, backlog refinement, and architectural decision-making for product delivery success.

WORK EXPERIENCE

March 2024–Current

Java Full Stack Developer

🏢 Holman
📍 Jersey City, New Jersey, United States

Designed and deployed highly scalable microservices using Java 8, Spring Boot, Kafka Streams, Cassandra, and MongoDB, supporting seamless processing across distributed enterprise applications. Automated build and deployment workflows with Linux Shell Scripting, Jenkins, and BDD using Cucumber, improving delivery automation and governance. Strengthened monitoring, resilience, and diagnostics using Spring Boot Actuator, ActiveMQ, and Elasticsearch, enhancing operational stability across cloud environments. Built and secured RESTful APIs running on AWS ECS and Docker, delivering UI assets via AWS S3, and enabling protected access with JWT, OAuth 2.0, and CORS controls. Developed responsive React and Angular front-end components integrated with Node.js (Express), AJAX, Axios, and observables for real-time data interactions. Configured Kubernetes StatefulSets to maintain persistent workloads and ensure highly available production deployments. Modernized legacy SOAP and REST integrations by introducing Spring Zuul API Gateway and Eureka Service Discovery, improving routing and service orchestration in hybrid architectures. Implemented centralized configuration and secure secrets management with Spring Cloud Config and AWS Parameter Store, ensuring

consistent deployment integrity across development stages. Improved service performance and reliability by integrating Redis caching and applying Circuit Breaker patterns through Resilience4J.

March 2023-April 2024

Java Full Stack Developer

 Synechron
 New Jersey, United States

Modernized legacy enterprise platforms into scalable Spring Boot and Spring MVC driven microservices, deployed on PCF to support modular growth and resilient cloud operations. Developed and secured REST APIs using Jersey, JSON, and XML, ensuring consistent data orchestration across business applications and partner systems. Built modern user workflows using React, Angular, Bootstrap, and custom drag-and-drop components to elevate usability and streamline digital processes. Delivered operational intelligence dashboards using Ext.js and Socket Stream, enabling actionable insights and enhanced decision-support capabilities. Automated CI/CD delivery pipelines with Jenkins, Maven, Git, and Kubernetes, improving software release governance and deployment continuity. Enabled reliable asynchronous messaging integrations through Kafka and JMS, strengthening event notification and backend communication layers. Transitioned critical repositories from SVN to GitHub, aligning source-control management using Git, CVS, and automated build pipelines for continuous integration. Engineered backend persistence logic leveraging Hibernate, DAO patterns, and MySQL, supporting robust transactional processing and scalable data management.

November 2021-November 2022

Java Developer

 S&P Global
 Mumbai, India

*Roles & Responsibilities:

*Transitioned monolithic modules into Spring Boot, REST API driven microservices, improving agility in system deployments.

*Managed cloud infrastructure monitoring using AWS CloudWatch and implemented AWS Lambda for event-driven automation.

*Automated recurring operational workloads using AutoSys, UNIX Shell scripting, SQL, and Core Java to support critical reporting cycles.

*Developed reusable UI components using React.js, Redux, and Bootstrap, optimizing long-term maintainability of front-end features.

*Utilized Hibernate ORM, Oracle, and Node.js based integrations for secure CRUD operations and database interactions.

*Built scalable backend modules using Spring MVC with seamless UI-to-API data flows.

*Extended internal tooling using Angular 2, while resolving UI defects with HTML5, CSS3, and JavaScript in cross-browser environments.

*Streamlined data synchronization using MySQL, NetBackup, and cloud-aware logging for production monitoring in AWS hosted services.

*Improved service reliability and latency by introducing Kafka and asynchronous messaging with REST event callbacks, reducing processing delays during peak load.

*Strengthened SDLC quality by implementing JUnit, Mockito test automation into CI workflows to increase coverage and prevent regressions.

March 2020-October 2021

Java Developer

 Hindustan Construction Company Ltd

 India

*Roles & Responsibilities:

*Designed robust data persistence using Hibernate, DAO patterns, and validation services in enterprise Linux deployments.

*Streamlined delivery pipelines with Git, Nexus, Jenkins, Maven, and Docker on AWS, enhancing development throughput and release alignment.

*Built secure backend modules using Spring Boot, Spring Security, and Spring JDBC, supported by AppDynamics monitoring on PCF workloads.

*Developed Angular-based SPAs with HTML5, CSS3, and modern JavaScript, supporting enhanced digital interaction capabilities for business teams.

*Created complex reporting layouts using Jasper Reports, facilitating executive-level data insights.

*Established reliable messaging channels using JMS, WebSphere MQ, and MDBs to integrate legacy and modern components.

*Delivered full-stack development using Java, JSP, Oracle, and IntelliJ, optimizing core business workflows.

*Actively contributed within Agile teams, aligning architecture decisions with Spring MVC, IoC, and transaction management best practices.

*Improved resiliency and load handling through Redis caching and asynchronous processing, reducing database bottlenecks in peak traffic.

*Enhanced application observability using Log4j2, Splunk, and performance profiling tools to ensure SLA compliance in production environments.

EDUCATION

-2024

Master of Science in Computer Science

 Pace University

 New York, New York, United States

Master of Science in Computer Science | Pace University, New York, USA

SKILLS

Java Spring MVC REST (Representational State Transfer) JSON XML (EXtensible Markup Language)

Bootstrap Ext JS JavaScript Library Sockets Maven Git Java Message Service (JMS) Subversion

GitHub Hibernate MySQL Amazon Web Services (AWS) AWS Lambda

CA Workload Automation AE (AutoSys Edition) Unix Shell Programming SQL (Structured Query Language)

React.js Apache Cassandra MongoDB Linux Operating System Jenkins Apache ActiveMQ

Elasticsearch Docker Amazon Simple Storage Service (S3) OAuth AngularJS Node.js

AJAX (Asynchronous JavaScript and XML) Application Programming Interface (API) Cloud Computing Redis
Software Engineering Test Automation Apache Kafka Scalable System Development HTML5
