CAREER SUMMARY

Results-driven Information Systems graduate with hands-on expertise in network administration, cybersecurity, cloud technologies, and automation. Certified in CompTIA A+ and Network +, CCST Networking, OCI Generative AI and Networking Professionals, with practical skills in deploying AI-driven security, optimizing network infrastructure, and safeguarding cloud and enterprise environments. Experienced in routing protocols (BGP, OSPF), SD-WAN, secure firewall management (Palo Alto), network automation using Python, and cloud networking solutions (AWS, OCI). Proven ability to monitor, analyze, and mitigate threats leveraging Splunk, Wireshark, OSSEC, and Snort.

EXPERIENCE

ValourUSA, Texas

Apr 2025– Present

Network Analyst

- Monitor and analyse real-time network traffic using Wireshark and Splunk to identify, investigate, and respond to emerging security threats, applying advanced network troubleshooting and traffic analysis skills.
- Strengthen network defences by configuring and managing routers, switches, VPNs, and firewalls, utilizing knowledge of secure routing, switching, and network segmentation to improve overall security and performance.
- Conduct daily network and security audits, documenting incidents to ensure regulatory compliance and support incident response efforts.
- Leverage skills in cloud networking, hybrid architecture design, and security policy enforcement for both on-premises and cloud environments.
- Collaborate with IT teams to optimize network performance, support deployment of SD-WAN technologies, and implement intrusion detection/prevention systems for robust protection.

EDUCATION

University of North Texas Denton, USA

Dec 2022 – Dec 2024

Master's in Information Systems and Technology

Lovely Professional University, Punjab, India

Jun 2018 – May 2022

Bachelor's in Computer Science and Engineering

PROJECTS

- **Real-Time Monitoring with OSSEC**
I implemented OSSEC to monitor system activity in real-time, which helped improve security by detecting unauthorized changes and triggering alerts promptly. This allowed for quicker identification of vulnerabilities and enhanced overall network protection.
- **Crimes in the USA**
For this project, I analyzed crime data across different states using Tableau, creating interactive visualizations that told a compelling story about rising crime trends. It helped me understand how data can be used to uncover underlying factors contributing to social issues.
- **Learning Management System (LMS)**
I developed a user-friendly web application for managing courses and user authentication using ASP.NET. The project involved designing a robust database and smooth interface to ensure secure and efficient course management for students and instructors.
- **CR7 Store Website**
This capstone project was an e-commerce website where users could browse products and complete purchases securely online. I focused on creating an intuitive interface and integrating secure payment systems, enhancing both usability and safety.
- **IDS/IPS Implementation with Snort**
I set up Snort to monitor network traffic and detect malicious activities in real time. By tuning detection rules and integrating with security monitoring tools, I helped improve the accuracy of threat detection while minimizing false alarms.

TECHNICAL SKILLS

Networking: LAN/WAN design and maintenance, TCP/IP, OSI Model, BGP, iBGP, OSPF, IPSEC, SD-WAN, routing, switching, VLANs, network segmentation, fiber optic and cabling management, VPNs, firewall administration.

Cloud Platforms: AWS, Oracle Cloud Infrastructure (OCI).

Security & Monitoring: IDS/IPS (Snort, Suricata, OSSEC), SIEM (Splunk, Microsoft Sentinel), vulnerability assessment, incident response, compliance frameworks.

Automation & Scripting: Python, Ansible, Terraform, Bash scripting.

CRM: Salesforce

Wireless Technologies: Cisco Wireless Controllers, Aruba wireless solutions, Network Access Control (NAC).

Programming: Python, C, SQL

Web Development: ASP.NET, HTML, CSS, API Development

Database Management: MySQL, Microsoft SQL Server, NoSQL

Operating Systems: Linux (Ubuntu), Windows, Microsoft 365

Version Control: Git, GitHub

Visualization Tools: Tableau, Power BI

AWARDS & CERTIFICATIONS

- CompTIA A+(v1 & v2), CompTIA Network (In Progress)
- CCST(Networking)
- OCI Generative AI Professional
- OCI Networking Professional
- Google Cybersecurity Professional Certificate
- Google IT Support Professional Certificate
- Published a Research Paper on IJRCT Publication Certificate (PAPER ID: IJCRT2204626) IMPACT OF CYBERSECURITY IN DIFFERENT APPLICATIONS ON E-GOVERNANCE- 7.97 Impact Factor.
