SUMMARY

Results-driven Full Stack Developer with **5+ years of experience** designing, developing, and deploying scalable web applications using Java, Spring Boot, Angular, and MySQL. Proficient in building RESTful APIs, implementing secure authentication flows, and delivering responsive frontends with dynamic data handling. Skilled in containerization, CI/CD automation, and database optimization, with a strong understanding of agile methodologies. A collaborative team player known for writing clean, maintainable code and solving complex technical challenges in cross-functional environments.

SKILLS

Programming Languages: Core Java, Java 8/11, JavaScript, TypeScript, SQL, HTML, CSS, Python, .Net
Backend Development: Spring Boot, Spring MVC, JPA/Hibernate, Spring Security, Spring Batch, RESTful APIs, JDBC, Servlets, JSP, Apache Kafka, WebSockets, Node.js, Express.js
Frontend Development: React.js, Angular, Angular Material, Thymeleaf, Bootstrap, Charts.js
Databases: MySQL, PostgreSQL, Stored Procedures, Triggers, Views, Indexing, SQL Joins, Query Optimization
Build & Dependency Management: Maven, Gradle, npm, yarn
DevOps & CI/CD: Docker, GitHub Actions, Jenkins, Git, GitHub, Apache Tomcat, Nexus Repository, SonarQube, Postman
Testing & Documentation: JUnit, Mockito, TestNG, REST Assured, Swagger/OpenAPI, Unit Testing, Integration Testing, Log4j, SLF4J
Security & Auth: Spring Security, OAuth2, JWT, HTTPS, CSRF/XSS Protection, Role-Based Access Control (RBAC), Encrypted Sessions
Architecture & Patterns: Microservices Architecture, Monolithic Architecture, MVC Pattern, DAO Pattern, Singleton, Factory, Builder
Project Management & Methodologies: Jira, Agile, Scrum, CI/CD Pipelines, Version Control

EXPERIENCE

Morgan Stanley, USA | Full Stack Developer

Jan 2025 to Present

- Architected and deployed microservices using Spring Boot and Java 11 to streamline alert generation, integrating real-time data streams from credit bureaus and dynamically filtering notifications based on user preferences.
- Transformed the Alerts Dashboard with React.js and TypeScript using a component-based architecture, ensuring responsive design and real-time updates via WebSocket communication between frontend and backend services.
- Collaborated with cross-functional Agile teams to enhance user interaction by implementing Redux-managed state updates for smooth sorting, filtering, and real-time handling of credit-related events.
- Fortified backend services using Spring Security, OAuth2, JWT, and HTTPS; implemented rate limiting, encrypted sessions, data masking, and ensured compliance with financial data protection regulations.
- Automated end-to-end testing and deployments using CI/CD pipelines (GitHub Actions, Jenkins), Docker containers, and Maven for consistent builds and error-free multi-environment releases.

Texas Tech University, USA | Software Developer

Jan 2024 – Dec 2024

- Engineered backend services using Java and Spring Boot to automate appointment booking and evaluation collection, ensuring data accuracy and integration with external student information systems.
- Orchestrated secure login and session tracking with Spring Security and JWT, enabling role-based access control (RBAC) for students, advisors, and administrators.
- Constructed dynamic RESTful APIs and database operations (JPA/Hibernate, SQL) to support real-time updates for schedules, feedback, and performance metrics.
- Developed responsive user interfaces using Thymeleaf, Bootstrap, and HTML/CSS to enhance mobile usability and reduce scheduling errors across academic departments.
- Facilitated encrypted storage and anonymous feedback with hashing techniques and secure identifier mappings, ensuring FERPA-compliant data protection during evaluations.
- Automated email notifications and backend tasks using Spring Batch and scheduled jobs, enhancing system reliability and ensuring timely academic engagement.
- Containerized services using Docker and implemented CI/CD pipelines with Jenkins and GitHub Actions for consistent testing and fast environment deployments.

DBS TECH INDIA (DBS BANK), India | Full Stack Developer

Aug 2021 – Jul 2023

- Developed scalable microservices using Spring Boot and Java to automate corporate onboarding and transaction dispute workflows, significantly reducing manual intervention.
- Engineered secure user flows by implementing Spring Security, OAuth2, JWT, and encrypted data handling to meet stringent banking compliance and regulatory standards.
- Collaborated in Agile sprints to deliver RESTful APIs, custom form validators, and dynamic notification systems for real-time status updates during client onboarding.
- Optimized SQL procedures and backend queries in MySQL/PostgreSQL with indexing, triggers, and stored procedures to support high-volume onboarding and dispute operations.
- Built responsive and dynamic user interfaces using Angular and Angular Material, integrating visual charts (Charts.js), progress indicators, and guided workflows for improved customer interaction.

- Streamlined CI/CD workflows using Docker, Jenkins, Git, and GitHub, enabling reliable builds, automated testing, and environment-specific deployments with rollback capabilities.
- Facilitated background task automation, batch jobs, and real-time updates using Spring Batch and WebSockets to accelerate approval, resolution, and alert cycles in financial processing systems.

Hexaware, India | Software Developer

Jan 2020 - Jun 2021

- Engineered user-friendly web pages for leave application, profile updates, and payslip viewing using HTML, CSS, JavaScript, and Bootstrap, ensuring responsive design and intuitive navigation.
- Developed secure RESTful APIs using Spring Boot to manage employee leave applications, HR requests, and payslip generation, incorporating layered architecture, role-based access control, and input validation to enhance security and data quality.
- Designed and normalized relational database schemas in MySQL with JPA to handle employee records, leave history, attendance logs, and request tracking, optimizing performance through joins and indexing for real-time report generation.
- Implemented Spring Security for secure authentication and authorization, allowing access segmentation for employees and HR users; applied comprehensive exception handling to ensure backend reliability.
- Documented backend APIs using Swagger/OpenAPI and conducted thorough validation with Postman and JUnit to test endpoints, ensure system stability, and support smooth user interactions.
- Utilized Git and GitHub for version control and team collaboration, enabling seamless contributor onboarding, code tracking, and efficient development across modules through feature branching and merge requests.
- Deployed the application on Apache Tomcat, resolved deployment issues via log-based debugging, and collaborated on integrating backend attendance and payroll systems to enhance HR automation.

EDUCATION

Masters in Computer science

May 2025

Texas Tech University, USA

CERTIFICATES

- AWS Certified Developer Associate from Amazon Web Services (AWS)
- Machine Learning by Coursera
- Data Analytics and Visualization by Udemy

PROJECTS

Bump: Innovative Pothole Management System

- Pioneered a citizen-contractor app using Angular, Spring Boot, AWS, and Firebase, processing 10,000+ monthly pothole reports and slashing average repair time by 72 hours, improving community infrastructure.

Chatbot For Student Assistance

- Created an innovative student support chatbot that handles over 2,500 queries weekly while delivering real-time information regarding class schedules and important notifications. Developed using AIML and Python.

Abusive Language Detection

- Implemented machine learning model using CNN, RNN, NLTK and Word Embedding techniques that flagged inappropriate comments with an accuracy rate exceeding 90%, leading to a more positive experience for users.
