

SUMMARY

Software Development Engineer with **3+ years** of experience building scalable, customer-facing applications, optimizing backend performance, and driving automation through CI/CD and cloud services. Proficient in integrating AI/ML solutions and LLM tools such as OpenAI GPT-4, Lang Chain, and Hugging Face Transformers to enhance application intelligence and user experience. Skilled in deploying machine learning models using Flask/Fast API, feature engineering, model evaluation, and retrieval-augmented generation (RAG) pipelines. Brings strong ownership, adaptability to shifting priorities, and a proven track record of improving system reliability, reducing bugs, and accelerating release cycles across cross-functional teams.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C#, JavaScript, TypeScript, SQL
Frontend Technologies: React.js, HTML5, CSS3, Bootstrap, Tailwind CSS
Backend Technologies: .NET, Node.js, Express.js, Java (Spring Boot)
Databases: PostgreSQL, MySQL, MongoDB, SQLite, Redis
AI & ML Tools: Scikit-learn, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Model Deployment (Flask, Fast API), Model Evaluation, Feature Engineering, Hyperparameter Tuning, A/B Testing, Model Monitoring
LLM Tools & AI Integration: OpenAI GPT-4/GPT-4o API, Lang Chain, Hugging Face Transformers, Pinecone, RAG (Retrieval-Augmented Generation), Prompt Engineering, Azure OpenAI, AWS Bedrock
Version Control & Dev Tools: Git, GitHub, GitLab, Docker, VS Code
Software Engineering Concepts: OOP, Data Structures, Algorithms, REST APIs, MVC Architecture
Cloud & DevOps: AWS (EC2, S3, Lambda), Azure Basics, CI/CD (GitHub Actions, Jenkins)
Testing & Quality: JUnit, PyTest, Selenium, Postman, Debugging, Unit Testing
Agile & Collaboration: Agile/Scrum, Jira, Confluence, Stand-ups, GitFlow
CS Fundamentals: Operating Systems, Networking Basics, Database Management Systems (DBMS)
Security Basics: OWASP Top 10, HTTPS, Authentication/Authorization (OAuth2, JWT)

EDUCATION

Master in computer science

Kennesaw State University, Marietta Georgia

Aug 2023 - May 2025

CERTIFICATION

AWS Certified Developer - Associate ([Link](#))

PROFESSIONAL EXPERIENCE

Elevance Health, GA, US

Software Development Engineer

Jan 2025 - Current

- Assisted in building React.js components for member-facing dashboards, improving average page load time by 42% and resolving over 60 UI issues reported in accessibility audits.
- Contributed to backend APIs using Node.js and PostgreSQL for claims tracking, reducing query response time by 37% and supporting 7,000+ daily requests from provider search tools.
- Helped automate deployment processes using Docker and GitHub Actions, shortening release time by 70% and improving version consistency across three testing environments.
- Integrated AWS Lambda functions for file processing tasks, replacing manual workflows and enabling 12,000+ automated requests weekly without disrupting production traffic.
- Wrote unit tests using PyTest and JUnit to support ongoing releases, raising code coverage to 91% and reducing post-deployment bug counts by 46% over three months.
- Attended daily Agile ceremonies and used Jira for tracking stories, helping the team maintain 95% sprint completion across multiple roadmap features.
- Integrated OpenAI GPT-4 APIs to develop intelligent chatbot features for internal support tools, reducing average response times by 60%.
- Developed a document Q&A engine using Lang Chain and Pinecone for semantic search, improving user access to policy data by 70%.
- Designed and deployed a retrieval-augmented generation (RAG) pipeline using Hugging Face Transformers and vector search (FAISS) to enable real-time knowledge access in a healthcare portal.
- Trained classification models using Scikit-learn and TensorFlow, achieving 87% F1 score in patient risk prediction using anonymized EHR data.
- Applied feature engineering and hyperparameter tuning to improve model performance, reducing overfitting by 30% across iterations.
- Leveraged AWS Bedrock and OpenAI APIs to build LLM-powered knowledge assistants for internal documentation systems.

Associate Software Development Engineer

- Contributed to Spring Boot APIs for EHR modules connected to MySQL, handling 10,000+ transactions daily and maintaining under 300ms latency across key workflows.
- Worked on React.js and Tailwind CSS interfaces for care platforms, improving Lighthouse accessibility scores by 38% and fixing 120+ layout and spacing issues.
- Developed Selenium and JUnit test cases to cover regression scenarios, increasing test coverage from 58% to 91% and reducing bugs found during QA by 44%.
- Streamlined deployment process using GitLab CI/CD and Docker, reducing pre-release integration errors by 45% and cutting environment setup time by 60%, accelerating staging delivery cycles by 30%.
- Participated in Agile sprints and clarified user stories during grooming sessions, lowering average story rollover by 29% over two quarters.
- Reviewed merge requests with peers, suggested improvements, and reduced duplicate logic by 33% across shared UI components.
- Provided go-live support by reproducing bugs and reporting incidents, helping reduce client-reported issues by 48% across two major product releases.
- Built prompts and chains using Lang Chain for summarization and classification tasks across 1,000+ support tickets, improving triage automation.
- Experimented with Azure OpenAI for secure deployment of LLM services within a sandboxed enterprise environment.
- Deployed models using Flask and Fast API with Docker, enabling scalable REST endpoints for real-time predictions.
- Implemented A/B testing and monitoring dashboards using Matplotlib and logging hooks to track model drift and user behaviour.
- Integrated LLM-based autocomplete and documentation generation features into internal dev tools, improving engineering efficiency by 25%.
- Used GitHub Actions for continuous integration of prompt updates and Lang Chain workflows as part of CI/CD pipelines.

PROJECTS

1. LLM-Powered Internal Support Chatbot

- **Tech Stack:** OpenAI GPT-4, Node.js, React.js, AWS Lambda, GitHub Actions
- **Summary:** Integrated OpenAI GPT-4 API into internal tools to build an intelligent support chatbot that automated FAQs and support workflows, reducing response time by 60%.

2. A/B Testing and Model Monitoring Dashboard

- **Tech Stack:** Matplotlib, Python, Fast API, Docker
- **Summary:** Created monitoring tools and A/B testing pipelines for deployed ML models to track accuracy drift and usage behaviour; improved early detection of model performance issues.

3. Autocomplete + Doc Generator using LLMs

- **Tech Stack:** Azure OpenAI, React.js, Lang Chain, GitHub Actions
- **Summary:** Integrated LLM-based autocomplete and document generation into internal dev tools, increasing engineering efficiency by 25%; CI/CD pipeline automated Lang Chain workflow updates.
