

Bhargav Pappula

Clinical Data Analyst | Clinical Data Manager
IL | 708-365-4227 | bhargav.p@newjobdesire.com

SUMMARY

Clinical Data Manager and Analyst with 4+ years of experience leading end-to-end data operations for global Phase II/III trials. Skilled in **Medidata Rave, Oracle InForm, SQL, Python, R, SAS, Tableau, and Power BI**, with expertise in **CDISC SDTM standards, 21 CFR Part 11, and ICH-GCP compliance**. Proven success in designing **120+ eCRFs with 250+ edit checks**, improving query resolution time by **40%**, and reducing database lock cycles by **20%**. Strong collaborator across Clinical Operations, Biostatistics, and Regulatory teams to deliver high-quality, submission-ready datasets that support faster regulatory approvals and better patient outcomes.

SKILLS

Clinical Data Management Systems: Medidata Rave, Oracle InForm, OpenClinica, REDCap, SAS Clinical Data Management, Electronic Data Capture (EDC), CRF/eCRF Design, Edit Checks, Query Management, Database Lock

Analytics Programming: SAS (Base, Macro, Clinical), R, Python, SQL, Oracle, Excel, Tableau, Power BI, Spotfire

Standards Compliance: CDISC (SDTM, AdAM, CDASH), MedDRA, WHO Drug, ICH-GCP, FDA 21 CFR Part 11, HIPAA, GDPR, Regulatory Submissions (FDA/EMA eCTD)

Data Quality Validation: Data Cleaning, Discrepancy Management, Reconciliation (Lab, SAE, Pharmacovigilance), Risk-Based Monitoring (RBM), Data Validation Specifications, Audit Readiness

Reporting Deliverables: Patient Profiles, Safety Listings, Efficacy Reports, Interim/Frozen Datasets, Data Management Plans (DMP), CRF Completion Guidelines, Clinical Trial Dashboards

Project Stakeholder Management: CRO & Vendor Management, Cross-functional Collaboration (Biostatistics, Clinical Operations, Pharmacovigilance), Agile/Waterfall Methodologies, Timeline & Milestone Management, Leadership & Team Coordination

EDUCATION

Master of Business Administration in Health Informatics Lewis University, Chicago	Dec 2024
Bachelor of Pharmacy Gyana Jyothi College of Pharmacy, India	Aug 2020

EXPERIENCE

Syneos Health, IL | June 2024 - Current | Clinical Data Manager

- Implemented and managed Medidata Rave EDC and Oracle InForm for Phase II/III oncology studies; built and validated study databases, CRFs, and edit-check specifications; configured 21 CFR Part 11 controls (eSignatures, audit trails, RBAC) and authored validation scripts, ensuring compliance with FDA and ICH-GCP.
- Designed and validated 120+ eCRFs in Rave Architect, developing 250+ edit checks (range, consistency, cross-form) and CRF annotations aligned with CDISC SDTM standards, achieving a 98% first-pass data entry rate.
- Led query and discrepancy management across 15 global sites, deploying SLA tracking and Rave dashboards to reduce median query resolution time from 7 to 4 days (40% improvement).
- Coordinated bi-weekly SAE reconciliation between Rave EDC and Oracle Argus safety database; reconciled case IDs, event dates, and MedDRA-coded terms, ensuring 100% compliance with pharmacovigilance reporting timelines.
- Directed interim data reviews and DSMB data cuts, generating validated patient listings, reconciliation logs, and data snapshots with <5% open critical queries at each cut-off.
- Accelerated database lock readiness by streamlining query closure, reconciliation sign-offs, and freeze checks; reduced Last Patient Out (LPO) to Database Lock (DBL) cycle from 30 to 24 days (20% faster).
- Collaborated with Clinical Ops, Biostatistics, and Regulatory Affairs to standardize edit-check specifications, visit window validations, and SDTM data mappings; shortened data cut-to-TLF delivery timeline by 10 days.

Space Infolab, India | April 2020 – Nov 2022 | Clinical Data Analyst

- Collected and validated clinical trial and patient health datasets from EHR systems, lab records, and claims data using SQL and Python, ensuring 99% accuracy and compliance with HIPAA and Indian regulatory guidelines (CDSCO).
- Developed automated ETL pipelines in SQL and Python to streamline data integration from multiple hospital and trial systems, reducing manual processing by 40% and improving real-time availability.
- Performed advanced statistical analyses using R and SAS (including regression, survival analysis, and hypothesis testing) to assess drug efficacy, treatment outcomes, and adverse event risk factors.
- Designed and deployed interactive dashboards in Tableau and Power BI to track trial progress, patient safety KPIs, and drug response trends, accelerating executive decision-making by 30%.
- Collaborated with cross-functional teams, including clinicians, CROs, and regulatory officers, to prepare submission-ready datasets for FDA and EMA compliance, ensuring adherence to ICH-GCP standards.
- Executed data quality audits and anomaly detection using Python (Pandas, NumPy) and SQL queries, identifying inconsistencies that improved reporting integrity by 25%.
- Applied predictive modeling techniques in Python (Scikit-learn) to forecast patient readmission risks and treatment outcomes, enabling early interventions and improving patient care strategies.
- Translated clinical data insights into actionable reports and visualizations using Tableau, Power BI, and Excel, empowering stakeholders to make informed decisions in clinical trials and healthcare operations.
