SUMMARY

Innovative **Software Development Engineer** with **3 years of experience** in developing efficient health insurance systems. Architected automation solutions, resulting in 22% faster claims processing, and improved customer satisfaction. Seeking opportunities to leverage robust skills in **Python, AWS, and CI/CD** to drive digital transformation and operational excellence.

SKILLS

Languages:	Python, C#, C++, and SQL
Frameworks:	Django, and Flask
Web Technologies:	HTML5, CSS3, React.js, and Angular.js
API Development:	RESTful Services, GraphQL APIs
Database Management:	MySQL, PostgreSQL, MS SQL Server, Oracle, SQLite, MongoDB
Cloud Technologies:	AWS (EC2, S3, RDS, Lambda), Azure, Google Cloud Platform
DevOps Tools:	Docker, Kubernetes, Jenkins, Ansible, Terraform, GitHub
Agile Methodologies:	SDLC, Agile, Scrum, Waterfall

EXPERIENCE

CIGNA INC., NY

Software Development Engineer

| Aug 2024 – Present

- Architected and developed a health insurance claims automation system using Python (FastAPI, Flask), SQLAlchemy, and PostgreSQL, reducing claims processing time and improving overall customer satisfaction.
- Developed a real-time patient data synchronization module using Apache Kafka and Pandas, ensuring secure and HIPAA-compliant data updates from external healthcare providers.
- Built a Django-based backend API for a React.js-powered customer portal, enabling users to manage health benefits, schedule appointments, and access personalized plans, leading to a good increase in user engagement.
- Integrated Elasticsearch for logging and monitoring, reducing downtime by 10% and ensuring excellent SLA compliance.
- Implemented CI/CD pipelines using GitHub Actions, Docker, and Kubernetes, facilitating automated testing and seamless deployments across development and production environments.
- Designed and deployed Terraform-based infrastructure to provision AWS Lambda, ECS, and IAM for secure cloud-based operations, optimizing deployment efficiency.

Hyperlink Infosystem, India

Software Developer

| Mar 2021 – Oct 2023

- Led design and implementation of Python-driven front-end solutions using React and AngularJS for real-time risk monitoring, improving UI.
- Developed micro services for a financial services platform by Python (Django, Flask), PostgreSQL, and Redis, improving transaction processing speed responsiveness and accelerating decision-making for risk analysts by 18%.
- Involved in Web/Application development using Python, HTML5, CSS3, AJAX, JSON and jQuery.
- Implemented and modified various SQL queries and Functions, Cursors and Triggers as per the client requirements.
- Perform troubleshooting, fixed and deployed many Python bug fixes of main applications for both customers and internal customer service team.
- Designed and implemented RESTful APIs and GraphQL services, consumed by client applications, enhancing service integration and scalability, leading to 8% improvement in uptime.
- Querying data from MongoDB and use them as input for the machine learning models.
- Containerized apps using Docker & Kubernetes, ensuring high availability and seamless load balancing across multi-environment deployments.
- Assisted in Deploying applications on AWS ECS (Fargate) and Lambda with Terraform for infrastructure automation.
- Implemented OAuth2 and JWT authentication to enhance application security, ensuring compliance with industry standards for data protection.
- Migrated from old server to Jira database with Python scripts for transferring and verifying the information.
- Deployed the project into Heroku using GIT version control system,

EDUCATION

Master of science in Computer Science

Pace University, New York

| 2025

Bachelor of Engineering in Information Technology

Apollo Institute of Engineering and Technology, India

| 2021

CERTIFICATIONS

Hackerrank – Software Engineer

Udemy – AWS Certified Developer

PROJECTS

Healthcare E-Commerce Platform

- Developed a scalable healthcare e-commerce platform using Python, Django, and PostgreSQL, enabling users to browse, purchase, and rent medical equipment, ensuring data privacy in compliance with healthcare regulations.
- Implemented an automated order processing system with Flask-based APIs, integrating payment gateways, real-time inventory tracking, and rental management to enhance operational efficiency and user experience.
- Designed and optimized a recommendation engine using machine learning algorithms (Scikit-learn, Pandas) to suggest personalized medical equipment based on user preferences, rental history, and patient needs.
