

Bhargav Yadav

Bear, Delaware

PH: +13022415949

Email: bhargavyadav779@gmail.com

Profile:

Aspiring Data Analyst with a strong foundation in data analysis, statistics, and visualization. Proficient in tools such as Excel, SQL, Python, and Tableau, with hands-on experience through academic projects and certifications. Passionate about transforming raw data into actionable insights to support business decision-making. Adept at cleaning, analyzing, and presenting data in a clear and concise manner. Eager to apply analytical thinking and problem-solving skills in a dynamic, data-driven environment. Open to entry-level opportunities where I can contribute to real-world challenges and continue learning.

Education:**Master of Science in Computer and Information System Security**

(Information Assurance & Cybersecurity) - Wilmington University 08/2023 – 05/2025

Bachelor of Technology in Mechanical Engineering

Vignana Bharathi Institute of Technology 07/2017 – 05/2021

Projects:**IT Capstone – Comparative analysis of SDLC and PMLC in Project Management**

- SDLC provides a structured process for developing high quality software whereas PMLC guides the overall project from starting to end ensuring time, cost, and scope constraints.
- Both models share phases such as planning and quality assurance, emphasizing collaboration and aiming to deliver successful project outcome.
- SDLC is specific to software development and technical deliverables while PMLC applies to broader project management across industries.
- Constraints of SDLC include strict adherence to process limited flexibility and challenges with integration and change management while PMLC include resource limitations, managing stakeholder expectations and balancing the project constraints.
- Understanding and integrating both SDLC and PMLC models enhances project success through improved planning, execution and delivery.

Detection and Analysis of Unauthorized Network

- Identifying unauthorized login attempts and network anomalies with SIEM based log analysis with Splunk.
- Created a lab with two virtual machines using VMware workstation and enabling virtualization and connected both with Internal network.
- Installed two different OS i.e., Kali Linux (attacker machine) and Ubuntu(target) in each VM and configured SSH and RDP for remote access.
- Simulated common attacks such as brute force login attempts using Hydra over SSH and port scanning, documented alert behavior using Splunk.
- Captured network traffic with Wireshark during the attack to analyze TCP flags, connection attempts, source IP's and frequency of request.
- Detected multiple brute force attempts originating from Kali machine.
- Wireshark helped visualize and confirm the nature of traffic during port scans.
- Understood the characteristics of real attack behavior on a network.

Experience:

CNC Machinist Intern

(TVS Sundaram Fasteners) 02/2021 – 07/2021

- Learned the types of process in manufacturing like Molding, Casting, Machining.
- Learned how to write a program with M codes and G codes to operate a CNC machine. M codes are the machine control codes which tell a machine to change tool, turn on spindle, open/close the door and G codes are used to set the position of the tool to perform operations.
- Learned what types of tools are used for various types of operations in a CNC machine.
- Performed operations like drilling, milling, etc according to required dimensions and checking the tolerances of the job. After machining the jobs were sent to the Assembly section.

Projects & Volunteering:

Freelance Graphic Designer

- Designed thumbnails, Banners, visual branding and video edits for creators.
- Created college event banners for college fests.
- Managed client communication, feedback, and delivery timelines.
- The tools used for the designs are Adobe Photoshop, Canva, Premier pro.

Certification:

- Python (Free code camp)
- Cisco Network Security: Secure Routing and Switching
- Cisco Certified Support Technician: Network Fundamentals
- Cybersecurity Essentials (Cisco)

Skills and Technologies:

Technical skills	Network Installation, Troubleshooting, Routing, Firewalls, OS installation, Hardware installation, TCP/IP, DHCP, DNS, UDP, IPv4/IPv6 addressing and subnetting, Packet analysis
Technologies and Tools	Microsoft Office, Python, C, Git, Visual Studio, SQL, Visio, Wireshark, AutoCAD, SolidWorks, Ansys, VMware, MATLAB, Adobe Photoshop, Adobe Premier Pro, Adobe Visual Effects, Canva
Operating System	Windows, Linux, MacOS
