SUMMARY

Experienced **software engineer 5+ years designing and deploying enterprise-grade** applications and APIs across financial, healthcare and IT domains. Proficient in Java, C#, .NET Core, Python, SQL and cloud platforms (AWS, Azure), with strong skills in microservices, RESTful APIs, DevOps automation and database optimization. Adept at working in Agile/Scrum teams to build scalable, secure solutions that improve efficiency and customer satisfaction.

SKILLS

- **Programming Languages:** Java, C#, .NET Core, Python, JavaScript, TypeScript, Go.
- **Frameworks & Libraries:** Spring Boot, ASP.NET MVC, Hibernate, React, Angular, Node.js, Django.
- **Web & API Development:** RESTful APIs, SOAP Services, GraphQL, gRPC, Microservices, OpenAPI/Swagger.
- **Databases:** SQL Server, MySQL, PostgreSQL, Oracle, MongoDB, Redis.
- **Cloud Platforms:** AWS (EC2, Lambda, S3, RDS), Azure (App Services, Azure SQL, Functions), GCP (BigQuery, Pub/Sub).
- **Data Engineering:** ETL (SSIS, Talend, Informatica), Snowflake, Redshift, BigQuery, Apache Spark.
- **DevOps & CI/CD:** Jenkins, GitHub Actions, Azure DevOps, Docker, Kubernetes, Terraform.
- **Testing Tools:** JUnit, NUnit, Selenium, Postman, Cypress, Cucumber BDD.
- **Version Control:** Git, Bitbucket, TFS, GitHub, GitLab.
- **BI & Reporting Tools:** Power BI, Tableau, SSRS, Excel (Power Query), Qlik Sense.
- **Security & Compliance:** OAuth2, JWT, SAML, OpenID Connect, OWASP, GDPR, HIPAA.
- **Methodologies:** Agile (Scrum/Kanban), Waterfall, SAFe Agile, TDD, BDD, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer | Capital One Financial | USA

Jan 2025 – Present

- Designed and developed enterprise-grade applications in C# and Java using .NET Core, Spring Boot, and SQL Server, supporting financial systems that processed 100K+ transactions daily with high reliability.
- Built and deployed RESTful APIs in C# and Java integrated with third-party vendor platforms, reducing manual reconciliations by 30% and ensuring secure transactions through OAuth2/JWT authentication.
- Created and optimized ETL pipelines using SSIS, Talend, and Python, consolidating data from ERP and CRM systems into Redshift warehouses, improving reporting accuracy and reducing latency by 45%.
- Implemented CI/CD pipelines using Jenkins and Azure DevOps for .NET and Java applications, automating build, test, and deployment stages, cutting release cycle time from 2 weeks to 5 days and minimizing deployment failures across environments.
- Partnered with QA teams to integrate automated testing frameworks using Selenium, JUnit, and Postman into the CI/CD pipeline, achieving 80% test coverage and reducing post-release defects by 25% through early bug detection and faster regression testing.
- Collaborated with cross-functional Agile teams to refine business requirements, draft technical specifications, and consistently deliver sprint commitments, resulting in a 20% improvement in feature delivery speed.
- Conducted SQL query optimization and index tuning across large datasets, enhancing report execution speed by 35% and reducing overall system load, while ensuring efficient use of database resources.
- Developed responsive front-end modules using Angular, React, and jQuery integrated with C# backends, enhancing cross-browser compatibility and improving user experience while reducing application load time by 22%.
- Implemented logging and monitoring solutions using ELK Stack and Azure Application Insights, enabling proactive issue detection and reducing mean time to resolution (MTTR) by 15% for production incidents.
- Authored design documentation, SOPs, and technical guides to support effective knowledge transfer, accelerate onboarding of new engineers, and ensure consistency in engineering processes and best practices.

Software Engineer | Hexaware Technologies | India

Aug 2018 – July 2023

- Designed, developed, and deployed modular microservices using Java Spring Boot and .NET Core, integrating with Oracle and PostgreSQL databases to improve scalability and fault tolerance, resulting in a 30% reduction in application downtime.
- Created and maintained API-driven integrations (REST, SOAP, GraphQL) using C# Web API, implementing authentication and versioning to ensure secure, seamless data exchange and improve automation by 25%.
- Built scalable ETL pipelines with Apache Spark, Python and Snowflake, cutting data preparation time from 8 hours to 2 hours.
- Implemented cloud-native deployments on AWS and Azure using Docker, Kubernetes and automated pipelines (Jenkins, GitHub Actions), achieving 99.9 % uptime and reducing infrastructure costs by 20 %.
- Delivered real-time dashboards in Tableau and Power BI connected to SQL Server and Snowflake, enabling live KPI tracking, interactive visualizations, and on-demand insights for stakeholders, while reducing manual reporting efforts by 40%.
- Applied test-driven development with NUnit, Selenium and Cypress and optimized SQL queries and stored procedures, leading to 18 % higher customer satisfaction and 28 % faster system responses.
- Collaborated with product owners and mentored junior developers to translate requirements into technical designs, user stories and C# modules, increasing sprint velocity and team skill levels.

EDUCATION

Masters in Information Technology | Gannon University, Erie, USA
Bachelors in Computer Science and Information Technology | QIS college, India.

Aug 2023 - May 2025
July 2016 - Sep 2020

CERTIFICATES

Microsoft Azure Developer Associate (AZ-204) Docker
Certified Associate
Google Cloud Professional Data Engineer
ITIL Foundation Certification, Udemy
SQL Certification, Simplilearn

PROJECTS

1. AI Online Banking & Fund Transfer Portal

- **Tech Stack:** .NET Core, C#, SQL Server, Entity Framework, Docker, Azure App Services
- **Summary:** Built a secure online banking system that supports balance viewing, fund transfers, mini-statements, and PDF transaction reports with role-based access.
- **Valuable Tools:** Azure App Services, JWT Auth, Swagger, Docker, ELK Logging
- **Key Impact:** Reduced manual reconciliation and improved secure digital banking experience.

2. Stock Portfolio & Trade Management System

- **Tech Stack:** Python, Django, REST API, PostgreSQL, Redis, Celery
- **Summary:** Developed a platform where users buy/sell equities using live/dummy market data, track profit/loss, and generate portfolio statements.
- **Valuable Tools:** Celery for async order processing, Redis caching, PostgreSQL
- **Key Impact:** Improved order processing reliability and reporting accuracy for traders.

3. Inventory & Order Management System

- **Tech Stack:** .NET Core MVC, SQL Server, Bootstrap, Redis Cache
- **Summary:** Designed a retail inventory system with supplier management, billing, GST invoicing, and auto low-stock alerts.
- **Valuable Tools:** SQL Server Reporting Services (SSRS), Swagger, Redis Cache
- **Key Impact:** Enabled 30–40% faster stock updates and reduced billing errors.

4. Hospital Patient & Appointment Management

- **Tech Stack:** Python, Django, MySQL, REST APIs, Bootstrap
- **Summary:** Developed a healthcare portal for patient registration, doctor scheduling, e-prescriptions, billing, and insurance details.
- **Valuable Tools:** Django Admin, MySQL, PDF report generator, JWT Auth
- **Key Impact:** Reduced appointment scheduling conflicts and digitized patient records securely.

5. AI Document Analyzer & Auto-Compliance Checker

- **Tech Stack:** Python, FastAPI, Azure OpenAI / OpenAI GPT-4, SQL Server or PostgreSQL, Docker
- **Summary:** Built an AI service that reads PDFs (invoices, contracts, HR forms), extracts important fields, and flags missing or non-compliant data automatically.
- **Valuable Tools:** Azure OpenAI, FastAPI, PyPDF2/Tabula, Swagger, Docker
- **Key Impact:** Reduced manual document review time by 60% and prevented invalid submissions before entering workflow.
