SUMMARY

Detail-oriented Data Analyst skilled in SQL, Python, and Excel. Experienced in data cleaning, interpretation, and generating insights to drive business decisions. Passionate about optimizing efficiency through data-driven solutions.

EDUCATION

Master of Science in Technology Management from Lindsey Wilson College, Columbia. August 2022 – December 2024.

Bachelors in Electronics and Communication Engineering. August 2018 – June 2022.

TECHNICAL SKILLS

Programming Languages: **Python**, R, **SQL**, C++, C, **Java**, HTML.
Operating Systems: Windows, Mac
Data Structures and Algorithms
Business Intelligence Tools: **Tableau**
Productivity tools: **Microsoft Office**

Project Experience

Emotional Intelligent Chatbot: Jan '22 to Mar'22

Applied NLP techniques to train a chatbot for emotional intelligence, achieving an accuracy of 90% in emotion detection. Developed algorithms to analyze text inputs from users, ensuring an 85% accuracy in identifying emotions.

Integrated sentiment analysis models to enable the chatbot to provide tailored responses, results in the increase of user satisfaction. Deployed the emotionally intelligent chatbot in real-world scenarios, leading to reduction in negative interactions and boost in positive engagement.

Roles and responsibilities:

- Gathered, cleaned, and prepared text data for chatbot training.
- Applied NLP techniques, including tokenization, stop word removal, and stemming, to preprocess textual inputs.
- Ensured high-quality data processing to improve chatbot performance and accuracy.
- Collaborated with developers to integrate emotion detection models into the chatbot.
- Ensured seamless deployment in real-world applications while monitoring user engagement metrics to enhance chatbot performance and user experience.

Fruit Disease Detection (Using Image Processing and Deep Learning): May '22 to Jun'22

Researched and implemented image-processing techniques for fruit disease detection to enhance crop yields and reduce financial losses.

Utilized Convolutional Neural Networks (CNNs) for automated disease identification, leveraging their capability to extract complex visual features for improved accuracy.

Focused on optimizing algorithms for deployment on low-computation platforms, making advanced detection tools more accessible to farmers in rural areas. Contributed to future advancements by exploring multispectral imaging, improving model reliability, and developing real-time disease classification applications.

Roles and responsibilities:

- Collected and curated a dataset of fruit images, including both diseased and healthy samples.
- Applied preprocessing techniques such as resizing, normalization, and data augmentation to enhance model training efficiency and accuracy.
- Ensured high-quality image processing to improve the robustness of the disease detection model.
- Developed real-time disease classification applications for practical use.
- Ensured seamless integration with mobile and IoT-based platforms to enable efficient on-field diagnosis and user-friendly accessibility.

RESEARCH PROJECTS:

Emerging Trends and Threats in Cybercrime: May'24 to Jun'24

- Conducted comprehensive research on emerging cybercrime trends, identifying new attack vectors such as AI-powered threats, and IoT vulnerabilities.
- Investigated the progression of cybercriminal tactics, techniques, and procedures (TTPs) to gain insights into the evolving landscape of cybersecurity risks.
- Formulated actionable recommendations to help organizations enhance their cybersecurity frameworks and address the risks posed by emerging threats.
- Examined the influence of cutting-edge technologies like blockchain and machine learning in both facilitating and combating cybercrime.
- Contributed to increasing awareness about the global impact of cybercrime, its effects on privacy, and the need for adaptive and proactive security measures.

CERTIFICATIONS:

- Engaged in **MACHINE LEARNING WITH PYTHON** workshop, certified by TechNest.Pvt Ltd. Received Certificate of Participation at MLRIT, Hyderabad.
