

BHAVITHA RAMADUGU | Full Stack Developer

NJ, USA | +1 (551) 998-7632 | bhavitharao09@gmail.com | [LinkedIn](#)

SUMMARY

Full Stack Developer with **3+ years** of experience designing and delivering **enterprise-grade applications** using **Java Spring Boot, ReactJS, and microservices architecture**. Skilled in **RESTful APIs, cloud-native deployments on AWS, CI/CD pipelines, and database optimization**. Proven track record of **improving application performance, reducing manual workflows by 40%, and enhancing user engagement** through interactive dashboards and automated processes. Experienced in **Agile environments**, implementing **secure authentication, unit and integration testing**, and mentoring teams to deliver **high-quality, scalable solutions efficiently**.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Uber, NJ, USA Jan 2025 – Present

- Developed **Spring Boot microservices**, improving ride-matching efficiency by **35%**, **reducing latency** for over **one million daily users**, and enabling consistent **real-time** driver-rider data synchronization across multiple metropolitan regions.
- Optimized **RESTful APIs integrated** with **PostgreSQL** and **MongoDB**, decreasing response time by **28%**, **preventing 15,000 failed transactions monthly**, and ensuring accurate synchronization of trip, fare, and payment information.
- Designed **ReactJS** and **Angular front-end** components, **reducing page load times by 20%**, improving mobile application engagement by **18%**, and enhancing **user experience** across **iOS, Android, and web platforms simultaneously**.
- Containerized backend services with **Docker** and **deployed on Kubernetes clusters**, **reducing server downtime by 40%**, enabling peak load handling of **250,000 rides per hour**, and ensuring consistent **system reliability**.
- Integrated **Kafka** and **RabbitMQ** messaging for **real-time events**, delivering over **500,000 notifications daily** without message loss, improving ride status updates, payment confirmations, and driver alerts across multiple cities.
- Developed **automated testing** using **JUnit, Mockito, Selenium WebDriver, and Cypress**, **reducing production defects by 30%**, accelerating **regression testing** speed by **40%**, and supporting stable, **high-quality feature deployment cycles**.

Full Stack Developer | Accenture Solutions Pvt Ltd, India May 2022 – Jun 2023

- Designed and developed **enterprise-grade full-stack applications** using **Java Spring Boot** for backend services and **ReactJS** for dynamic front-end interfaces, improving **responsiveness** and streamlining core business operations efficiently across multiple modules.
- Built **RESTful APIs** for secure data access and **CRUD operations**, integrating with **MySQL and PostgreSQL** databases, **optimizing queries, implementing indexing**, and ensuring **high-performance** application response times for **mission-critical processes**.
- Developed interactive **real-time dashboards** in **ReactJS** integrated with backend **microservices**, improving reporting speed, enhancing **user engagement**, and providing actionable insights for stakeholders across multiple business units.
- Automated** critical business workflows and reporting pipelines using **Java-based ETL processes** and scheduled jobs, **reducing manual effort by 40%**, accelerating **data processing**, and improving overall **operational efficiency**.
- Deployed and maintained cloud-native applications on **AWS** services, including **EC2, S3, and RDS**, implementing **CI/CD pipelines** with **Jenkins and GitHub Actions**, reducing deployment time by **35%** while improving stability.
- Integrated **AI/NLP** modules into applications for automated document processing, sentiment analysis, and intelligent search capabilities, increasing productivity, reducing manual errors, and improving the speed of content analysis.
- Applied microservices architecture using **Spring Cloud** components such as **Eureka and Feign**, enabling modular development, service discovery, inter-service communication, and scalable application deployment across distributed systems.
- Implemented secure **API** access using **JWT-based authentication** and **OAuth 2.0**, protecting sensitive data, enforcing authorization rules, and maintaining compliance with internal and client security standards consistently.
- Built comprehensive unit and integration test suites using **JUnit, Mockito, and Cypress**, increasing **code reliability**, detecting defects early, and ensuring maintainability for scalable full-stack application modules.
- Collaborated with cross-functional **Agile teams**, participating in sprint planning, daily stand-ups, and code reviews, ensuring timely delivery of high-quality features, improving inter-team communication, and achieving sprint objectives efficiently.

Full Stack Developer | Hexaware Technologies, India Jan 2021 – Apr 2022

- Developed enterprise web applications using **Java, Spring Boot, Hibernate, and JSP**, improving data processing efficiency by **25%**, streamlining client workflows, and supporting over **10,000 active daily users reliably**.
- Implemented **REST APIs** with **OAuth 2.0** and **JWT authentication**, improving secure login speed by **30%**, reducing failed authentication attempts by **40%**, and enabling seamless **third-party system integrations** for clients.
- Built front-end interfaces** with **Angular 2+, ReactJS, HTML5, and CSS3**, decreasing page load times by **18%**, improving task completion rates by **22%**, and enhancing cross-platform usability across **web and mobile environments**.
- Automated CI/CD pipelines** using **Jenkins and GitLab CI**, reducing deployment time by **35%**, eliminating human errors, increasing release frequency from **biweekly to weekly**, and accelerating overall **software delivery timelines**.
- Integrated Redis Pub/Sub** and **RabbitMQ** for real-time notifications, delivering over one million messages daily, reducing latency by **25%**, and improving monitoring accuracy for **dashboards, reporting, and client notifications**.
- Conducted unit and integration testing using **JUnit, Mockito, and Pytest**, identifying defects early, reducing post-deployment errors by **27%**, and improving overall **application reliability** across multiple web and backend modules.
- Migrated legacy applications** to **AWS**, including **S3, DynamoDB, and Lambda**, improving uptime by **33%**, scaling resources dynamically for **50% higher** user loads, and reducing infrastructure costs by **20%** consistently.
- Collaborated with cross-functional **Agile teams**, completing **95%** of sprint deliverables on time, improving team velocity by **18%**, and increasing **client satisfaction** through timely, high-quality feature delivery consistently.

TECHNICAL SKILLS

Languages & Frameworks: Java (8–21), Core Java, J2EE, Spring Boot, Spring MVC, Spring Security, JPA, Hibernate, RESTful APIs, Python (Flask, Django), C#, Node.js, TypeScript, JavaScript (ES6+)

Java/J2EE Technologies: Servlets, JSP, JSTL, JDBC, Multi-threading, Java Networking, Spring Data JPA, Lombok, Spring Cloud

Python Technologies: Flask, Django, Pandas, NumPy, SQLAlchemy, Pytest

Application/Web Servers: Tomcat, WebLogic, JBoss, Nginx, Apache, Jenkins

IDEs: Eclipse, IntelliJ, VS Code, PyCharm, NetBeans

Web Technologies: HTML5, CSS3, JavaScript, TypeScript, AJAX, jQuery, Bootstrap, Angular 2+, ReactJS, NodeJS, Express JS API

Technologies: RESTful APIs, Swagger/OpenAPI, Postman, OAuth 2.0, JWT

Web Services: SOAP, REST, Microservices

Methodologies: Agile, Scrum, SDLC, Kanban, TDD, CI/CD practices

Message Brokers: Kafka, RabbitMQ, Redis Pub/Sub

Cloud Platforms: AWS (S3, Lambda, DynamoDB, IAM, CloudWatch), GCP, Azure

Testing Technologies/Tools: JUnit, Mockito, Selenium WebDriver, Rest Assured, Cypress, TestNG

Database: Oracle, MySQL, PostgreSQL, MongoDB, Redis

DevOps & Containers: Docker, Kubernetes, Jenkins, CI/CD pipelines (GitHub Actions/GitLab CI)
Security: SSL/TLS, OAuth2.0, JWT, Secure coding practices
Soft Skills: Problem Solving, Communication, Team Collaboration, Analytical Thinking, Adaptability, Mentoring

EDUCATION

Master's in Computer Science Pace University, New Jersey, USA	GPA 3.74	May 2025
Bachelor's in computer science SR University, Ananthasagar, Telangana, INDIA		May 2022

PROJECT

Smart Wealth – AI-Powered Personal Finance Platform

- **Built a scalable full-stack architecture** using **Java Spring Boot, ReactJS**, and **microservices** with **secure authentication**, payment integration, **OCR-based** receipt scanning, and **NLP pipelines** for intelligent expense categorization and financial insights.
- Developed AI-powered features, including an **OpenAI chatbot** for real-time financial queries and **Power BI dashboards** connected through **RESTful APIs**, enabling personalized budgeting, transaction visualization, and faster financial decision-making.
- Implemented **robust DevOps practices** with **CI/CD pipelines (Jenkins, Docker, Kubernetes)**, serverless functions (**Azure, AWS Lambda**), Kafka messaging, Redis caching, and automated testing, ensuring performance, scalability, and regulatory compliance.

Automatic Essay Scoring Using NLP

- Built **backend services** using **Java Spring Boot** to handle essay submissions, process large datasets, and deliver **real-time** scoring outputs, ensuring scalability, consistent performance, and improved efficiency in academic evaluation.
- **Integrated advanced NLP pipelines analyzing grammar, syntax, semantics, and coherence**, automating assessment of essay quality, enhancing scoring precision, and reducing evaluation bias compared to traditional manual grading approaches in academic institutions.
- **Developed automated scoring logic** with customized feedback generation, providing students with actionable improvement suggestions, **increasing transparency in grading, reducing turnaround times**, and significantly improving overall learner satisfaction rates across multiple courses.

Heart Disease Prediction Using Naive Bayes

- **Designed a microservice-based Java application embedding** a Naive Bayes machine **learning model**, processing structured healthcare datasets, and **generating accurate risk predictions** for heart disease, **improving diagnosis support** and preventive decision-making outcomes.
- **Trained Naive Bayes algorithm** on patient data, including demographics, lifestyle, and clinical metrics, delivering interpretable predictions with strong accuracy, supporting clinicians in identifying **high-risk individuals** requiring immediate interventions or preventive care.
- Engineered **secure APIs** enabling **integration** with hospital systems, providing **real-time heart disease predictions, reducing manual review burden**, assisting physicians in **early diagnosis**, and **supporting faster, data-driven clinical decision-making across healthcare environments**.
