

Bibek Baharadar

Kathmandu, Nepal – 44600

+977-9818589930 | baharadarb@gmail.com | www.bibekbaharadar.com.np

ACADEMIC QUALIFICATION

Bachelor of Science in (Hons) Computing, The British College (TBC), Leeds Beckett University *Sept 2019 – Sept 2023*

Aggregate: First Class Honors (70%+)

Intermediate Science, D. A. V. College

May 2017 – May 2019

GPA: 3.06

WORK EXPERIENCE

Junior Developer, Prime Vendor Nepal, Kathmandu *May 2024 – Present*

- Optimized web scraping algorithms in Java and Python, reducing data extraction time by 40% while increasing accuracy and reliability.
- Implemented scalable data pipelines with Selenium and asynchronous programming, boosting throughput by 60%.
- Maintained and debugged dynamic scraping scripts, ensuring 90% uptime for continuous data collection across changing websites.
- Developed and deployed Django applications for HWMServices.com, integrating frontend–backend workflows and reducing manual processing by 30%.
- Built advanced search features and streamlined hazardous waste tracking, improving system efficiency by 35% and ensuring secure access control.
- Designed and integrated an OCR-based CAPTCHA solver, automating previously manual steps and reducing human intervention by 80%.
- Implemented data filtering and storage pipelines that improved processing accuracy by 25% and reduced database query latency.

MIS and Research Section, Civil Aviation Authority of Nepal, Kathmandu – Internship *July 2022 – Sept 2022*

- Assisted in developing and maintaining web applications, contributing to the enhancement of the organization's digital infrastructure.
- Supported IT documentation and networking activities, ensuring proper documentation practices and network stability.

IT Assistant, Rastriya Banijya Bank, Kathmandu *March 2022 - May 2022*

- Worked in Mobile Banking Department in Card Dispatch and Delivery management.
- Record keeping on Excel and card issuance on a centralized card management system.

PROJECTS

E-commerce Website (PHP, MySQL):

Developed a full-stack e-commerce platform using PHP and MySQL with wireframed UX/UI, optimized database queries to cut product search latency by 40%, implemented secure transaction processing with prepared statements and TLS, and collaborated within a team to ensure scalable system architecture.

Android App for Bird Species Detection (CNN, Flask API, ML):

Designed a mobile app that identifies bird species from audio recordings using a CNN model integrated with Flask API. Achieved 92% classification accuracy and delivered results instantly through an intuitive interface. Demonstrated skills in deep learning, mobile integration, and real-time audio analysis.

Online Store (Laravel 8):

Developed a responsive online store with product listings, secure payment gateways, and middleware for data privacy. Enhanced page load speed by 35% and ensured robust authentication for safe transactions. Strengthened expertise in Laravel and secure full-stack development.

Desktop Currency Converter (Java GUI):

Created a lightweight Java GUI application for real-time currency conversions with a clean and interactive design. Optimized memory usage for better performance on low-end systems. Delivered a functional desktop tool focused on speed, usability, and efficiency.

Movie Sentiment Analyzer (Flask, Python, NLP):

Developed a machine learning system to classify movie reviews using NLP techniques, text preprocessing, and classification models. Deployed with Flask, enabling real-time predictions via a user-friendly web interface. Optimized accuracy to 81% and inference speed for smooth deployment, demonstrating practical ML-to-production integration.

Multi-Tenant SaaS Platform (Django, PostgreSQL):

I developed a scalable multi-tenant SaaS platform that allowed organizations to manage users, tasks, and analytics securely within isolated environments. The system supported customizable branding, tenant-specific dashboards, and secure access control through user authentication and role-based access (RBAC). This project emphasized modular design, data isolation, and best practices in secure architecture.

TECHNICAL SKILLS

- **Programming & Scripting:** C++, Java, Python, Rust, Bash
- **AI/ML Tools & Frameworks:** TensorFlow, Scikit-learn, NLP, OCR, CNN, Flask, Hugging Face, Model Deployment (Flask, Fast API),
- **Web Technologies:** HTML5, CSS, JavaScript, PHP, Laravel, Bootstrap, Django, React, Flask
- **Database:** MySQL, SQLite, PostgreSQL
- **Other Tools:** Git, Selenium, Docker, Gitlab, Notion, Postman

SEMINARS & CONFERENCES

- Attended the Cyber Security Seminar on December 2nd 2021 at The British College.
- Attended the Workshop on Leadership and Communication conducted by Hult Prize at The British College on October 31st, 2020
