Summary

Certified [Professional Data Engineer](#) on the google cloud platform and am knowledgeable in the best practices for pipeline creation, database schema design, data management/storage, data analytics, and ML model training. If you are looking to move your existing data infrastructure into the cloud, improve/update the visualization of your data in reports, or wish to monitor different aspects of your project, I can assist you with that. I also have knowledge in web development and Software Engineering with a few personal and professional projects in my portfolio.

Professional Experience

Full Stack Developer (2024-2025)

Project: IBM EOTC Surge Migration 2024-2025

- Techstack: java, html/css/js, data dog(System performance analysis), Snyk, SonarQube , Oracle SQL, Quartz
- Migrated a legacy server running and updated code that was two decades old
- Split up a monolithic software into a web tier and app tier application to improve maintainability and scalability
- Updated the old data framework and switched to using IICS converting outdated code into tasks in a pipeline

Data Analyst (2022-2024)

Project: Youtube Support Strategy Platform 2024

- Improved project visibility by tracking high/low priority feature progress in dashboards
- Optimized the workflow and cut script run time in half
- Simplified the underlying database by writing documentation and remodeling the underlying architecture into a star schema
- Reduced data latency in dashboards allowing close to real time data in dashboards

Project: Google Android Outreach 1p Tracking 2023

- Performed weekly quality assurance on collected data and dashboards
- Improved work efficiency by tracking issues and reaching out to developers working on features that ran into roadblocks
- Oversaw and produced weekly reports regarding the overall project progress

Project: Google Nest Engagement Production Services 2022-23

- Tracked stats of various engagement devices
- Performed quality analysis on devices in different product groups and highlighted potential errors in the data metrics

Academic Project (2021- 2022)

Full Stack Developer

- Improved reachability by designing a website for the client
- Streamlined data ingestion by designing surveys to record client information
- Simplified order tracking by creating and implementing a database storing client order details/history
- Front end: html,css, bootstrap framework.

- Back end: nodejs using the express js framework for routing, mysql database for customer information storage.

Technical Skills

- **Languages:** Python (numpy,pandas), Google app script, C++, Java
- **Databases:** MySql, Google SQL, Oracle SQL
- **Web Development:** Express/Node.js, Html, CSS, Javascript, Spring boot
- **Data Visualization tools:** PLX Dashboards, Looker Studio, Power BI
- **ETL:** IICS, Dataplex
- **Automation testing:** Selenium, jquery, Junit
- **Version Control:** Github
- **Agile tools/project planning:** Jira

Education

California State University: Sacramento: Bachelor's Degree **August 2020 - June 2022**
Graduated with a CSUS Gpa of 3.53.
San Joaquin Delta College **August 2016 - June 2020**
Tranferred out
