Contact: +1 3312775963

Location: Chicago, IL

PROFESSIONAL SUMMARY

- Data Analyst/ Financial Risk Analyst/ Business Analyst with overall 4 years of experience in IT which includes comprehensive experience in working with Bigdata/ Hadoop Ecosystem components, Data mining and analysis, Data forecasting, Hive, HBase, Spark, Streaming, RDBMS, Cloud Engineering Platforms, Python, Java, Unix, Rest API's and ETL data processing.
- Experience in data warehousing, process validation and business needs analysis. Proven to understand customer requirements and translate into actionable project plans. Dedicated and hard-working with passion for Big Data.
- Experience in designing data intensive applications using Hadoop Ecosystem, Big Data Analytical, Cloud Data Engineering, Data Warehouse/DataMart, Data Visualization, Reporting and Data Quality Solutions.
- Highly experienced in mapping discussion and implementation of inbound and outbound interfaces of OMS.
- Real time working experience with Cloudera (CDH) and Hortonworks (HDP) clusters. Implemented ETL functionalities to process real time data using Spark inbuilt API's and Spark SQL.
- Developed data ingestion modules using AWS Step Functions, AWS Glue and Python modules.
- Expertise in development of various reports, dashboards using Tableau, Power BI, and IBM Cognos.
- Expertise in data manipulation and generating customized reports with SAS data steps and procedures and have experience in handling large amounts of data for Data Cleansing, Data Profiling and Data Scrubbing.
- Experience in analyzing business user requirements, analyzed data, designed software solutions in Tableau Desktop based on the requirements and converting Legacy Reports to Tableau dashboards connecting to SQL Server.
- Exposure to Cloudera Installation on AWS/ Azure Cloud instances and DevOps and excellent understanding of best practices of Enterprise Data Warehouse and involved in Full life cycle development of Data Warehousing.
- Experience with ETL workflow management tools like Apache Airflow and have significant experience in writing Python scripts and implementing the workflow.
- Extensive experience in using SAS/BASE, SAS/STAT, SAS/ACCESS, SAS/CONNECT, SAS/MACRO, SAS/GRAPH, SAS/SQL, Excel and SAS/ODS (RTF, PDF, EXCEL, XML) procedures.
- Excellent proficiency and experience in SharePoint installation, configuration and other capabilities like Metadata, Audience, Scopes, Usage Reports and Crawl Log reporting.
- Having experience in Snowflake cloud data warehousing shared technology environment for providing stable infrastructure, architecture, best practices secured environment, reusable generic frameworks, robust design architecture and automated SCBD (Secure Database connections, code review, build process, deployment process) utilities.
- Experience working with NoSQL databases and big data tools including Hadoop, Hive and Spark.
- Expert in designing ETL/ELT data flows using creating mappings/workflows to extract data from SQL Server and Data Migration, Transformation from Oracle/Access/Excel Sheets using SQL Server SSIS, SSRS, SSAS, UNIX, TOAD and Microsoft Office Suite.
- Used Reverse engineering approach to redefine entities, relationships, and attributes in the data model. Reviewed and approved hundreds of data Modeling/database design documents. Helped increase the efficiency of data Modeling procedures.
- Experienced in fact dimensional Modeling (Star schema, Snowflake schema), transactional Modeling and SCD (Slowly changing dimension).

- Experience in migrating data between AWS and Azure using Azure Data Factory. Experienced in working with Spark eco system using Spark SQL and Scala queries on different formats like Text file, Avro, Parquet, JSON, and XML files.
- Experience in Python libraries such as NumPy, SciPy for mathematical calculations, Pandas for data preprocessing/wrangling, Matplotlib and Seaborn for Data visualization, stats model for Time Series Forecasting.
- Developed intricate algorithms based on deep-dive statistical analysis and predictive data Modeling that were used to deepen relationships, strengthen longevity, and personalize interactions with customers.
- Adept in statistical programming languages like R and Python including Big Data Technologies like Hadoop, Hive.
- Experience with RStudio for data pre-processing and building machine learning algorithms on different datasets. Implemented machine learning algorithms on large datasets to understand hidden patterns and capture insights.
- Experience with Machine Learning, Computer Vision, Deep Learning and Neural Networks algorithms using TensorFlow and designed Prediction model using Data mining techniques with help of Python and libraries like NumPy, SciPy, Matplotlib, Panda and Scikit-Learn.
- Predictive Modeling Algorithms: Logistic Regression, Linear Regression, Decision Trees, K-Nearest Neighbors, Bootstrap Aggregation (Bagging), Naive Bayes Classifier, Random Forests, Boosting, and Support Vector Machines.
- Strong expertise in core Java concepts includes Object-Oriented design and Java components like Collection frameworks, Exception handling and I/O system. Experienced working with Jira, Confluence, Bit Bucket, GitLab, GitHub, Git source and version control system.

SKILLS

Big Data Technologies	Hadoop, MapReduce, HDFS, Sqoop, PIG, Hive, HBase, Oozie, Flume, NiFi, Kafka, Zookeeper, Yarn, Apache Spark
Databases	Oracle, MySQL, SQL Server, MongoDB, Cassandra, DynamoDB, PostgreSQL, Teradata, Cosmos.
Programming	Python, Scala, C, Java
Statistical Analysis	R Programming, SAS
Data Warehousing/ ETL Tools	SSIS, SSAS, SSRS, Talend, Informatica Power Centre and AbInitio
Cloud Technologies	AWS, Microsoft Azure
Microsoft Office Suite	Word, Excel, PowerPoint, SharePoint
Frameworks	Django, REST framework, MVC, Hortonworks
Other Tools	PySpark, Spark, PyCharm, Eclipse, Visual Studio, SQL Server Management Studio, SQL Assistance, Eclipse, Postman
Version Control Tools	SVN, Git, GitHub
Operating	Windows, Ubuntu Linux, MacOS
Network Security	Kerberos

Database Modeling	MS Visio, Erwin, Dimension Modeling, ER Modeling, Star Schema Modeling, Snowflake
Orchestration Tools	Apache Airflow and Step Functions
Visualization/ Reporting	Tableau, ggplot2, matplotlib, SSRS, Alteryx and Power BI
AI/ Machine Learning	Linear & Logistic Regression, Classification and Regression Trees, Random Forest, Associative rules, Azure AI Sentiment analysis, NLP and Clustering

PROFESSIONAL EXPERIENCE

Sierra, Remote
Business Data Analyst
Responsibilities:

(May 2023 – May 2024)

- Worked with BI Team in gathering the report requirements and Sqoop to export data into HDFS and Hive.
- Maintained up-to-date knowledge of industry trends and advancements in data analytics, enhancing the adaptability of solutions provided.
- Utilized data visualization tools like Power Bi and AWS Sage maker to effectively communicate business insights. Created Power Pivot models and PowerPivot reports, published reports onto SharePoint, and deployed models into SQL Server SSAS instance.
- Identified, analyzed, and interpreted trends or patterns in complex data sets and assisted with creating data cubes and OLAP models to improve data analysis. Identified patterns and trends in large data sets and provided actionable insights.
- Maintain the data integrity in SAP by tracking asset dispositions, performing inventories, and updating SAP for all specified sites.
- Integrated multiple sources of disparate data into cohesive datasets using ETL processes, improving overall analytic capabilities.
- Optimized company resources allocation with detailed forecasting models based on historical data analysis. Developed and maintained data warehouses and data marts to support business operations.
- Resolved complex business challenges by leveraging statistical modeling techniques and machine learning algorithms.
- Used strong analytical and problem-solving skills to develop effective solutions for challenging situations.
- Reduced operating costs by automating manual data processes using scripting languages such as Python or R.
- Developed data mining algorithms to identify, classify patterns and tested data prediction algorithms based on historical data.
- Generated comprehensive reports on portfolio performance and risk assessment.
- Gathered requirements and created weekly, monthly and Ad-hoc reports using Teradata SQL Assistant, SAS Enterprise Guide and MS Excel.
- Responsible for EDI strategies enabling health care providers and insurance careers to communicate effectively.
- Developing Data migration services and configurations to migrate existing orders from different OMS versions.
- Analyzed DataOps internal communication with data engineering teams to streamline day-to-day operations.
- Extract data from multiple systems, conduct detailed data analysis, and load data into SAP-MDM.

- Involved in all the phases of Analytics using R, Python and Jupyter Notebook. Analyzed existing internal data and external data, worked on entry errors, classification errors and defined criteria for missing values.
- Extract Business Glossary metadata from Informatica analyst and create linking between Business metadata and technical metadata extracted from all the source systems within organization.
- ETL process to store and retrieve data from SQL Server Database Management, data warehouse and Troubleshoot test scripts, SQL queries, ETL jobs, data warehouse/ data mart/ data store models.
- Used python packages (Pandas, NumPy, Scikit- Learn) for feature engineering and machine learning models. Used machine learning algorithms (Logistic Regression as Baseline Model) to analyze the user demographics and trends.
- Python scripts were written to read CSV, JSON and parquet files from S3 buckets and load them into AWS S3, Dynamo DB and Snowflake.
- Used AWS EMR to transform and move large amounts of data into and out of other AWS data stores and databases, such as Amazon Simple Storage Service (S3) and Amazon Dynamo DB.
- Designed and developed security framework to provide fine-grained access to objects in AWS S3 using AWS Lambda and Dynamo DB.
- Performed End-to-End architecture and implementation of various AWS services like Amazon EMR, EC2, Redshift and S3.
- Load data into Amazon Redshift and use AWS Cloud Watch to collect and monitor AWS RDS instances.
- Implemented AWS Step Functions to automate and orchestrate the Amazon Sage Maker-related tasks such as publishing data to S3, training the ML model, and deploying it for prediction.

Kaseya, Atlanta, GA
Business Data Analyst
Responsibilities:

(Jan 2023 – Apr 2023)

- Extracted data from multiple data sources, wrote python scripts to scrape the data and images.
- Designed dimensional model, data lake architecture, data vault on Snowflake and used Snowflake logical data warehouse for computing.
- Strong experience in migrating to the On-Premises databases/Data Warehouses to Snowflake with experience of using tools such as DBT and Data Stage.
- Used SQL to extract data from Oracle ERP database to analyze data and ensure demand and planning accuracy.
- Provided general business expertise in OMS processes and workflows incorporating multi-channel strategy.
- Managed data storing and processing using big data tools such as Hadoop, HDFS, Hive and Spark.
- Developed data ingestion modules both real time and batch data load to data into various layers in S3, Redshift and Snowflake using AWS Kinesis, AWS Glue, AWS Lambda and AWS Step Functions.
- Worked on workflows for sending reminders and notification emails using SharePoint designer workflows.
- Conducted Backlog Grooming sessions, managed Product Backlog, and Iteration Backlog, created JIRA dashboard reports at Sprint complete, added Labels to user stories to effectively sort and filter to meet reporting needs.
- Developed forecasting tools to analyze revenue variances and capitalize on industry trends.
- Streamlined financial reporting for better decision-making with clear, concise analysis and presentation.
- Provided vital insights for business development initiatives through diligent market research and competitive analysis.
- Collected data and developed detailed spreadsheets to identify trends and create revenue, profitability, and expense forecasts.
- Performed Data Profiling, Data Pipelining and Data Mining, validating and analyzing data (Exploratory analysis/ Statistical analysis) and generated reports.
- Creation of multiple SSIS packages to import data from the legacy (mainframe) system, Oracle, and Mongo DB to target SQL Server DB for report consumption and other use.

- Designed and developed an end-to-end data warehousing and OLAP solution using SSIS, SSRS and SQL Server.
- Worked on AWS hosted Data bricks environment and used Spark structured streaming to consume the data from Kafka and perform merge operations on delta lake tables.
- Developed Spark/ Scala, Python for regular expression(regex) project in the Hadoop/ Hive environment for big data resources.
- Assess and implement advanced web analytics tracking, monitor KPI's using Google analytics, create google analytics reports and dashboards.
- Developed Tableau Data Visualization using Pareto's, Combo charts, Heat Maps, Box and Whisker plots, Scatter plots, Geographic Map, Cross tabs and Histograms.

Aetna, Remote

(Sep 2022 – Dec 2022)

Data Analyst

Responsibilities:

- Developed dashboards and visualizations to help business users analyze data as well as providing data insight to upper management
- with a focus on Microsoft products like SQL Server Reporting Services (SSRS) and Power BI.
- Assisted in designing and developing data like ETL using Python, Hadoop Ecosystem.
- Deployed Big Data tool Spark and Hive to analyze large datasets stored in Hadoop HDFS, including performing filtering and aggregation using Spark SQL based on Spark Data frame.
- Performed gap analysis between existing systems or processes and desired state, identifying areas for improvement or enhancement.
- Identified issues, analyzed information, and provided solutions to problems. Data wrangling and cleansing using Python scripts and Panda's library.
- Involved in statistical data analysis and reporting to support the Customer Experience Team in their business decision process using SAS programming and SQL query.
- Performed EDI analysis, research, and documentation of transactional data set requests and issues from internal and external sources. Assisted with the remediation of data interchange issues and errors of EDI files.
- Experienced in working with Spark Ecosystem using Spark SQL and Scala queries on different formats like Text File, CSV File. Developed and implemented financial models to analyze complex information and assess the health of the organization.
- Created custom objects for API request and response and connect with third party teams for any assistance in API environment and credentials.
- Expertise in implementing Spark using Scala and Spark SQL for faster testing and processing of data responsible for managing data from different sources.
- Extensively used SAS procedures like IMPORT, EXPORT, SORT, FREQ, MEANS, FORMAT, APPEND, UNIVARIATE, DATASETS and REPORT.
- Integrated Third party API integrations like Payment API's, CRM's, testing API's in Postman and provide documentation to QA team.
- Good knowledge in Exploratory Data Analysis, handling missing data, data wrangling, feature scaling, outlier analysis, development of algorithms in R and performed data visualization.
- Implemented report integration among Power BI, Tableau, SSRS and Python reports. Developed Power BI reports using Power Query from SharePoint and different data sources.
- Embedded Power BI reports on SharePoint portal page and manages access of reports and data for individual users using roles.
- Reduced operating costs by automating manual data processes using scripting languages such as Python/R.
- Created release plan documents using JIRA Dashboard reports, used Confluence for Release notes, shared release documents with Product Owner and senior management and updated status at every iteration on backlog status.
- Developed complex dashboard and reporting tools to track business performance metrics.

Vaihuti Infotech Pvt. Ltd, India

(Jun 2018 – Jun 2021)

Data Analyst

Responsibilities:

- Worked with Data Warehouse team in developing Dimensional Model and analyzing the ER-Diagrams.
- Participated in Business Analysis, talking to business Users and determining the entities and attributes for Data Model.
- Identified and determined physical attributes and their relationships through cross-analysis of functional areas. Identified and analyzed source data coming from Oracle, SQL server and flat files.
- Design of an integrated Confidential solution between the Concur and multiple SAP systems used for financial transactions.
- Design and develop the SSIS package and stored procedures for data transferring, deploying, monitoring, and maintaining the ETL.
- Analyzed raw data from various data sources to develop ETL packages using SSIS.
- Build OLAP Cubes for BI data analysis using SSAS Generate Business Reports using SSRS based on different clients requirements.
- Implement data mapping, data validation, data modeling and develop SQL queries for ad-hoc reports.
- Experienced in writing Map-Reduce jobs in Java for processing large sets of structured, semi-structured and unstructured data sets and store them in HDFS.
- Created and manipulated various management reports in MS Excel for sales metrics using VLOOKUP and Pivot tables.
- Developed transformation logic for BI tools (Informatica) for data transformation into various layers in Data warehouse. Perform problem analysis, troubleshooting, problem recreation, and root cause analysis.
- Utilized SQL to develop stored procedures, views to create result sets to meet varying reporting requirements.
- Used Oozie workflow engine to manage interdependent Hadoop jobs and to automate several types of Hadoop jobs such as Java Map Reduce, Hive and Sqoop as well as system specific jobs.
- Performed forward and reverse engineering, applying DDLs to database in restructuring the existing data Model using ERWIN.
- Designed ETL specification documents to load the data in target using various transformations according to the business requirements. Used Informatica- Power center for extracting, transforming, and loading.
- Implemented security best practices within the AWS Glue, AWS Lambda, AWS S3, Amazon Redshift environment, safeguarding sensitive data and ensuring compliance with industry regulations.
- Participated in architectural discussions to build confidence and promote customer success when developing new and migrating existing applications, software, and services on AWS platform.
- Coordinated with project management, lead and managed Scrum Team for Agile solution delivery and MDM implementation, managed team project and deliverables in Atlassian JIRA.

EDUCATION

Master's in Business Analytics: 08/2022

Texas A&M University- Commerce - Commerce, TX

Bachelor's in Computer Science: 04/2018

Acharya Nagarjuna University- Guntur, India
