TECHNICAL SKILLS

Languages/Frameworks: Python, Java, TypeScript, HTML, C#, Angular, NodeJS, Express, MongoDB, .NET

Developer Tools: Git/GitHub, Jira, Google Cloud Platform, AWS EC2, AWS S3, Azure, Docker, Kubernetes, Firebase

WORK EXPERIENCE

Software Engineer Intern

Toronto, ON

Shyftlabs

May 2024 – Aug 2024

- Developed and optimized client-facing REST and GraphQL APIs, using **Kotlin** and **PostgreSQL**, ensuring robust and efficient usage through comprehensive unit and integration testing
- Wrote efficient and accurate **GraphQL** queries to modify and enhance our development and production database, enhancing performance and scalability across our data operations

TD Bank Group - Capital Markets

May – Aug 2022; May – Aug 2023

- Developed **C#** and **ASP.NET** software for client-facing web applications, optimizing user experience and efficiency.
- Enhanced UI features, reducing clicks and improving user flow efficiency by 20%.
- Implemented Java-based automated testing pipelines using **Maven** and **Selenium**, reducing testing time by 20 hours/week.
- Collaborated in an **Agile** team of 8 members, utilizing **Jira** for task management and **Git/BitBucket** for version control.

Royal Bank of Canada

May 2021 – Aug 2021

- Led a 4-member team to architect and implement the front-end software for a client-facing web application, using **Angular** and **TypeScript**
- Leveraged **Figma** for effective front-end visualization and planning, as well as **Git** and **GitHub** for version control and **Jira** for streamlined task management
- Organized **Agile** methodology ceremonies including daily stand ups, weekly sprint retrospectives and demo meetings to ensure meticulous planning, organization, and maintenance of coding standards

Halton Environmental Network

Jan 2021 – Sep 2021

- Collaborated within a team of 3 to develop and maintain an automated data tabulation and notification system using **Python**, **Google Sheets**, **Selenium**, and cloud hosted on **Heroku**
- Ensured data accuracy by validating data between a dashboard and a Google Spreadsheet, autonomously updating the data and notifying users, ultimately saving **10 hours/week for 36 weeks**

PROJECTS

Automated Stock Trading System | *Python, Tensorflow, HTML/CSS, scikit-learn, Deepnote, IKBR API*

Sep 2024

- Developed an automated trading system utilizing a *Convolutional Neural Network* and technical indicators such as MACD, EMA, and regressions to identify and trade high-potential stocks.
- Integrated APIs to automate stock research and execute trades based on predefined criteria and market trends, enhancing trading efficiency.
- Designed and implemented a dashboard using HTML/CSS to track and display key trading metrics, including active trades, stock performance, and market indicators in real-time, providing a visual interface for system monitoring and decision-making.

Floppa Finance - Web-Application for Financial Literacy | *Node.js, Express.js, Angular, SQL*

Jan 2023

- Designed a web application for the TU20 Cup Competition, focused on enhancing financial education for youth through gamification and a short, module-based content system.
- Achieved **1st place** in our category for the TU20 Cup Competition, recognizing the project's impact on improving financial literacy.
- Developed a Node.js and Express.js back-end, an Angular front-end, and utilized MongoDB for database management to ensure a seamless and scalable application.

EDUCATION

Queen's University

Kingston, ON

Bachelor of Computing (Honours) - Specialization in Artificial Intelligence

Sep. 2021 – Apr 2025
