

CHAITHANYA SAKINALA

Data Engineer

(219)386-7092 | sakinalachai@gmail.com | LinkedIn

SUMMARY

Data Engineer with 5 years of experience designing, building, and optimizing data pipelines and ETL workflows in both on-premise and cloud (Azure, GCP) environments. Proven ability to manage structured and unstructured data using SQL, Python, Spark, and modern data warehousing platforms like Snowflake and Azure Synapse. Skilled in developing scalable data models, implementing data quality checks, and enabling real-time analytics for cross-functional teams. Adept at collaborating with stakeholders, ensuring data availability, accuracy, and performance across enterprise-level financial and business intelligence platforms. Strong understanding of data governance, compliance (GDPR), and automation best practices.

SKILLS

Methodologies: Agile, Scrum

Languages: Python, SQL

Integrated Development Environments (IDEs): PyCharm, Jupyter Notebook, IntelliJ, Visual Studio

Big Data Tools: Hadoop, MapReduce, Hive, Apache Spark, Pig

ETL and Workflow Tools: SSIS, Apache NiFi, Apache Kafka, Talend, Apache Airflow

Containerization and CI/CD Tools: Docker, Kubernetes, Jenkins, GitLab

Cloud Platforms and Data Warehousing: AWS (S3, EC2, RDS, Lambda, Redshift), Azure, Snowflake, GCP, Big Query

Framework/Libraries: NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, Seaborn, TensorFlow

Business Intelligence and Visualization Tools: Tableau, Power BI, SSRS, Looker

Databases: MongoDB, MySQL, PostgreSQL, SQL Server

Version Control Systems: Git, GitHub, AWS CodeCommit, Apache subversion

EXPERIENCE

Data Engineer, Freddie Mac, USA

Feb 2025 – Present

- Partnered with finance teams to extract and integrate data from SQL Server databases, Excel workbooks, and flat files, ensuring seamless interoperability across legacy financial systems.
- Re-engineered the data architecture to support regulatory and financial reporting by applying data integrity constraints (primary/unique keys) and building reference tables to align disparate source systems.
- Developed and maintained SSIS packages within Azure Data Factory for robust ETL workflows, enabling timely and accurate loading of transactional and market data into centralized financial data warehouses.
- Utilized PyCharm to streamline ETL scripting in Python, accelerating development cycles and improving error detection in revenue reconciliation pipelines by 20%.
- Collaborated with QA teams to test ETL packages and address data quality issues during UAT phases, employing advanced error-handling techniques for audit and exception reporting.
- Tuned SSIS packages and optimized SQL queries for financial datasets, improving load performance and reducing latency in time-sensitive reports using execution plans and index tuning.
- Authored and maintained complex T-SQL stored procedures, functions, and views to support internal financial systems, portfolio analysis, and month-end reporting workflows.
- Produced detailed technical documentation for all data packages, including source mappings, transformation logic, and data lineage to support audit readiness and compliance.

Data Engineer, KellTon, INDIA

Jan 2023 – June 2023

- Built and deployed large-scale data processing systems using Apache Spark and Apache Airflow and to cut the processing time by 40%.
- Experienced with machine learning algorithms like regression, ensemble methods, neural networks, linear regression, and clustering algorithms.
- Prepared end-to-end machine learning workflow, written Python code for collecting data from AWS snowflake, data preprocessing, feature extraction, modeling, evaluating the model, and deployment.
- Executed Continuous Integration and Continuous Deployment with AWS Lambda and AWS CodePipeline, reducing deployment time by 40% and increasing deployment success rate by 15%.
- Created a multi-terabyte, full end-to-end Data Warehouse on Amazon Redshift, capable of handling millions of records daily, improving data processing capacity by 50% and query performance by 35%.

ETL Developer, Broadridge Financial Solutions, INDIA	Dec 2018 - Dec 2022
- Designed and deployed scalable ETL pipelines using AWS services such as S3, EC2, Lambda, RDS, and Redshift, enabling near real-time data processing and reducing operational costs by 30%. - Built and orchestrated large-scale data ingestion workflows using Python and Apache Airflow to automate end-to-end ETL processes across multiple data sources. - Developed robust ETL jobs using PySpark, integrating data lineage and transformation logic, which reduced processing errors by 25% and improved data traceability. - Automated data validation and cleansing scripts using GCP tools to streamline ETL workflows, cutting manual effort by 50% and improving data quality. - Engineered data integration processes to consolidate structured and unstructured data into Snowflake, enhancing accessibility for downstream analytics and BI tools. - Collaborated with business stakeholders to define and implement data models that improved reporting precision by 15% and aligned with analytical goals. - Created optimized Power BI data models and datasets as part of the ETL workflow to support interactive dashboards and executive-level reporting. - Participated in GDPR compliance implementation by incorporating anonymization and access control into ETL processes, supporting enterprise data governance policies. - Fine-tuned ETL performance by optimizing queries, partitioning strategies, and job schedules, ensuring scalability and reliability of data pipelines.	

EDUCATION

Masters in Information Technology Valparaiso University, Valparaiso, Indiana	Aug 2023 – Dec 2024
Bachelors in Electronics and Communication Engineering TKR College of Engineering and Technology, Hyderabad, India	July 2014 – April 2018
