

SUMMARY

- Senior Software Engineer with deep expertise in **SDET, DevOps, and Quality Assurance**, specializing in the development of cloud-based solutions. Demonstrated technical leadership in architecting and implementing scalable solutions, ensuring high quality, and leveraging data-driven insights for efficient software delivery.
- Proficient in **Java, Python, JavaScript, Bash, Terraform, SQL, and Agile methodologies**.
- Drive efficiency and quality by **establishing tools and processes**, increasing automation coverage, optimizing CI/CD pipelines, implementing observability, integrating security tools for vulnerability detection, performance monitoring, scaling cloud infrastructure, and setting up alerting across systems.
- Expertise in developing scalable, **high-impact test automation frameworks for Web and Mobile**, covering API, UI, Unit, Integration, Security, Accessibility, and Performance testing of enterprise applications using technologies like Junit, TestNG, Selenium, Cucumber, Jest, Playwright, K6, JMeter, REST Assured, Appium.
- Proficient in providing **optimized CI/CD pipelines** using tools such as Jenkins, GitHub Actions, AWS CodePipeline, TeamCity, Docker, Kubernetes.
- Designed and implemented **scalable microservices and serverless (SaaS software) solutions** leveraging AWS services. Set up **observability and monitoring** for cloud services, application availability, and performance metrics generation using tools like SumoLogic, DataDog, ELK Stack, CloudWatch, Grafana.
- Experience in Data Engineering on **ETL and Big Data technologies**, including Kafka, Spark, Zookeeper, and Airflow, alongside analytical tools like MicroStrategy and Tableau, and ETL processes via Talend and Pentaho.
- Proven ability to lead and mentor teams, establishing a culture of excellence and innovation through effective communication, knowledge sharing, and a focus on continuous improvement.

TECHNICAL SKILLS

- **Programming & Scripting:** Java, Spring, Python, JavaScript, Typescript, Bash, XML, REST, GraphQL, SQL, Tomcat, Node.JS
- **DevOps & CI/CD:** Docker, Kubernetes, Terraform, Ansible, Jenkins, TeamCity, GitHub Actions, AWS CodePipeline, Git, SVN, Perforce, Ant, Maven, Make, NPM, YAML, Linux
- **SDET & Automation Frameworks:** Playwright, Selenium, Appium, TestNG, JUnit, Mockito, Jest, Mocha, Cucumber, Cypress, Mabl, Datadog synthetic tests, JMeter, K6, BlazeMeter, JConsole, REST Assured, SoapUI, Jira Xray, Sauce Labs
- **Cloud Technologies:** AWS (S3, EBS, EC2, VPC, Lambda, API Gateway, Cognito, Redshift, IAM, EKS, Route 53, ECR, ECS, Fargate, RDS, ELB, SSO, DynamoDB, Secrets Manager, CloudFront), Terraform
- **Monitoring & Security:** Sumologic, DataDog, Splunk, ELK Stack, Nagios, AWS CloudWatch, CloudTrail, Grafana, Rollbar, Synk, SonarQube, SSO, SAML, OWASP ZAP, AWS GuardDuty, JFrog Xray
- **Data Engineering:** ServiceNow, Kafka, Spark, Zookeeper, Airflow, Talend, Microstrategy, Tableau
- **Databases:** Amazon Redshift, Oracle, DynamoDB, Redis, MySQL, PostgreSQL, Databricks

PROFESSIONAL EXPERIENCE

Upstart Network Inc., USA | SDET & DevOps Lead | Nov 2021 - Present

Project: Upstart Auto Retail (UAR) product helps dealerships sell cars, through its unique combination of in-store customization for dealerships and online access for customers. Upstart provides AI-powered financing through UAR, so dealerships could offer affordable financing to more eligible customers.

- **Led DevOps, SDET and Release engineering initiatives** for Upstart Digital Auto retail products.
- Built **robust CI/CD pipeline solutions**, using **Github Actions**, that significantly improved deployment frequency and reduced time to market, utilizing self hosted GitHub runners, Docker, AWS ECR, ECS, Kubernetes, Terraform, JFrog Artifactory, NPM, YAML, Python and Bash for scalable, reliable delivery.
- Developed test automation scripts, leveraging the Node.js ecosystem (including tools like Selenium, Jest, Mocha, Mabl, **Playwright, AXE Playwright, Datadog synthetic tests, K6, Grafana**) to deliver efficient and reliable API, UI, Unit, Integration, Performance, Accessibility testing solutions.
- Established **observability capabilities** by designing and implementing logging, monitoring, alerting, and distributed tracing frameworks using **Sumologic, Datadog, Rollbar, Bugsnag, PagerDuty, CloudWatch**.
- **Led security testing efforts**, by integrating security and code quality scanning tools, Snyk, AWS GuardDuty, JFrog Xray, SonarQube, and ESLint into CI process.

Digital.AI Inc., USA | Senior Software Development Engineer | June 2020 - Oct 2021

Project: An AI-powered predictive analytics platform (**SaaS software**), fueled by AI and Machine Learning algorithms gets insights to make decisions and improve operational efficiency. These analytical dashboards are available in Microstrategy or integrated with-in ServiceNow platform.

- Led architectural design and hands-on implementation of **scalable microservices and serverless solutions** on AWS, leading the team in leveraging **AWS cloud services** -- EC2, S3, Lambda, ECS, EKS, Fargate, ECR, VPC, API Gateway, ELB, Route 53, Cognito, IAM, AWS SSO, KMS, Redshift, CloudFormation.
- Worked on programming/scripting languages - **Java, Python, Javascript, Bash**.
- Delivered custom solutions on **ServiceNow platform including workflow automation, administration, data imports, REST API integration, scripting**, and custom applications development.
- Provided **L2/L3 support for Big Data products**, effectively resolving complex customer issues while consistently meeting SLAs and maintaining high customer satisfaction.

Numerify Inc., India & USA | SDET & DevOps Engineer | March 2014 - May 2020

Project: BI Data modeling application is used to create metadata for analysis and design purposes. Data modeling includes designing data warehouse databases in detail, which includes - Top Down Approach, Fact Tables and Dimension Tables, Multidimensional Model/Star Schema, Support Roll Up, Drill Down, Logical and Physical Data Models, Model Granularity, Hierarchies. ETL jobs/process monitoring was integrated into this application.

- Implemented a **data-driven quality metrics and reporting system**, resulting in a **95% test automation coverage** of critical user flows. We achieved a **20% performance improvement** in our complex Business Intelligence (BI) modeling applications, a **30% reduction in critical defects**, and a significant improvement in security posture.

- Developed and maintained cloud-native **CI/CD infrastructure** utilizing **containerization (Docker, Kubernetes)** , integrating with build, release tools (**Jenkins, GIT, Maven, Bash, SonarQube**) on AWS.
- Worked on **end-to-end data engineering solutions**, which involves extracting data from diverse sources (ServiceNow, Remedy, Jira, Jenkins, databases, CSV) and processing with Apache Spark, Kafka, Airflow, Talend, Python, Java, Scala. Delivered actionable business intelligence insights using MicroStrategy.
- **Designed and developed scalable automation frameworks** for comprehensive end-to-end testing (API, UI, integration, unit, performance) using **Java, JUnit, Selenium, TestNG, AngularJS, JMeter, JConsole**, Protractor and REST Assured, resulting in improved product quality.
- Oversaw the **integration of MicroStrategy ESM SSO with diverse IDPs** (OKTA, PingOne, Azure Active Directory, LDAP) using SAML and SCIM, ensuring secure user authentication & authorization across the enterprise.

JP Morgan India Pvt Ltd., India | SDET & Developer | June 2009 - Feb 2014

Project : Market Risk Initiative (MRI) application is driven/executed by Market Risk Business Process Monitoring (BPM) that has capability to process LOB supply data and associated market, reference data on a daily basis. MRI application performs stress runs based on the scenarios provided by internal risk analysts and regulators.

- Built **Build & Release Automation Solution** using **Java, SVN, Perforce, Maven, Ant, Bash, Continuum** technologies, by enforcing standard conventions and best practices, resulting in a **60% increase in deployment frequency**. Onboarded all 50+ Risk Technology applications, adhering to audit specifics.
- Developed web applications using **Java, Spring, GWT, and Hibernate** on the JBoss server, and ensured code quality through unit testing with JUnit/JMock, **automated regression testing with Selenium (Java)**, and generating code coverage metrics using Cobertura/JaCoCo, integrated with SonarQube.
- Provided Proof Of Concept on various tools/technologies - Sahi, Fitnesse, TeamCity, uDeploy.
- **Leveraged Pentaho tool - which is a transformation tool, for automation of batch tests**, to schedule the tasks / plugged in the shell scripts / pl-sql procedures and automated the complete workflows.

EDUCATION

- **Sri Venkateswara University, India - B.S in Information Technology. (2002 to 2006)**
