SUMMARY

Software Engineer with **2 years** of experience in creating **interactive UI experiences** utilizing **React, JavaScript** and **Python**. Interested in building **scalable web applications**, enhancing **user experiences**, and exploring **AI-driven solutions**.

EXPERIENCE

TATA ELXSI, Bangalore, India

Software Engineer (WhiteHat Jr)

Apr 2021 – Sep 2022

- Shipped over **300 educational apps** (quizzes, games, interactive modules) using **Cocos2d** and **TypeScript**, making education accessible for **millions** of students.
- Built **frontend features** such as Authentication using **Firebase** and **Payment gateway** using **Razorpay** with **React**.
- Developed real-time sync for WhiteHat Jr's teacher-student apps using **WebSockets** (Socket.io) and **JSON**, enabling collaborative coding sessions with **<200ms latency** and handling **50K+ concurrent connections**.
- Debugged UI/UX issues through **peer code reviews, unit testing**, leveraging **Agile** to reduce QA-reported defects by **25%**.
- Minimized **manual file management efforts** and enhanced efficiency by **30%** by writing a **Python** code to **automate** the file extraction and streamline file replacement across directories.

Software Engineer (Jaguar Land Rover Corporation)

Nov 2020 – Apr 2021

- Achieved a **95% accuracy** in matching design specifications and reducing rework by **40%** by implementing **GUI** components in **Android Studio** using **Java** and **XML**.
- Designed **wireframes** and **prototypes** for **10+ screens** using **Figma**, and **version control** utilizing **Git** large file storage for keeping track of design iterations.
- Reduced development time for navigation widgets by **10%** and saved the team **20+ hours per sprint** by introducing **reusable code components**.
- Enhanced user satisfaction scores by **20%** by conducting a **usability testing** on infotainment systems **User Interface**.

PROJECTS

City Navigation and Emergency Route Planning | Python, React, Material UI, CI/CD

- Optimized an application using **OpenStreetMaps** and **Leaflet.js** in **Linux** to simulate emergencies and reroute vehicles using the **Floyd-Warshall algorithm**, enabling real-time updates and efficient path optimization during road blockages.

Stock Prediction | Python, Pandas, NumPy, Scikit-learn, Matplotlib

- Improved a stock price prediction system using **Python, Scikit-learn**, achieving **60.8% precision** with **analytical modeling, feature engineering** and **back testing**.

H1b web extension | Node.js, JavaScript, React, Tailwind, SQL, LLM, Generative AI, Claude, AWS

- Engineered H1B web extension using **React, Node.js**, and **SQL**, applying **OOPs concepts** to build **scalable Backend** services that aggregate **500,000+ H1B** records and enable efficient data retrieval through **RESTful APIs** and **AWS** deployment.
- Leveraged **Generative AI** and **LLMs** to summarize data, automate cleaning, while utilizing **MongoDB** to store user's resume data for easy retrieval and future access.

SKILLS and INTERESTS

Programming Skills: JavaScript, Typescript, Python, HTML, CSS, JSON, Java (for Android Development), C/C++

Databases: SQL, MongoDB, NoSQL, Firebase

Cloud and DevOps: AWS, CI/CD, Docker, Kubernetes

Frameworks and Tools: React, Node, Express, Redux, Git, Tailwind, Bootstrap, Android Studio, Figma, VSCode

EDUCATION

California State University Fullerton, California

Jan 2023 - May 2025

Master of Science in Computer Science || **GPA:** - 3.8

VNR Vignana Jyothi Institute of Engineering and Technology, India

Aug 2016 - Sep 2020

Bachelor of Technology in Electronics and Communication Engineering || **GPA:** - 8.3

OTHER EXPERIENCES

- Served as a **part-time Service Lead** in the **Tech Department** at **Titan Shops**, assisting with technical support and daily operations.
