Education

Colorado School of Mines, Golden CO	Dec 2024
Masters of Science in Data Science	GPA: 3.94
Carbon Capture, Utilization and Storage Graduate Certificate	
 Bachelor of Science in Computational and Applied Mathematics	May 2023
Minor: Data Science	GPA: 3.113

Professional Skills

Programming Languages: SQL, C++, Python, C, Github, openMP, MPI
Mathematical Software: R Statistical Computing Software, Matlab, LaTeX
Program Proficiencies: Microsoft Word Accessibility Tools, Adobe Acrobat Accessibility Tools, Microsoft Excel Macros, Microsoft Excel @Risk

Work Experience

Competitive Analysis Intern Scout Clean Energy, Boulder CO	May 2024 - Aug 2024
- Collected solar, wind, and energy storage data from competitors while working closely with the CFO to allow Scout to compare its energy production and growth to other businesses and gain understanding of the current energy market - Developed and applied a more detailed data collection methodology, which increased data reliability and provided deeper insights into market trends - Explored different options to move competitor data from Microsoft Excel to a dedicated data platform to enhance data analysis and improve data comprehensibility	
Construction Intern Colorado Department of Transportation, Denver CO	Dec 2023 - May 2024
- Enhanced project cost estimation through the proficient use of the Microsoft Excel add-on, @Risk, to model and evaluate the distribution of component costs for construction projects - Utilized advanced Excel Macros to systematically extract and compile data from multiple workbooks, streamlining the data analysis process and ensuring accuracy in decision-making - Effectively communicated with third-party contractors, systematically verifying and updating contact information to maintain accuracy and facilitate seamless collaboration	
Business Intelligence Intern, United Launch Alliance (ULA), Centennial CO	June 2023-Aug 2023
- Leveraged machine data from rocket manufacturing equipment to forecast maintenance downtimes in order to inform when preventative maintenance should be performed to minimize operational disruptions - Utilized SAP High-Performance Analytical Appliance (HANA) and Eclipse to learn and implement enhanced data queries, SQL procedures, and data manipulation - Employed R to efficiently process and analyze data to generate predictive models - Designed reports in SAP Business Objects (BOBJ) and Web Intelligence to provide comprehensive insight and clear data visualizations in order to increase factory production efficiency - Collaborated with stakeholders to gather requirements for the format and content of data reports - Initiated adoption of AI to enhance efficiency in navigating and retrieving data within large datasets
