

PROFESSIONAL WORK EXPERIENCE:

Software Engineer | Bectran Inc | Chicago, IL | Oct 2021 - Jan 2022, Apr 2024 - Present

- Developed a data consolidation service to consolidate end-customer data, grouping duplicate accounts under a unified profile using Java, Spring Boot, Hibernate, and MySQL, establishing entity relationships, and enhancing data integrity.
- Redesigned customer creation logic, eliminating duplication of end-customer accounts and reducing redundant customer entries by 40%, leading to increased efficiency and accuracy in data handling.
- Refactored UI using Angular & enhanced backend performance for Claims Management and Collections Unit Management modules. Leveraged Hibernate Statistics to resolve bottlenecks, achieving a 60% performance boost.
- Designed and implemented a Driver's License Verification microservice within the credit application workflow, enabling real-time identity validation via REST APIs, enhancing fraud prevention and streamlining the approval process.
- Integrated driver's license verification microservice into the automated credit decision workflow, reducing fraud applications.
- Re-engineered the report generation process by migrating to a dedicated microservice using Spring Boot and ActiveMQ for asynchronous processing, reducing system load by 15% and improving report generation efficiency.

Software Engineer | NCR Voyix | Atlanta, GA | Feb 2022 - Sept 2023

- Designed and implemented Java-based microservices to support payment processing and transaction management, enhancing scalability and maintainability of the system.
- Developed RESTful APIs using Spring Boot, facilitating seamless communication between microservices, third party platforms and external payment gateways.
- Spearheaded the development of features and resolution of bugs for two distinctive Windows-based products: RPOS (POS software) and Epsilon (payment processing software) utilizing C++ in an Agile setting, emphasizing Test Driven Development.
- Developed a feature for RPOS that enabled loyalty systems to apply rewards based on the quantity of units in a Multipack item.
- Led the design and development of a secure, encrypted card transaction feature in Epsilon for host simulator environment, ensuring robust and secure financial transactions.
- Executed automation using Python in a BDD framework, conducted manual testing involving installation, feature testing, troubleshooting, and bug identification for RPOS, Epsilon, and Fuel pumps software, leveraging Practitest for Test cases.
- Actively coordinated with clients and third parties, ensuring comprehensive end-to-end testing for the integration of a new EMV payment card in the system.

Java Full-Stack Developer, Tata Consultancy Services, Mumbai (TCS), India | June 2017 - June 2019

- Designed and developed a user-friendly web application in Java using the Spring framework, to enable the seamless uploading and updating of business-related data for pricing and location. Employed HTML, CSS, and JavaScript for front-end development. Implemented robust version control features for stored data, catering specifically to Admin users, and leveraged Hibernate for efficient database operations.
- Developed a Web portal in Java using Spring Boot in a team of three, that effectively consolidated cost and location analysis in the preexisting workflow and achieved a 50% improvement in operational efficiency.
- Facilitated seamless collaboration by implementing SOAP and RESTful web services for cross-functional integration.
- Developed and maintained PL/SQL procedures and functions to manage database operations in an Oracle environment.

SKILLS:

- **Languages:** Java, C++, JavaScript, Python, HTML5, CSS, Rust, Scala, SQL
- **Frameworks/Libraries:** Maven, Spring Boot, JSF, Hibernate, ActiveMQ, Behave BDD, Angular, Play 2
- **Web Services & Protocols:** RESTful APIs, SOAP, JSON, XML
- **Databases/Platforms:** MySQL, Oracle database, AWS, Google Cloud Platform (GCP), Apache Spark, Docker
- **IDE/Tools:** GitHub, Eclipse, Visual Studio, IntelliJ IDEA, VS Code, R Studio, Smallworld GIS, Putty, WinSCP

EDUCATION:

- Master's in Computer Science | University of Georgia | Athens, GA (GPA: 3.96/4.0) August 2021
- Bachelor of Engineering in Computer Engineering, University of Mumbai, India (GPA: 3.4/4.0) May 2017

PROJECTS:

FMRI Image processing on Spark and Serverless

June 2020 - December 2020

- Implemented distributed Rank-1 dictionary learning algorithm for FMRI Image Processing on a standalone machine, multi-node Spark cluster on the cloud, and Google cloud functions. Performed comparative analysis in terms of cost and execution time for standalone, multi-node Spark cluster and Google cloud function executions.

Food Ordering System (Database Management Course)

December 2019

- Built a full-stack web app with Angular, Play 2 framework, JDBC API, and MySQL for online food ordering.
- Designed and optimized the database schema using BCNF, 3NF, and UML, ensuring efficient data storage and normalization.
