

Summary

Detail-oriented Data Science graduate with specialized background in bioinformatics and hands-on experience in data engineering, machine learning, and business analytics. Proficient in SQL, Python, R, Power BI, and Tableau with experience in Azure Data Warehouse, Hadoop, Apache Spark, and ETL processes. Proven ability to translate large-scale datasets into strategic insights and actionable business recommendations. Strong communicator and collaborative team player with a passion for solving complex data problems across diverse industries.

Technical Skills

Languages : C,Python, R, SQL, PostgreSQL.

Big Data & Cloud : Azure Data Warehouse, Microsoft Azure, Google Cloud Platform, Hadoop, Apache Spark.

Analytics & Visualization Tools: Power BI, Tableau, Excel, Matplotlib, Seaborn, ggplot2.

Data Handling: Data Cleaning, Data Wrangling, Data Transformation, ETL Processes, Data Warehousing, Data Mining.

Automation : Microsoft Power Automate, Process Improvement, Process Optimization.

Development Tools: Jupyter Notebooks, RStudio, Git, GitHub, Microsoft Office 365.

Core Libraries: Pandas, NumPy, Scikit-learn, dplyr.

Statistical & Analytical Methods: Statistical Analysis, Predictive Modeling, Hypothesis Testing, Regression Analysis.

Soft Skills: Critical Thinking, Problem Solving, Attention to Detail, Technical Communication, Presentation Skills, Project Management, Time Management, Continuous Learning.

Education

kent State University , Kent OH

May 2025

MS in Data Science

Vignan Institute of Technology, India

July 2023

B.Tech in Bio Informatics

Experience

GATHI ANALYTICS

February 2023 - October 2023

Data Analyst Intern

Hyderabad

- Engineered comprehensive data integration workflows by collecting and processing datasets from diverse sources including relational databases, REST APIs, and structured file formats, ensuring data quality validation and accessibility across multiple business units.
- Developed scalable data processing solutions utilizing Hadoop ecosystem and Apache Spark frameworks for large-volume data transformation, implementing data cleaning and normalization procedures that improved processing efficiency and data consistency across enterprise datasets.
- Architected complex SQL query frameworks and automated ETL reporting pipelines within Azure Data Warehouse environment, leveraging cloud-native tools to streamline data workflows and reduce manual processing overhead by implementing scheduled data refresh mechanisms.
- Designed and deployed interactive Power BI dashboard solutions integrated with Azure Analysis Services, creating dynamic data visualizations and self-service analytics capabilities that enabled stakeholders to derive actionable business insights and support data-driven decision-making processes across organizational departments.

Projects

Secure Database-as-a-Service (DBaaS) Healthcare

- Built a secure DBaaS system with AES encryption, bcrypt authentication, and Merkle Trees for query integrity.
- Implemented role-based access control (admin vs restricted) and client-side key management to safeguard sensitive healthcare data.
- Designed a custom MySQL database with encrypted fields (e.g., age, gender) and ensured secure query handling.

AI-Based Customer Churn Prediction Telecom

- Built ML models like XGBoost, Random Forest, Decision Tree to predict customer churn with 93.3% AUC.
- Engineered features from a massive 70TB dataset covering calls, SMS, and internet usage.
- Processed large datasets using Hadoop & Spark, with key features engineered for retention insights.

Predictive Modeling of Life Expectancy (Gapminder Dataset)

- Developed predictive model using Lasso and Ridge regression on Gapminder dataset, achieving $R^2 = 0.85$ for global life expectancy forecasting.
- Performed comprehensive data cleaning, feature engineering, and missing value imputation on multi-decade country-level health and economic data.

- Identified key predictors impacting life expectancy through regularized modeling and created data visualizations using ggplot2 for pattern analysis.
- Evaluated model performance using RMSE, R^2 , and residual analysis to ensure predictive accuracy and reliability.

Brain Tumor Detection *MRI Images*

- Developed a classification model using SVM and Logistic Regression to classify pituitary tumors.
- Preprocessed MRI images, extracted features using HOG, and reduced dimensions using PCA.
- Achieved high accuracy in classifying tumor types, supporting early diagnosis.

Stress Detection Using Social Media

- Built a machine learning system using Python and NLP to identify stress indicators in Twitter and Reddit posts.
- Preprocessed text data and trained classifiers to detect emotional stress patterns.
- Collaborated with a cross-functional team to design an early-warning mental health tool.

Extracurricular / Certifications

Tata Group – Data Visualization: Empowering Business with Effective Insights.

NPTEL – Bioinformatics: Algorithms and Applications.

NPTEL– Problem Solving Through Programming in C.

- Introduction to Career Skills in Software Development
- Presented at Engineer's Day Tech Expo – September 2021
