

Praveen Krishna Mannam

GCP/AWS CLOUD ENGINEER

Dallas, TX | 469.238.5711 | PRAVEEN.MANNAM27@GMAIL.COM

Professional Summary

Result-driven Cloud Engineer skilled in architecting, deploying, and managing scalable, secure, and cost-effective cloud solutions on Amazon Web Services (AWS) and Google Cloud Platform (GCP). Proficient in infrastructure as code (IaC) using tools like Terraform and CloudFormation, as well as CI/CD automation, containerization (Docker, Kubernetes), and cloud security best practices. Proven ability to optimize performance, enhance system reliability, and reduce operational costs through modern cloud-native solutions. Strong background in DevOps practices, monitoring/logging (CloudWatch, Stackdriver, Prometheus), and scripting (Python, Bash). Adept at cross-functional collaboration, agile delivery, and ensuring high availability and business continuity in dynamic enterprise environments.

Experience

Cloud Engineer - AWS,GCP | Kaav Inc Las Vegas, Nevada (remote) November 2023 – Present

- Designed secure, scalable, and cost-optimized storage architectures across cloud platforms like AWS, GCP, or Azure
- Integrated AWS networking services (VPC, Direct Connect, VPN) to support hybrid cloud connectivity for telecom infrastructure, ensuring low-latency, high-availability communication across geographically distributed sites.
- Led intersection of cloud engineering, DevOps, and infrastructure automation. Cloud Storage Design and Architecture
- Analyzed application and business needs to design scalable cloud storage solutions
- Led in the selection of appropriate storage types (Object, Block, File) based on workload characteristics
- Defined region, redundancy, and availability settings aligned with RTO/RPO objectives
- Infrastructure as Code (IaC) Implementation
- Developed, tested, and maintained Terraform scripts to provision storage resources across cloud platforms (AWS, GCP, Azure)
- Utilized modular and reusable Terraform code following best practices
- Managed state files securely using backends like AWS S3 with DynamoDB or Terraform Cloud Security and Compliance
- Implemented encryption at rest and in transit using cloud-native features (SSE, CMEK, CSEK)
- Configured and managed IAM roles/policies, bucket ACLs, and access restrictions
- Ensured compliance with regulatory requirements (e.g., GDPR, HIPAA) by setting appropriate retention and access control policies
- Automation and Lifecycle Management
- Set up lifecycle rules for storage optimization (e.g., auto-archival, expiration)
- Automated transitions between storage classes based on access frequency and cost models
- Integrated storage provisioning in CI/CD pipelines for consistent environments
- Monitoring and Logging
- Enabled and managed access logs and audit logs for storage buckets

- Set up alerting and monitoring using tools like CloudWatch (AWS), Stackdriver (GCP), or Azure Monitor
- Implemented data usage metrics and dashboards for cost and performance visibility Cost Optimization
- Analyze storage usage to optimize for cost-efficiency (tiering, archival)
- Utilized labels/tags to track storage consumption across teams, projects, or departments
- Recommended changes based on cost reports and usage patterns Backup, Replication, and Disaster Recovery
- Implemented cross-region replication or multi-region storage for DR scenarios
- Designed and configured backup and restored mechanisms using Terraform or third-party tools
- Periodically validated restoration procedures Access Control and networking
- Configured private access paths using VPC endpoints or service perimeters
- Blocked public access unless explicitly required and approved
- Designed secure network paths to storage buckets for internal applications Documentation and Governance
- Maintained clear and updated documentation of storage configurations and policies
- Followed and enforced cloud governance models related to storage (naming, access, compliance)
- Reviewed and improved security posture through audits and code reviews Collaboration and Continuous ImprovementWork with DevOps, security, and application teams to meet project-specific storage needs
- Collaborated with telecom teams to modernize legacy voice and data systems by designing scalable, cloud-based solutions using Amazon Connect, SIP trunking, and real-time data processing with Kinesis and Lambda
- Up-to-date with new cloud storage features and Terraform modules

Senior Systems Engineer | Abbott Laboratories Mumbai, India January 2021 – May 2023

- Performed a variety of duties involving system testing of Web Application and/or Mobile Apps (Android and iOS).
- Led authored test procedures, conducted different types of test execution (Manual/Automated).
- Reported issues, re-test and also conduct functional, regression, exploratory and ad-hoc testing of the products.
- Assisted in the overall evaluation of the Product Quality.
- Applied knowledge of technical concepts and practices, and a complete understanding of product or systems fundamentals in a functional area, and working knowledge of other related disciplines.
- Performed this job in a quality system environment. Failure to adequately perform tasks can result in noncompliance with governmental regulations.
- Took Accountability for work performed
- Ensured a high-quality product was delivered to the customers by adhering to the Process (includes Regulations needs).
- Spent some minimal time keeping our Remote Care Systems lab in good condition with up-to-date equipment, software, etc.

Education / Certifications

Bachelor's in Electronics and Computer Science | KL University Vijayawada, India 2020

Masters in IT Management | Lindsey Wilson University, Kentucky 2024

Google Cloud Platform (GCP) Professional Cloud Architect

Google Cloud Platform (GCP) Associate Cloud Engineer

AWS Certified Solutions Architect - Associate

AWS Certified Solutions Architect - DevOps Engineer

Microsoft Certified Azure Solutions Architect Expert

CompTIA Cloud+

Skills & abilities

- IaaS, PaaS, SaaS, Serverless, Hybrid
- VPC, Subnets, Load Balancers, CDN, VPN
- IAM, Encryption, Firewalls, Compliance (GDPR, HIPAA)
- Reserved Instances, Auto-Scaling, Monitoring
- Compute Engine, GKE, Cloud Functions
- Cloud Build, Terraform, Operations Suite
- BigQuery, Pub/Sub, Dataflow
- EC2, Lambda, EKS, Fargate
- S3, EBS, RDS, DynamoDB
- CodePipeline, CloudFormation, CloudWatch
- Redshift, Kinesis, Glue
