

Karen Killeen

404-414-0393 | karenkilleen043@gmail.com | Atlanta, GA | [LinkedIn](#)

Dynamic Data Operations leader with 8+ years in B2B SaaS and Telecom, managing global teams and delivering scalable data quality, governance, and analytics solutions. Experienced in evaluating AI/ML outputs, validating model accuracy, and using unstructured data to improve algorithms and surface deeper insights. Skilled in building automated workflows, optimizing processes, and partnering across Product, Engineering, and customer-facing teams. Known for quickly mastering complex systems and driving improvements that enhance data reliability, efficiency, and business performance.

SKILLS

Data & Analytics Expertise

Data Analysis | KPI Development | Business Intelligence | Data Visualization | Financial Data | Supply Chain Data | Geospatial Data | Operational Data | Customer Experience Data | AI/ML Output Data | Unstructured Data | Forecasting | Reporting | Metrics

Data Quality & Governance

Data Quality Management | Data Integrity | Compliance | Data Cleansing | Data Preparation | Data Validation | Data Readiness | Monitoring & Alerting | Quality Assurance | AI Testing | Process Documentation | Root-Cause | AI Validation | Model Accuracy Testing | Algorithm QA | AI Quality Review | Model QA

Operational Excellence

Process Optimization | Automation | Pipelines | Incident Management | Change Management | Risk Management | Problem Solving | Scalable Framework Design | Process Mapping | Workflow Documentation | Workflow Design | Governance Documentation | SOP Development

Leadership & Strategy

Global Team Management (Latin America, Asia, Europe) | Strategy | Goal-setting | Roadmaps | Cross-Functional Alignment | Team Management | Communication | Coaching | Execution | Collaboration

Tools & Platforms

Excel | SQL | Tableau | Power BI | Python | Visual Studio | Jupyter | Linear | Notion | Figma | Jira | ServiceNow | VBA | SAS | GitHub | Snowflake | Looker | Talend | Domo | Microstrategy

LANGUAGES

Fluent Spanish

PROFESSIONAL EXPERIENCE

Dataplor

October 2024 - November 2025

Manager, Data Operations

- Leveraged Spanish skills and developed a global, cross-functional team of 13 Analysts and Engineers, driving large-scale data operations, quality initiatives, and customer issue resolution across multiple product lines.
- Owned the data quality and data operations strategy, defining governance standards, cross-functional processes, and long-term quality roadmaps that improved accuracy and reduced escalations.

- Developed and documented standardized data quality workflows, governance processes, and compliance requirements to support consistent, scalable operations.
- Oversaw end-to-end data quality management for a 450M+ POI dataset spanning 50+ attributes, ensuring accuracy, cleanliness, completeness, and consistency for enterprise customers and helping retain \$10M+ in revenue.
- Performed large-scale data analysis to support AI/ML model development, evaluated model outputs using unstructured data, and translated patterns into actionable insights to improve algorithms and feature engineering.
- Designed and implemented automated SQL/Python data validation workflows, reducing manual QA effort by 75% and enabling scalable, high-reliability data processing.
- Developed a continuous data quality assessment framework, pipelines, and validation rules that reduced defects and improved the reliability of delivered datasets.
- Worked cross-functionally with Product, Engineering, and Customer Success to define standardized data quality requirements, governance processes, and documentation.
- Drove cross-functional alignment on data governance, metric definitions, and reporting processes to ensure consistency across teams and systems.
- Proactively monitored data quality, performing SQL-driven root-cause analyses and implementing a triage system that reduced recurring issues and improved resolution time and customer satisfaction.

Intelsat

March 2020 - September 2024

Manager, Data Operations & Analysis (December 2023 - September 2024)

- Led and developed three global, cross-functional teams, Analysis, QA, and Operations, comprising a total of 15 personnel across the US, India, and Europe.
- Manage pre-production, post-production support and day-to-day operational support activities, ensuring alignment with business activities to ensure seamless operational transitions.
- Aligned QA and Post Production testing strategies with organizational objectives to enhance product quality and reliability.
- Identified opportunities within data operations for process optimization, transitioning tasks from other teams that could be handled more efficiently for business users
- Ensured organizational compliance with global data management policies and standards for data handling and record keeping.
- Monitored alerts for the Enterprise Data Warehouse to proactively address potential issues and ensure data integrity.
- Managed deployments and releases, ensuring smooth transitions and minimal disruption to operations.
- Fostered cross-functional integration between QA and Operations to expand responsibilities and improve issue resolution efficiency.
- Handled incoming support requests, incidents, and inquiries, adhering to service level agreements (SLAs) for timely resolution.
- Developed a unified request management system in Jira to streamline support processes and improve response times for process optimization
- Collaborated effectively with global IT teams and departments to resolve cross-functional issues and contribute to broader organizational projects.

Manager, Business Analytics & Intelligence (June 2021 - November 2023)

- Led a team of 4 Business Analysts delivering automation, actionable reporting, and organization-wide dashboarding; drove analytical strategy and data implementation across functions.
- Developed a five-year analytics roadmap, aligning data strategy, reporting initiatives, and cross-functional priorities to support long-term business growth and decision-making.
- Built and maintained integrated reporting systems and performance metrics (Network, Service, Vendor Availability), including a customer scorecard used by operations and executive leadership.
- Reduced operating error rate from 2% to <1% through data-driven reporting, process refinement, and cross-functional collaboration.
- Performed complex data analysis and root-cause investigations; coordinated change,

incident, and problem management processes to improve customer experience and KPI performance.

- Utilized ServiceNow for real-time reporting, workflow optimization, and ticket-process improvements in partnership with service operations and IT teams.
- Implemented automated distribution of dashboards and metrics; led ad-hoc analysis, insights delivery, and team skill development through workshops on new analytical tools.

Senior Analyst, Teleport Operations (March 2020 - May 2021)

- Developed clear and compelling Tableau dashboards to report performance at teleport level to drive process improvement.
- Lead monthly and weekly review calls across multiple teams for process gaps and solutions Automated reports leveraging Python and SQL
- Translated complex data into actionable insights for diverse audiences
- Prepare and present fact-based reports, dashboards, and recommendations.
- Develop metrics to accurately represent current state of teleport operations, such as time to fix and network availability.

Floor And Decor

March 2019 - February 2020

Senior Analyst, Supply Chain

- Analyzed and transitioned reporting to a new inventory platform, ensuring seamless integration and improved data accuracy for a leading flooring and decor retailer.
- Developed and documented ETL processes, created reports using Cognos 11.1, and implemented reporting functionality to enhance data accessibility.
- Spearheaded the development of new reports, leading to better decision-making and streamlined operations.
- Oversaw QA testing across multiple tools, ensuring high-quality standards and reliable inventory reporting.

Purchasing Power Company

January 2018 - February 2019

Senior Analyst, Financial Planning & Analysis

- Oversaw metric for sales and returns and supply chain.
- Analyzed returns to identify key drivers and make recommendations to improve KPIs.
- Developed interactive dashboards to communicate real time data to senior leadership
- Developed weekly and monthly reporting for returns and sales metrics. Develop forecasting tools for returns, demand, and ship cost.
- Identified trends and areas for improvement
- Conducted weekly and monthly meetings for status updates on returns and outbound ship cost
- Led analysts as a team to improve reporting procedures.

Peach State Health Plan

May 2017 - January 2018

Data Integrity Specialist

- Gathered business requirements from senior leadership, understood business logic to execute department needs
- Generated ad hoc reporting by use of Microstrategy
- Developed efficient reporting procedures for Provider Data Management with use of VBA macros
- Conducted data validation through SQL queries, vlookup, macros, and pivot tables
- Led data migration from EDW to SSMS by use of SSIS tool
- Created department reporting and dashboards for leadership

EDUCATION: Bachelor's in Mathematics - Ottawa University
