PROFESSIONAL SUMMARY

I am a dynamic senior software engineer with 10 years of experience in building robust applications across various platforms. I am proficient in a diverse tech stack including C#, .NET, Python, OOPS, AWS, and Google Cloud. I have led initiatives such as the Quote to Cash process using Celonis, leveraging Python and SQL for data extraction, transformation, and analysis. I also modernized legacy systems with .NET Core, achieving a 30% boost in process efficiency. Maintained .NET Core/ASP.NET applications in an Agile/Scrum environment. My work on cloud integrations and automated business processes has significantly enhanced operational performance, driving productivity gains by 25% across teams. I have experience with frontend technologies like React JS, JavaScript, Angular JS, HTML, jQuery, Kendo UI, and CSS3. My backend expertise includes developing with .NET Core framework, File Net API, C# and ASP.NET. Framework, MVVM, MySQL, LINQ, Stored Procedures, and MVC 5 applications. In cloud and DevOps, I have worked with Microsoft Azure, AWS cloud infrastructure, Docker, Kubernetes, Git, Jenkins, CI/CD pipelines, Apache Kafka, and Splunk.

Technical Skills:

Programming Languages: C# .NET, VB.NET

Web Technologies: ASP.NET, ASP.NET MVC 6.0/5.0/4.0/3.0, WPF, HTML5, CSS3, Bootstrap, JavaScript AJAX 3.0/2.0, Angular JS, Angular2/4/6,8,12,14,15,16 ReactJS, NodeJS, jQuery, Web Services, VB Script.

Xml Technologies: XML

IDE Tools: Visual Studio 2015/2012/2010/2008, SQL Server Management Studio, SQL Server Management R2, MSMQ.

.Net Frameworks: MS.Net Framework 4.5/4.0/3.5/3.0

Databases: My SQL Server 2014/2012/2008 R2/2008/2005, NoSQL, PostgreSQL, MS Access, Couchbase, Oracle11g/10g/9i/8i, MongoDB, RDBMS

Reporting Tools: MS Access, MS Excel, Crystal reports 9.0, SSRS, SSIS. Modeling Tools: UML, MS Visio 2010/2007, MS Office

Version Control Tools: MS Team Foundation Server (2012/2010/2008), Visual Safe Source, GIT, GitHub, Source Tree, Telerik.

Middleware: WCF, ADO.NET 4.5/4.0/3.5/3.0/2.0, Enterprise Library 5.0/4.0/3.1

Servers: Windows Server 2008/2003/NT, Linux/Unix, Microsoft IIS (7.0/6.0/5.0/4.0)

Education Details: Bachelor's in Computer Science from Cambridge University India 2014

Master's in Computer Science from

California University USA 2016

PROFESSIONAL EXPERIENCE

Workday, Pleasanton, CA

Apr 2022 – Till now

Sr Software Engineer Responsibilities:

- Led the development of process mining and process management within Workday for the Sales Operations team.
- Designed, developed, and maintained scalable web applications using ASP.NET MVC / ASP.NET Core.
- Used C# async/await for asynchronous processing to improve application responsiveness and scalability.
- Enhanced sales cycle efficiency by 30% through process mining and management initiatives for the sales Operations team at Workday, utilizing Python and SQL to analyze data and create reporting dashboards that visualized financial performance.
- Consumed data processed by Informatica ETL pipelines within ASP.NET Core web applications for business reporting, dashboards, and APIs.
- Developed desktop applications using WPF, MVVM pattern and .NET 6, improving UI responsiveness.
- Deployed .NET Core / .NET 6+ applications on Linux/Unix environments,

enabling cross-platform backend services.

- Implemented AJAX calls using jQuery and JavaScript to enhance responsiveness and improve user interactivity in ASP.NET web forms and MVC views.
- Created reusable, modular React JS components with hooks and state management (using Redux, or Context API).
- Maintained enterprise-level applications using .NET (C#) and T-SQL, integrating complex stored procedures for data operations.
- Automated data processing workflows by integrating .NET services with PowerShell scripts and external systems.
- Managed and administered AWS cloud infrastructure, including provisioning resources, configuring networking components, and maintaining system reliability.
- Implemented form validation, lazy loading, and reactive forms in Angular to enhance user experience and performance.
- Refactored legacy .NET code to follow OOPs principles, improving readability and reducing bugs caused by tight coupling and poor cohesion.
- Utilized Docker to containerize .NET backend and TypeScript frontend for streamlined local development and cloud deployment. Migrated legacy MVC Razor pages to Blazor components, reducing maintenance costs.
- Created serverless .NET AWS Lambda functions for background processing, scheduled tasks, and event-driven architecture triggered by EC2, S3, SQS, or API Gateway.
- Spearheaded the development of the Alpha Lab within Workday in collaboration with internal teams, enabling employees to build and test prototypes using ASP.NET Core framework for slack bot development.
- Integrated NGINX with Docker/Kubernetes for containerized .NET microservices deployments.
- Ensured adherence to SOLID principles and utilized design patterns to improve unit test coverage across service and business layers.
- Integrated WCF services with client applications (ASP.NET MVC, Windows Forms, or external systems) using service references and custom endpoints.
- Worked with cross-functional teams to develop end-to-end data integration pipelines using .NET, SSIS, and SQL Server, supporting enterprise Power BI and reporting needs.
- Automated ETL workflows using .NET and SSIS, enabling reliable and high-performance data movement between transactional and reporting systems.
- Integrated .NET applications with RDS (SQL Server) on AWS and handled data backups, replication, and stored procedures in a cloud environment.
- Automated report generation and distribution through SSRS subscriptions and custom C# utilities, reducing manual reporting. Created stored procedures, functions, and views to support C#-based data access logic.
- Integrated secure authentication and authorization flows in ASP.NET Core applications using OAuth 2.0 and OpenID.
- Migrated legacy .NET components to Node.js services for improved performance, scalability, and developer productivity.
- Implemented JWT token-based authentication and role-based authorization using ASP.NET Core Identity and Angular route guards.
- Automated infrastructure provisioning for ECS/EKS clusters using Terraform and AWS CloudFormation and deployment of .NET microservices, MongoDB, Elasticsearch, and RabbitMQ using Docker and Kubernetes.
- Spearheaded the creation of the Quote to Cash process in Celonis, utilizing Python and SQL to extract, transform, and analyze data.
- Built multi-tenant systems using Cosmos DB containers with appropriate partitioning and throughput provisioning.
- Employed Agile SDLC methodologies and Git for version control in a CI/CD environment, utilizing Splunk for monitoring to optimize data flow, enhance system performance, and ensure smooth operation of connected platforms.
- Improved system reliability and connectivity across cloud environments by managing and administering AWS cloud infrastructure, provisioning resources, configuring networking components, and integrating applications with AWS and Apache Kafka.

U.S Bank, Pleasanton CA Remote

Apr 2021 – Apr 2022

Sr Software Engineer Responsibilities:

- Responsible for developing File Net -Content Management System (FN-CMS) which is the component that offers enterprise-level scalability and flexibility to handle the most complex content management challenges by using .NET Core framework
- Led the containerization of applications using Docker and deployed them on Kubernetes, reducing deployment time by 25% and increasing system reliability.
- Designed microservices using both .NET Core and Node.js within a distributed system architecture using Docker and Kubernetes.
- Integrated RESTful APIs and gRPC services with Blazor front-end, enabling seamless data synchronization between client and server.
- Implemented secure, tokenized payment flows (PCI-DSS compliant) using .NET and REST/SOAP APIs for external payment providers.
- Integrated Azure Blob Storage, Cosmos DB, and Azure SQL Database for scalable data storage solutions.
- Utilized Git for version control to manage source code, collaborate with team members, and implemented CI/CD pipelines using Jenkins to automate builds, tests, and deployments.
- Optimized front-end to back-end communication with AJAX JSON requests, improving page load speed by 30% in a multi-user enterprise application.
- Deployed and managed cloud applications using Azure App Services, Azure Functions and Azure Kubernetes Service (AKS).
- Implemented SSL/TLS termination on NGINX to secure .NET applications and ensure HTTPS communication.
- Integrated .NET APIs with third-party identity providers (Azure AD, Okta, Auth0) via OAuth 2.0 for Single Sign-On (SSO) across multiple applications.
- Collaborated with InfoSec and audit teams to address SWIFT CSP attestation and security control enforcement across .NET services.
- Integrated ASP.NET Identity with C# to manage user authentication and role-based authorization.
- Implemented test automation strategies within the development process, enhancing code quality and reliability across applications and contributing to faster deployment cycles.
- Used asynchronous programming and bulk execution techniques to improve Cosmos DB interaction performance in .NET.
- Supported interoperability by exposing WCF endpoints compatible with Java and third-party systems via standard SOAP bindings.
- Integrated Razor views with Entity Framework Core for seamless CRUD operations against SQL Server and PostgreSQL databases.
- Used .NET (C#) to dynamically trigger SSIS packages and handle success/failure scenarios with custom logging and notification.
- Automated tasks and background jobs (e.g., file processing, data cleanup) using Python, orchestrated and scheduled from .NET backend systems.
- Integrated T-SQL scripts into .NET applications using ADO.NET and Entity Framework, ensuring secure and efficient data access.
- Built dynamic dashboards in ASP.NET Core MVC, consuming data from SSRS reports via Report Viewer and web services, enabling real-time business insights.
- Built advanced search and indexing features by integrating Elasticsearch with .NET APIs, reducing query response times.
- Optimized system architecture through strategic use of design patterns and implemented integrations using File Net API, significantly enhancing system performance and code maintainability.
- Enhanced integration capabilities for data ingestion by studying system requirements and implementing integrations using File Net API and US Bank Standard API.
- Automated deployment and service management using Bash shell scripts and system for .NET applications on Linux.
- Enhanced incident response and database reliability by implementing monitoring and troubleshooting protocols for SQL databases and backend applications, ensuring high availability for enterprise SaaS services.

Brenner Fiedler and Associates, Riverside CA

May 2017 – Mar 2021

Application Developer Responsibilities:

- Led the design and development of automated business processes by collaborating with staff and consultants on business productivity projects, working within the Software Development Life Cycle (SDLC) to ensure structured development.
- Improved operational efficiency by 25% through the design and implementation of a custom CRM application using C# and ASP.NET Framework, integrating JavaScript for dynamic user interfaces and real-time data processing. This enabled seamless integration of data into the Prophet 21 Sales Management tool via XML Web Services
- Played a key role in driving and generating ideas to enhance business process flows within the company's ERP system, Prophet 21, improving overall efficiency and operational performance.
- Implemented serverless .NET Core applications on AWS Lambda, integrating with API Gateway, S3, and DynamoDB for cost-effective, event-driven workloads.
- The solution was adopted by both the Sales and Customer Service teams, streamlining workflows, enhancing cross functional collaboration, and improving data accessibility across departments
- CRM application replaced the outdated system that required manual updates via a Windows device, taking 7-8 hours to sync with Prophet 21.
- RESTful APIs in ASP.NET Web API, consumed asynchronously via AJAX in client-side scripts to update UI components.
- Automated deployment of .NET applications using PowerShell scripts integrated with CI/CD pipelines (Azure DevOps / Jenkins).
- Refactored legacy codebase to introduce appropriate design patterns, reducing technical debt and improving testability.
- Conducted performance tuning and indexing for stored procedures to enhance data retrieval efficiency in high-volume transaction environments.
- Increased overall productivity and system reliability by automating data synchronization and integrating robust error handling, using principles aligned with Java and JavaScript development best practices.
- Ensured scalable and reusable codebase by adhering to software engineering best practices such as code reviews, unit testing, and componentization using JavaScript frameworks including React JS and Angular JS.
- Working on developing Dyna Change Rules (DCR) which are specific to Prophet 21 software which utilizes rich visual components using WPF. The DCR is used to customize the software for company use. WPF is used to currently take advantage of application development features which include application models, control graphics, data binding, layout.
- Designed, developed, and implemented an Accounts Payable Transaction Processing System which is used throughout the company to track the expenses done throughout the month. This web application automates the accounting performed by the employee, which reduces the processing time to update the transactions to Prophet-21(ERP System) by roughly 2 hours a day. The process involves uploading the monthly transaction(excel), the system uses a CSV Helper which identifies each record and then creates an XML for each record in excel and finally this xml is matched with the PDF invoices and compared for correct data and entered the system using Optical Character Recognition.
- Uses C# Asp.Net MVVM framework, MySQL, LINQ, Stored Procedures, JavaScript, jQuery, CSV Helper.

Gympik Health Solutions, Bengaluru, India

Jan 2014 – Feb 2015

. Net Full Stack Developer Responsibilities:

- Worked as a C# Developer for a Website called www.gympik.com.
- Extended ASP.NET, MVC 5 application by creating Views, Controller actions and model classes.
- Used C#.NET as language to develop code behind business logic.
- Designed parameterized SSRS reports with cascading filters and integrated them into .NET applications for user-specific data access.
- Involved in gathering and preparing the Software Requirement Specification UML creation was involved throughout the entire process which involved creating sequence diagram, Use Cases and Class Diagrams which implement UML.

- Responsible for client-side UI Validation which also involved implementing business logic as per user selection using jQuery UI and Angular JS.
- Mentored junior developers on effectively applying object-oriented patterns like composition over inheritance in real-world .NET projects.
- Implemented data binding, dependency injection, and state management in Blazor to deliver real-time updates without full page reloads
- Worked on containerized deployments where Python scripts and .NET services ran in isolated Docker containers and communicated via internal networks or APIs.
- UI Screens were developed using HTML, JavaScript, AJAX, jQuery, Kendo UI components and CSS3.
- Implemented authentication and authorization using the Web. Config files and configures user's authorization and role based security.
- Tuned ASP.NET Core applications for Linux environments by optimizing GC, thread pools, and configuring resource limits at the OS level.
- Implemented asynchronous service operations in WCF to enhance scalability and responsiveness.
- Developed queries using TSQL statements, views, functions, stored procedures, and triggers to perform CRUD operation to the data and convert them into relational tables and consumed them in entity ORM.
- Involved in the Design of the application using ASP.NET, Entity Framework and LINQ to SQL. Used the Object-Oriented Programming techniques and created classes and its interfaces.
- Used Telerik controls like auto-complete textboxes, file uploading for rich user experience. Extensively used Exception handling application block from Microsoft for exception handling.
