Summary

System Engineer with 5+ years of experience designing, automating, and securing cloud and on-prem infrastructures. Skilled in AWS, Azure, Linux, Windows Server, Terraform, Ansible, and CI/CD pipelines. Expertise in system performance optimization, infrastructure automation, and incident resolution across hybrid environments. Strong background in monitoring, virtualization, and security hardening, ensuring high availability, compliance, and operational excellence for large-scale enterprise systems.

Skills

Programming & Scripting: Python, PowerShell, Bash/Shell Scripting, YAML, JSON, Automation Scripts, REST API Integration, Ansible Playbooks, Infrastructure as Code (IaC), Configuration Management

Operating Systems & Server Administration: Windows Server (2016/2019/2022), Linux (RHEL, CentOS, Ubuntu), Active Directory, Group Policy, DNS/DHCP, File & Print Services, Patch Management, Remote Desktop Services, VMware vSphere, Hyper-V, SCCM, WSUS

Cloud Platforms & Virtualization: AWS (EC2, S3, IAM, CloudWatch, Lambda), Microsoft Azure (VMs, AD, Key Vault, Monitor), GCP (Compute Engine, IAM), Office 365 Administration, Exchange Online, Intune, MDM, Virtual Networks, Load Balancers

Networking & Security: TCP/IP, VLAN, VPN, DNS, DHCP, Firewalls (Cisco ASA, Palo Alto), IDS/IPS, Endpoint Protection (CrowdStrike, Defender), SIEM (Splunk, QRadar, SolarWinds), SSL/TLS, Zero Trust, MFA, Vulnerability Management (Nessus, Qualys), Security Hardening

Monitoring, Automation & DevOps Tools: Terraform, Ansible, Jenkins, GitHub Actions, Docker, Kubernetes, Nagios, Zabbix, Grafana, Prometheus, ServiceNow, ITIL Framework, Backup & Recovery (Veeam, Acronis), System Performance Tuning

Professional Experience

System Engineer, Salesforce

Aug 2023 – Present | Remote, USA

- Implemented and optimized Linux-based infrastructure on AWS for Salesforce internal DevOps environments, automating provisioning through Terraform and maintaining security compliance with CIS benchmarks and IAM policies.
- Integrated monitoring solutions using Prometheus, and CloudWatch to enhance visibility across 250+ application nodes, improving alert accuracy and reducing false positives by 31%.
- Developed PowerShell and Python automation scripts to streamline patch deployment and service restarts, decreasing manual intervention time and enhancing uptime consistency across distributed production systems.
- Supported CI/CD pipelines using Jenkins and GitHub Actions, ensuring seamless integration, automated rollback configurations, and dependency management for critical Salesforce microservices.
- Configured and maintained reverse proxies, SSL/TLS certificates, and load balancers on NGINX, strengthening endpoint security and achieving faster response times for API-driven applications.
- Performed root cause analysis for system outages, collaborated with SRE and CloudOps teams to implement resilience improvements that reduced incident recurrence rate by 24% over two quarters.

Associate System Engineer, IBM

Sep 2018 – Dec 2021 | Kolkata, India

- Designed and implemented Windows and Linux server environments for a global retail client, ensuring high availability, optimized resource allocation, and secure access control through automated patch deployments.
- Configured Active Directory, Group Policy Objects, and DNS infrastructure across 500+ user endpoints, improving authentication reliability and reducing account-related incidents by 23% within three quarters.
- Automated OS provisioning and configuration tasks using PowerShell and Ansible, enhancing deployment consistency and cutting manual effort by nearly 40% across multiple test and production environments.
- Managed virtualization platforms using VMware vSphere and Hyper-V, performing capacity planning, snapshot management, and performance tuning to maintain optimal uptime across critical client workloads.
- Deployed and monitored SIEM dashboards in Splunk to identify security anomalies, ensuring early incident detection and compliance alignment with client-specific audit and data retention policies.
- Supported migration of legacy on-prem systems to AWS EC2 instances, optimizing cost efficiency through instance right-sizing and resource tagging for accurate billing management.
- Performed disaster recovery simulations and managed Veeam backup schedules, validating restore processes quarterly to ensure reliable data recoverability and minimal downtime for mission-critical workloads.

Education

Master of Science in Computer Science, California State University East Bay

Jan 2022 – Dec 2023 | Hayward, USA

Bachelor of Engineering in Computer Science, G. Pullaiah College of Engineering and Technology

Jun 2014 – May 2018 | India

Publication

Survey on Security Issues and Security Storage in Cloud: This article focuses on the types and the security challenges Encountered in cloud services and storage services, offering a valuable contribution to this critical research field. I investigated Cloud security challenges and contributed to the ongoing discourse about the intersection of cloud computing and security.
