## EDUCATION

**Georgia Institute of Technology**  
*Bachelor of Science in Computer Science*

May 2026  
Atlanta, GA

## TECHNICAL SKILLS

**Languages:** Java, Python, Go, SQL, JavaScript, HTML, CSS, MATLAB, GraphQL, PHP, C  
**Frameworks & Tools:** Node.js, React, Django, MongoDB, NumPy, MySQL, Git, Linux, Kubernetes, AWS

## EXPERIENCE

**Meta** May 2025 – August 2025  
*Software Engineer Intern* Seattle, WA

- Implemented **React** UI components and backend services in **Hack/PHP/GraphQL** to build end-to-end product features, resulting in faster iteration and improved customer-facing functionality
- Developed and integrated five debugging tools into an internal AI sales web app to consolidate data from multiple APIs and **SQL** sources, leading to a single, store-agnostic interface that cut debugging time by 80%
- Automated data integrations with **Python** and **SQL** to reduce manual troubleshooting and improve data accuracy, resulting in higher reliability and smoother product data management
- Created scalable data management and testing solutions (CRUD features, one-click fixes, and unit tests) to improve reliability and track product data, achieving 85%+ test coverage and strengthening system stability

**Workday** May 2024 – August 2024  
*Site Reliability Engineer Intern* Atlanta, GA

- Automated outage resolution processes with **Python**, **Go**, and **Bash** to accelerate incident repair times, reducing disruption recovery by 24%
- Developed workflows and health-check functions in **Go** to address recurring errors and monitor internal cloud resources, enhancing reliability and minimizing downtime before critical operations
- Contributed to live SRE operations with **Kubernetes** and **AWS** to restore product functionality across multi-tenant environments, supporting 100+ customers during incidents
- Migrated 200+ legacy API calls to a modern **Python/Go** platform with **Linux** system integrations to improve scalability enabling direct manipulation of tenant resources reducing manual intervention by 30%

**Georgia Tech Glacier Geophysics Group** December 2023 – May 2024  
*Undergraduate Research Assistant* Atlanta, GA

- Incorporated the calculations for melting rates, thickness, and density of glaciers using **MATLAB** and **Python**, improving the accuracy of glacier models by 30% for research on global warming in the Antarctic
- Developed data visualization dashboards using **Python**, allowing for easier data interpretation
- Enhanced data analysis methods using insights from research, resulting in more accurate outcomes

**Georgia Tech Automated Algorithm Design Lab** January 2023 – May 2024  
*Undergraduate Researcher* Atlanta, GA

- Implemented machine learning models: classification, regression, etc, while aiming to reduce latency and runtime
- Created an internal tool allowing for the adaptation of algorithms by mutating the algorithms within "islands" and migrating algorithms across islands for improved results, improving data accuracy by 6%
- Worked with high-performance computing platform PACE to run machine learning programs to solve problems such as breast cancer classification

## PROJECTS

**IBM Accelerate Program - Software Engineering Track** June 2024 – July 2024

- Developed a project management application using **HTML**, **CSS**, **JavaScript**, and **Node.js**
- Deployed applications on IBM Cloud and integrated user authentication to enhance security
- Gained mentorship from IBM engineers on software development best practices, career growth, communication
- Collaborated in an Agile environment, delivering high-quality solutions across the full-stack
