WORK EXPERIENCE

American Technology Initiative Inc. Data Engineer	Remote, USA Jan 2025 - Jun 2025
- Implemented a knowledge search platform using Azure OpenAI, AI Search, Azure ML Prompt Flow to summarize enterprise documents, PDFs, emails optimizing with vector indexes and integrating LLM - Developed an API to track and monitor SQL queries, enhancing performance by evaluating metrics & caching	
Bank of New York Mellon Big Data Engineer	New York Dec 2023 - Dec 2024
- Engineered scalable batch data pipelines using GCP, Python, Airflow to analyze 4 PB of clickstream financial data across platforms. Migrated ETL process from legacy Pig to BigQuery - Reduced pipeline latency by eliminating Dataproc clusters, saving \$100,000 monthly cloud costs. Decreased average job runtime from 1 hour to 18 minutes, drastically improving SLA (by 2+ hrs) - Led advanced statistical analysis, data validation, root cause analysis cutting issue resolution time by 15% - Collaborated with stakeholders to architect ELT pipelines, design data models, and Looker dashboards, driving actionable insights for performance monitoring, market trends, and targeted investment strategies - Assisted in ML time-series models to forecast short-term cash positions and liquidity gaps	
Larsen and Toubro Infotech Data Engineer	India Oct 2020 - Sep 2022
- Implemented Azure Data Factory pipelines for seamless batch data migration from multiple sources to Snowflake and Azure Synapse Analytics, saving client's cost by 25% - Automated large-scale data processing with Databricks and PySpark transformations. Leveraged Azure Logic apps, Azure Key Vault for data security and troubleshooting workflows boosting 70% pipeline reliability - Optimized complex SQL/HiveQL queries by indexing, joins, partitioning, reducing response time by 60% - Designed Snowflake Schema and created scripts for slowly changing dimensions (SCD1, SCD2) - Deployed CI/CD pipelines for DEV, QA, PROD migration. Ensured stability through active load balancing - Empowered data-driven decisions with 20+ Power BI reports and dashboards on 30TB+ data - Collaborated directly with clients and SMEs to gather detailed requirements and prioritize product features	

PROJECTS

Parking Violation Analytics Using Hadoop Ecosystem
Implemented Google Cloud Dataproc to process 5 Million tickets using HiveQL for trend analysis. Designed HBase schema for fast lookups, enabling insights that supported 10% ticket recovery boost
Customer Sentiment Analysis using Gemini Multimodal Model (GCP)
Implemented a real-time analysis pipeline using AI and NLP of Gemini to classify customer feedback as positive or negative. Built a ML pipeline using Python, Cloud Storage, Cloud Functions, and BigQuery

EDUCATION

Pace University Master of Science in Data Science GPA: 3.88/4	New York, NY May 2024
---	-------------------------

SKILLS

Languages:	Python, C, C++, SQL, T-SQL, PySpark, DAX, PowerShell Script
Databases:	Snowflake, BigQuery, MySQL, MS SQL, PostgreSQL, Azure Synapse Analytics, MongoDB
Cloud Platforms:	Azure, GCP, AWS, Databricks, Power BI, Looker, Airflow
ML Libraries:	Pandas, PyTorch, TensorFlow, Scikit-Learn, Time-series models, Neural network
Big Data Tech:	Apache Hadoop, Hive, HBase, HDFS, Kafka
Tools:	Jupyter, Jira, MS Excel, RapidMiner, Version Control(Git, GitHub)

- Spearheaded 3 large-scale events of Quality Engineering Foundation (non-profit org Quality & AI)
- Co-ordinated as lead developer and mentored a team of 7 new associates at Larsen and Toubro Infotech
- Microsoft certified Azure Data Scientist Associate DP-100, Artificial Intelligence AI-900, DP-900, AZ-900
