

Darshini Macha

Michigan, USA|+1 (469) 623-0515| darshinimacha11@gmail.com

SUMMARY

- Data Analyst with 3+ years of experience in financial services, operations, and marketing analytics.
- Expertise in SQL, Python, R, Tableau, Power BI, and advanced Excel for data-driven decision-making.
- Strong background in predictive modeling, statistical analysis, EDA, KPI tracking, and automation.
- Experienced in cloud platforms (AWS, Azure, GCP) and modern data warehousing (Snowflake, Redshift).
- Skilled in ETL pipelines, data engineering workflows, and big data processing (Hadoop, Spark).
- Proven ability to develop dashboards, optimize business processes, and deliver actionable insights.

TECHNICAL SKILLS

- **Data Analytics & Visualization:** SQL, Python (Pandas, NumPy, Matplotlib, Seaborn), R (ggplot2), Tableau, Power BI (DAX, Power Query), Excel (Power Pivot, VBA)
- **Machine Learning & AI:** Scikit-learn, Regression, Classification, Clustering, Predictive Modeling, A/B Testing
- **Data Engineering:** dbt, ETL (Alteryx, SSIS, Talend, Python automation), PySpark, Airflow
- **Cloud & Databases:** AWS (S3, Redshift, Athena, CloudWatch), Azure, GCP, Snowflake, MySQL, PostgreSQL, SQL Server, Oracle, MongoDB, Cassandra
- **Big Data & Frameworks:** Hadoop, Hive, Spark, Agile/Scrum
- **Other Tools:** Git, JIRA, SAP Business Objects, Flask

WORK EXPERIENCE

Freddie Mac

Data Analyst

United States

January 2025 – Present

- Performed detailed EDA on large, complex financial datasets to identify revenue trends, emerging risk patterns, and operational inefficiencies, providing insights that strengthened strategic and compliance-driven decisions.
- Designed and implemented Power BI dashboards that visualized credit-risk metrics, portfolio performance, and customer behavior, reducing manual reporting effort and improving analytics efficiency by 15%.
- Enhanced financial data integration pipelines using Snowflake by optimizing warehouse structures, improving data refresh processes, and ensuring smoother access to cross-functional reporting datasets.
- Built predictive models for credit-risk scoring, loan default probability, and cash-flow forecasting using Python, improving forecasting accuracy by 30% and supporting more informed portfolio planning.
- Optimized MySQL databases through improved schema design, query tuning, and automation using stored procedures and UDFs, improving reporting accuracy and reducing manual intervention.
- Led development and tracking of KPIs for customer acquisition, loan performance, digital engagement, and operational effectiveness, improving executive visibility and performance monitoring.
- Executed correlation, segmentation, and variance analyses to support improvements in digital banking workflows, enhancing customer experience and engagement.
- Delivered weekly dashboards and ad-hoc analytical reports to portfolio managers and leadership, supporting data-driven operational and financial decisions.

Streebo Inc

Data Analyst

India

June 2020 – December 2022

- Engineered optimized SQL queries and automated data extraction workflows across multiple relational systems, significantly improving reliability, data accuracy, and processing efficiency.
- Developed and validated data models using R and SQL to enhance data integrity and improve accuracy across operational and financial reporting pipelines.
- Created interactive Power BI and Excel dashboards that visualized KPIs, financial performance trends, and customer behavior, enabling faster and more effective decision-making for business stakeholders.
- Designed and managed ETL workflows using SSIS and Talend, integrating SAP, Oracle ERP, and CRM data sources into standardized reporting environments.
- Performed A/B testing, segmentation, and correlation analysis to optimize marketing strategies and improve campaign targeting and engagement.
- Supported predictive modeling projects using Python (Scikit-learn) for churn prediction, customer segmentation, and behavior forecasting.
- Conducted variance and trend analysis to identify inefficiencies in onboarding and operational workflows, leading to improved process performance.
- Delivered weekly KPI dashboards, monthly performance summaries, and detailed ad-hoc insights to leadership teams.
- Analyzed CRM datasets to uncover retention drivers and optimize targeting strategies, resulting in a 25% improvement in customer retention.

EDUCATION

University of North Texas,
Masters in Information Systems and Technology

Denton, Texas
Dec 2024
