

Sahithi Reddy Kalijavedu

(616) 808-4039 | sahithi.03789@gmail.com

EDUCATION

Grand Valley State University

Master of Science in Computer Science

Grand Rapids, MI

Institute Of Aeronautical Engineering

Bachelor of Technology in Electronics and Communication Engineering

Hyderabad, India

TECHNICAL SKILLS

Programming Languages: SQL, Python, SAS

Frameworks & Databases: dbt (testing, documentation, lineage), Snowflake, SQL Server, PostgreSQL, Oracle DB

Cloud & DevOps: Azure (Data Factory, Synapse, Blob Storage), AWS (S3, Glue, Redshift); Git, GitHub, Azure DevOps

Reporting & Visualization: Power BI, Excel, Tableau, Workday.

Data Analysis: Descriptive & inferential statistics, hypothesis testing (t-test, ANOVA), correlation & regression, sampling, data quality validation, trend analysis, ad-hoc reporting

Data Governance & Documentation: KPI standardization, metadata management, lineage tracking, data dictionary maintenance, version control with Git

Ecosystem Familiarity: Banner, Slate, Workday HCM/Finance

Web (Preferred): HTML, CSS, JavaScript, jQuery

Summary

Detail-oriented **Data Analyst** with around 4 years of experience in turning complex data into clear, actionable insights across finance, healthcare, and enterprise environments. Skilled in **SQL, Python, Power BI, and Snowflake**, with hands-on experience in **Azure Data Factory, dbt, and Databricks** for end-to-end data integration and automation. Adept at applying **statistical analysis and data visualization** to support business decisions, improve data quality, and enhance reporting efficiency. Known for blending strong analytical thinking with business understanding to build trusted, scalable, and well-documented reporting solutions.

WORK EXPERIENCE

Principal Financial – Data Analyst

Jul 2024 – Present

- Built enterprise-grade Power BI dashboards using complex DAX measures, dynamic parameters, and row-level security; connected to Snowflake via DirectQuery to deliver near real-time headcount and spend analytics across HR and Finance, reducing manual Excel reporting by 80%.
- Developed reusable SQL models in Snowflake and orchestrated refresh pipelines through Azure Data Factory, integrating raw HRIS and finance data into curated layers for consistent KPI consumption across departments.
- Implemented dbt tests for data freshness, completeness, and referential integrity, and documented each dataset in dbt's lineage view, improving data quality visibility and reducing error rates in dashboards by 35%.
- Partnered with finance leadership to define SLIs/SLOs and conformed dimensions (Worker, Cost Center, Position), ensuring all self-service reports pulled from the same certified metrics repository and supported governance alignment across 12 business units.
- Automated ad-hoc analyses using Python (pandas, numpy, seaborn) scripts for trend, variance, and correlation studies on compensation, tenure, and attrition, enabling leaders to identify key cost-to-performance relationships and optimize workforce planning.
- Collaborated with data engineering to migrate legacy Excel and SAS processes into a Snowflake + Power BI ecosystem, validating output parity through cross-environment SQL checks and versioning all definitions in GitHub for audit compliance.
- Standardized analytic documentation by publishing a Power BI data catalog in HTML/JavaScript, embedding dataset lineage, KPI definitions, and refresh schedules, reducing request turnaround time by 45% and enhancing transparency for stakeholders.

Cigna Healthcare- Data Analyst

Apr 2023 – Mar 2024

- Designed and deployed Power BI dashboards for provider onboarding, claims throughput, and utilization trends using row-level security, parameters, and DAX-based KPI measures, giving executives an interactive view into operational performance across regions.

- Integrated multiple data sources, claims, provider rosters, and HR datasets into Snowflake via Azure Data Factory, applying transformation logic and quality checks to ensure data consistency and reduce refresh failures by 40%.
- Partnered with compliance and governance teams to standardize data definitions and sensitive-field handling in alignment with HIPAA policies, ensuring proper data masking and controlled access within Power BI and SQL Server views.
- Developed automated Python scripts to analyze claims anomalies, track provider credentialing delays, and surface high-variance patterns; these analyses improved accuracy in reporting and shortened issue resolution cycles by 30%.
- Collaborated with clinical operations and analytics teams to create a data dictionary documenting accepted metric definitions, lineage, and validation logic, establishing a single source of truth for performance metrics and reducing back-and-forth clarification.
- Conducted statistical analysis in Python and SAS (correlation, regression, and variance tests) to identify relationships between claim volumes, provider load, and turnaround times, supporting monthly performance reviews with actionable insights.

Accenture- Data Analyst

September 2021 – June 2022

- Supported data modernization initiatives by developing SQL models and views in Snowflake to consolidate HR, finance, and project datasets, enabling cross-domain analytics and reducing redundant reporting requests.
- Built dbt pipelines with tests for freshness, null checks, and valid-value ranges; documented model lineage and definitions to improve transparency and consistency across the analytics delivery team.
- Collaborated with clients to translate business KPIs into measurable metrics, creating a Power BI “KPI cookbook” that detailed calculation logic, filters, and acceptance criteria to maintain alignment across multiple stakeholders.
- Automated data validation and reconciliation workflows using Python and Excel macros, ensuring consistent outputs between Workday extracts and Snowflake datasets, and cutting manual verification time by nearly 50%.
- Developed a simple internal web page (HTML, CSS, JavaScript) for intake and tracking of analytics requests, giving visibility into priorities, deadlines, and ownership which streamlined coordination and boosted team efficiency
