EDUCATION

Master of Science in Business Analytics

University of Illinois at Chicago • Chicago, Illinois • 2026 • 3.67

Bachelor of Engineering in Electronics & Communication

Panjab University, UIET • Chandigarh, India • 2018 • 3.73

EXPERIENCE

Data Analyst

Deloitte Consulting, Gurugram, India

June 2022 - July 2024

- Designed and automated end-to-end ETL pipelines in Azure, integrating multi-source sales and product data for a global FMCG client, cutting report turnaround time by 40% and enabling real-time decision-making for supply chain and pricing.
- Conducted root cause analyses on high-priority issues using advanced SQL queries and Python scripts, uncovering systemic data pipeline bottlenecks and coding logic errors; collaborated with client architects to deploy permanent fixes, improving pipeline stability by 50%.
- Partnered with business teams to translate complex data patterns into actionable insights, directly influencing product mix optimization, financial strategies, and logistics cost reduction. Delivered executive-ready RCA and KPI reports to Unilever stakeholders, aligning on data governance standards and enabling preventative monitoring into workflows.

Data Analyst Intern

Deloitte Consulting, Gurugram, India

January 2022 - May 2022

- Created Excel and Power BI dashboards tracking forecast accuracy, product category performance, and market-level KPIs, helping regional managers identify underperforming SKUs and high-growth segments.
- Led weekly data quality review sessions with stakeholders to address anomalies in submitted sales datasets; collaborated on root cause analysis and aligned corrective actions, cutting recurring data errors by 30% before monthly forecasting runs.
- Developed data ingestion workflows using Python and Azure to automate cleaning and merging of multi-country sales data; engineered key features such as lagged sales and growth rates to enrich datasets for forecasting models, improving data availability and reducing manual prep time by over 60%.

PROJECT

Airline On-Time Performance Analytics

University of Illinois at Chicago •

May 2025 - July 2025

- Engineered automated ETL workflows in Python leveraging Pandas and NumPy to clean, transform, and validate flight records, ensuring data integrity and readiness for downstream analysis.
- Developed dynamic, interactive Tableau dashboards integrating geospatial visualizations and KPI benchmarking to enable stakeholders to quickly identify delay hotspots and operational bottlenecks.
- Applied time series forecasting models in Python to predict delay trends and simulate impact scenarios for major carriers including American Airlines. Collaborated cross-functionally to translate insights into actionable recommendations, enhancing operational efficiency and customer satisfaction.

SKILLS

Programming Languages: Python, Scala, SQL, Spark-SQL, C++, R, Machine Learning, Microsoft Excel, Microsoft PowerPoint, Microsoft Word, Statistical Analysis, Data Visualization

Cloud Technologies: Azure, Azure Synapse Analytics, Azure Logic Apps, Azure Databricks, Azure Data Lake, Google Cloud Platform (GCP)

Databases: Graph DB, Spark, PostgreSQL

Software Tools: Tableau, Power BI, Azure Data Factory, Azure Analysis Server, JIRA, MS Project, Azure DevOps, MongoDB
