PROFESSIONAL SUMMARY

Detail-oriented Data & ML Engineer with over two years of experience delivering data-driven insights, automating reporting pipelines, and building predictive models to optimize operational and marketing strategies. Proficient in Python (pandas, NumPy, scikit-learn), SQL, and Power BI, with hands-on experience in customer segmentation, data cleaning, ETL development, and stakeholder dashboard delivery. Adept at uncovering business inefficiencies using statistical modeling and deploying end-to-end ML solutions to drive growth and automation in fast-paced environments.

SKILLS

Languages & Libraries: Python (Pandas, NumPy, scikit-learn), R.
Databases & Data Warehousing: SQL, Snowflake, Redshift, HDFS, Amazon S3
Big Data & Distributed Systems: Apache Kafka, Hadoop, AWS EMR, AWS ECS, AWS EKS
Data Visualization: Power BI, Tableau, Looker
Machine Learning & Testing: Predictive Modeling, A/B Testing, Supervised Learning
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Git, CI/CD Pipelines, Data Pipelines, ETL, Feature Engineering, Data Cleaning, Model Explainability (Grad-CAM++).
Certifications: AWS - Certified Solutions Architect Associate, Microsoft Certified Power BI Data Analyst - Associate.

EXPERIENCE

University of South Florida Graduate Assistant - Data Analytics Engineer	Tampa, FL May 2024 – May 2025
- Developed predictive pipelines using scikit-learn and R to classify academic risks; integrated Grad-CAM++ for model explainability and used W&B to track training metrics and stakeholder feedback. - Created SQL-based ETL pipelines to clean, aggregate, and normalize academic datasets across cohorts, reducing manual prep by 40% and ensuring consistent training outcome reports. - Designed Snowflake-compatible pipelines using pandas and NumPy to batch process intake data; automated ingestion jobs weekly, improving consistency and cutting data prep time significantly. - Built Tableau and Power BI dashboards with slicers, drill-down filters, and conditional logic to identify SLA violations, flag disengagements, and prompt early academic coaching interventions.	
Tech Mahindra Data Analyst	Hyderabad, India Jun 2022 – May 2023
- Collaborated with QA and delivery teams to build Excel + Tableau audit dashboards, integrating Python-driven rule engines and anomaly detectors for SLA tracking and KPI deviation alerts. - Engineered SQL diagnostic queries to trace pipeline lag and audit close-out performance; ran A/B testing on template variants, reducing reporting delays and increasing client alignment by 23%. - Simulated Kafka-based message streams to replicate real-time client intake events; orchestrated ingestion via EMR and archived event logs to S3, supporting asynchronous audit workflows. - Delivered Power BI and Looker dashboards fed from Snowflake and Excel data merges; generated insights for billing audits, surfacing contract breaches and overcharges in weekly reviews.	
Tech Mahindra Analytics Engineer	Hyderabad, India Apr 2020 – Apr 2020
- Designed interactive KPI dashboards in Power BI and Tableau to monitor delivery pace, effort ratios, and performance; ran A/B benchmarks to evaluate SLA breach mitigation effectiveness. - Built auto-validation scripts in Python using pandas/NumPy to flag intake file anomalies pre-processing; deployed jobs via ECS triggers and reduced reporting cycle times by over 60%. - Conducted exploratory analysis with Hadoop HDFS and EMR for high-volume audit ingestion; contributed to EKS-based workflow deployment for internal report generation modules. - Partnered with engineering and finance leads to normalize intake data in Snowflake; crafted parameterized SQL joins to align vendor billing with execution timelines and milestone completions.	

EDUCATION

University of South Florida (USF) Master of Science in Business Analytics & Information Systems.	Tampa, Florida Aug 2023 - May 2025
Relevant Coursework: Data Mining (Regression Techniques), Advanced Database Management Systems (Postgres, SQL, Normalized schemas), Analytical methods for Business, Big Data Applications for Business, Data Visualization, Data Science Programming, Project Management.	

ACADEMIC PROJECTS

Interpretable Deep Learning for Respiratory Condition Detection (PyTorch, GRAD-CAM++).
Built an end-to-end ResNet-18 pipeline to classify lung conditions from spectrograms, integrating Grad-CAM++ for explainability and W&B for model tracking; achieved 93% accuracy and 0.93 F1-score on denoised, balanced input data. Engineered preprocessing steps including wavelet denoising, bandpass filtering, and patch-based segmentation to ensure signal clarity, uniformity, and model robustness across respiratory classes.
