

JOHN HARRIS

EXPERIENCE

DevSecOps Software Developer and AI/ML Engineer

October 2022 – September 2025 | IBM, Atlanta, GA

- Designed, developed, and maintained RESTful APIs using Ruby on Rails in API-first applications, returning structured JSON responses for internal and external consumers.
- Worked within existing automated test suites (model and controller tests) to validate API behavior, data integrity, and regression stability.
- Active Public Trust Clearance. Contributed to secure, government-adjacent systems with Public Trust requirements.
- Working on small, kind, highly social and collaborative teams using Jira, within a Docker EKS organizational environment. Participated in code reviews, sprint planning, and Agile ceremonies in Jira.
- Worked extensively with PostgreSQL via ActiveRecord for relational data modeling in production Rails systems.

Full-stack AI/ML Software Engineer

September 2020 – September 2025 | House On File, Atlanta, GA

- Full-stack development of SaaS platform and Reachy Mini robot app for real-estate professionals and homeowners built with Ruby on Rails.
- In progress Microsoft Azure AI Engineer Associate Certification for the development of agentic Python LangGraph health advisory app using RAG and Azure Semantic Kernel SDK using Pydantic.ai.
- Utilized AWS S3 API for asset management.

Freelance Software Engineer

April 2020 – April 2021 | Covry - Freelance, Atlanta, GA

Clients include:

- Covry (shopcovry.com), April 2020 - June 2020. Worked with web design team to reimagine eyewear company's eCommerce homepage. Leveraged Shopify's Liquid language to create client-facing customizable components.
- House on File, August 2020 - September 2020. Helped with early wireframing and architecture before becoming project's lead engineer. Used PostgreSQL with ActiveRecord for transactional data storage and querying. Experienced deploying and supporting Rails applications in cloud environments (Azure and AWS).
