---

## Career Objective

Results-driven IT professional with expertise in Business Analysis, Quality Assurance, and Production Support, currently enhancing automation testing skills with Selenium and related frameworks. Experienced in requirement gathering, test planning, data validation, cross-team collaboration, dashboard creation, and 24/7 production support.

---

## Technical Skills

- Programming and scripting: Python, Java (core/basic, OOP, Selenium automation), shell scripting, Linux, Perl (basic)
- Automation testing: Selenium WebDriver, Selenium Grid, TestNG, Maven, Cucumber (BDD), data-driven testing (DDT), page object model (POM), automation framework design, QA testing, and documentation
- Databases and data handling: SQL Server, MySQL, Oracle, and MS Access (queries, joins, stored procedures, and data validation)
- Data visualization and reporting: Power BI, Tableau, Excel (pivot tables, charts, dashboards, formulas)
- Tools and platforms: JIRA, Confluence, SkyBot Scheduler, OpsView, Postman (API testing, JSON validation), Git, GitHub, SharePoint, Microsoft Office Suite, Jenkins (CI/CD), Splunk (basic knowledge)
- Methodologies: Agile/Scrum, Waterfall, SDLC, STLC, defect management, UAT support

---

## Work Experience

**Business Systems Analyst /Support Engineer** | Pike Corporation - Raleigh, NC | 09/2020 - Current

- Collaborated with stakeholders to gather, analyze, and document business requirements, translating them into user stories, use cases, and process flow diagrams.
- Led daily scrum meetings and worked with cross-functional teams to ensure timely project delivery and agile alignment.
- Customized JIRA workflows, managed issue tracking, and user permissions.
- Handled application access for Quickbase, Replicon, and Atlassian tools, along with security management, while ensuring compliance by following role-based access controls, periodic access reviews, segregation of duties, and strict approval workflows.
- Worked as a Replicon administrator and Subject Matter Expert (SME) for the Replicon application, maintaining accurate employee access, fixing timesheet-related issues, handling OTL production issues for time card failures, maintaining project data, and ensuring seamless integration between Oracle and Replicon.
- Supported payroll cycles by validating time entry reports using Excel formulas, like lookup logics, to identify and resolve discrepancies in data on a weekly basis.
- Developed Python scripts to automate data validation and API testing, increasing testing accuracy and efficiency.
- Designed and executed test suites; logged and tracked defects in JIRA to ensure software met functional and quality standards.
- Conducted QA for Fleetwave, LearnUpon, and Boomi integrations, validating data accuracy, system workflows, and end-to-end functionality.
- Served as a lead to review and approve test scenarios before test case creation, and conducted team reviews of test cases both prior to and after testing.
- Built detailed QA documentation, including test plans, test scripts, defect reports, and knowledge transfer guides for business and technical teams.
- Used advanced SQL for data validation, troubleshooting, and improving report accuracy.
- Designed optimized SQL queries for analyzing large datasets, and resolving data-related problems.
- Coordinated UAT testing, defect triage, and post-release validation to ensure smooth product rollouts.
- Built user-friendly Power BI dashboards with DAX and Power Query to monitor KPIs, and deliver actionable insights.
- Presented dashboards and system enhancements through demos to business teams before submitting them to the CAB for business approval.
- Coordinated UAT cycles, defect triage, and handovers after releases.
- Automated, repetitive checks with Python scripts, including API and JSON validations.
- Supported Boomi integrations through log analysis, debugging, and maintaining automation processes.
- Managed and monitored automated jobs using SkyBot Scheduler to ensure smooth operations.
- Monitored systems with OpsView, and resolved alerts quickly.
- Developed shell scripts for routine tasks, and used Perl for light automation needs.
- Provided end-user training, and prepared clear documentation to simplify adoption.

**Graduate Teaching Assistant** | NIU - Dekalb, IL | 01/2019 - 05/2020

- Automated grading and performance reports with Excel to enhance efficiency.
- Provided internal technical support, resolving file system and basic networking issues.
- Collaborated with cross-functional teams to address system-level challenges and improve documentation.
- Acquired hands-on experience in SQL reporting and automation of scheduled jobs.

---

## Education

Northern Illinois University | Dekalb, IL | 05/2020

**Master's:** Industrial and Systems Engineering

GPA: 3.6
