Professional Summary

Business Intelligence Engineer with 7+ years of experience building data infrastructure, automating reporting pipelines, and delivering actionable insights across industries. Skilled in Python, SQL, and cloud-based tools for end-to-end analytics solutions. Combines deep BI expertise with a systems-level understanding of infrastructure and DevOps, developed through self-hosting projects and current system administration work.

Work Experience

Data Engineer

RentDigital.com, June 2025 – Present

- ◆ Built and maintained automated ETL pipelines using Adverity and GCP BigQuery to consolidate marketing performance data from multiple channels
- ◆ Designed and optimized SQL models in BigQuery to deliver clean, analysis-ready datasets for reporting
- ◆ Developed Looker dashboards providing stakeholders with clear, actionable campaign insights and KPIs
- ◆ Partnered with marketing and operations teams to define metrics and ensure consistent, reliable reporting across campaigns

Business Intelligence Engineer

Freelance & Net-Conversion LLC, October 2018 – Apr 2025

- ◆ Built data warehouses with Python, SQL, Airbyte, and DBT for marketing and operations analytics
- ◆ Designed metrics and success criteria for client experiments and A/B tests
- ◆ Created dashboards and forecasting models in Tableau to support client decision-making
- ◆ Built scalable reporting pipelines using Python on GCP to deliver timely, accurate insights
- ◆ Maintained strong client relationships by aligning data solutions with business goals and providing proactive support
- ◆ Used LLMs to accelerate SQL generation and streamline data collection, cutting development time
- ◆ Improved dashboard and pipeline performance through data modeling, query optimization and user feedback

Labor Analyst/Data Supervisor

TJX Companies, Las Vegas Distribution Center May 2016 – September 2018

- ◆ Performed rapid ad-hoc analyses on labor data and presented findings to senior leadership and stakeholders
- ◆ Built an excel tool that visualized merchandise flow through warehouse and re-assigned labor to optimize KPIs
- ◆ Managed a 6 member data entry team processing 800 labor logs per day
- ◆ Identified incentive wage calculations errors using root cause analysis and rectified errors affecting over 1600 employees, amounting to well over \$200,000 in total wage corrections
- ◆ Developed multiple SOPs and training materials for operations job functions throughout the distribution center, and implemented version control to ensure protocol consistency across 3 shifts
- ◆ Provided in depth training for every stratum of employee on multiple topics such as warehouse product flow labor hours allocation, department layout, minimizing touches, etc.
- ◆ Served as the subject matter expert for labor statistics during union labor contract re-negotiations
- ◆ Participated in corporate standardization projects to build a dictionary of processes and procedures

Education

Bachelor of Arts in Economics

University of Illinois Champaign-Urbana

Skills

- Technical: Airbyte, DBT, Spark, Agile, SQL, Tableau, Python, AI Prompts, HTML/CSS, MS Project, Visio, Linux, Bash Shell Scripting, Docker, JIRA
- Work Authorization: U.S. Citizen, no sponsorship needed
