SUMMARY:

- 4 years of backend development across healthcare, compliance, customs, and manufacturing, building secure, cloud-native applications with Java 17, Spring Boot, and AWS.
- Designed and deployed RESTful APIs and scalable microservices architectures with Spring Cloud & JPA, handling 1M+ API calls/day and cutting manual processes by 40%.
- Implemented role-based authentication with Spring Security & JWT, reducing unauthorized access by 70%, and ensured API compliance with Swagger/Postman automation.
- Optimized data access layers (MySQL, PostgreSQL, DynamoDB) to improve query performance by 50%, and automated metadata-driven workflows with Apache Commons CSV & Java.
- Containerized services with Docker and deployed on AWS EC2/EKS with ALB, achieving traffic scalability and 99.9% uptime.
- Built scalable pipelines with AWS S3 & Lambda, processing 100K+ files/month, and enforced secure inter-service communication using AWS IAM.
- Developed responsive React.js UIs integrated with backend services, improving UX satisfaction scores by 30%.
- Automated CI/CD with GitHub Actions & Jenkins, reducing release cycles from 2 weeks, and maintained 85%+ test coverage using JUnit & Mockito.
- Enabled distributed logging/monitoring with DynamoDB & CloudWatch, cutting MTTR by 40% and ensuring proactive issue resolution.
- Enforced static code quality with SonarQube, lowering vulnerabilities and code smells by 60%.

TECHNICAL PROFICIENCIES

Programming Languages: Java 8/11/17 (Core & Advanced Concepts), JavaScript (ES6), HTML5, CSS3, Python.
Frameworks & Technologies: Spring Boot 2.x, Spring MVC, Spring Security, Hibernate ORM, RESTful APIs, Microservices Architecture

Frontend Technologies: Basic Angular (10/11/12), HTML5, CSS3, Bootstrap 4/5, JavaScript

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, API Gateway, CloudWatch, IAM, SNS, SQS)

Messaging and Streaming: Apache Kafka 2.6/2.7, RabbitMQ

Databases: MySQL, PostgreSQL (basic schema design, query optimization)

DevOps & CI/CD Tools: Jenkins, Git, GitHub, GitLab, Maven, AWS CodePipeline, CodeDeploy

Containerization & Orchestration: Docker, Kubernetes (AWS EKS)

Monitoring & Logging: AWS CloudWatch, ELK Stack, Prometheus + Grafana

Version Control: Git (GitHub, GitLab, Bitbucket)

Testing & Automation: JUnit 5, Mockito, Postman, Selenium (basic)

Operating Systems: Linux (Ubuntu, CentOS)

Methodologies: Agile (Scrum), Kanban, SDLC

Build & Dependency Tools: Maven, Gradle

Documentation & API Testing: Swagger/OpenAPI 3.0, Postman

EDUCATION

- University Of North Texas Master of Science in Computer Science & Engineering
- Koneru Lakshmaiah University Bachelor of Technology in Computer Science and Engineering

PROFESSIONAL EXPERIENCE:

Client: Bank of America

May 2024 – Present

Role: Java Developer

Roles & Responsibilities:

- Designed and deployed scalable, stateless microservices using Spring Boot, enabling real-time inventory updates and order tracking for 100K+ daily transactions, improving order lifecycle visibility by 40%.
- Developed and published secure RESTful APIs with Spring MVC, integrated JWT and OAuth2, reducing unauthorized access incidents by 60%.
- Integrated Apache Kafka to stream real-time events, achieving sub-second latency in order/inventory updates and supporting 10K+ messages/sec throughput.
- Built Kafka Consumers with retry and idempotency logic, ensuring 99.99% event processing reliability and maintaining eventual consistency across distributed services.
- Delivered an Angular 11-based admin dashboard for real-time inventory and alerts, reducing manual monitoring effort by 50% for operations teams.
- Improved performance during peak traffic (holiday season surges) by enabling elastic service scaling with AWS Auto Scaling Groups and ELB, handling 3× normal load without downtime.
- Implemented circuit breakers with Spring Cloud Netflix Hystrix, improving system resilience and cutting cascading failures by 35%.
- Leveraged AWS SQS and SNS for asynchronous communication, lowering service coupling and increasing system uptime to 99.95% SLA.
- Automated deployments with CI/CD pipelines (Jenkins, GitHub, AWS CodePipeline), cutting release cycles from 2 weeks.
- Dockerized and orchestrated services on AWS EKS (Kubernetes), streamlining deployments and reducing manual intervention by 70%.
- Enabled distributed tracing via AWS X-Ray, improving root-cause diagnostics speed by 45% across microservice calls.
- Monitored system health with CloudWatch dashboards & alarms, reducing MTTR (Mean Time to Recovery) from 2 hours.
- Created Postman Collections for API validation and regression testing, cutting QA effort by 25%.
- Led Root Cause Analysis (RCA) for major incidents, achieving a 30% reduction in production downtime year-over-year.
- Designed optimized PostgreSQL RDS schemas and indexing algorithms, boosting query performance by 50% on high-volume datasets.

Environment : Java 17, Spring Boot 3.1, Spring Cloud Netflix, RESTful APIs, Apache Kafka, OAuth2, JWT, Angular 11, Docker, Kubernetes (AWS EKS), AWS (EC2, S3, RDS, SNS, SQS, CloudWatch, X-Ray, ELB, Auto Scaling), Jenkins, GitHub, AWS Code Pipeline, PostgreSQL, Swagger/OpenAPI, JUnit 5, Mockito, Linux, Agile Scrum, SDLC.

Zoron It Solutions | Hyderabad, India

Mar 2021 – Aug 2023

Role: Associate Software Developer - Java

Responsibilities:

- Upgraded legacy Spring Boot codebase to Java 17, improving performance by 30% and ensuring long-term maintainability across microservices.
- Refactored deprecated components and integrated modern Java features (records, enhanced switch, text blocks), cutting boilerplate code by 25%.
- Designed & implemented an Import Verification API as part of the duty drawback workflow, enabling automated tax refund validation for imported goods.

- Developed secure REST endpoints with Spring Security (JWT), ensuring compliance and reducing unauthorized access attempts by 60%.
- Stored verification records in AWS DynamoDB, achieving sub-millisecond query times and scaling seamlessly for high-volume customs data.
- Deployed Dockerized microservices on AWS EC2 with ALB, handling 3× traffic spikes without downtime.
- Ensured system reliability with JUnit 5 + Mockito test coverage (85%+) and validated APIs using Postman regression suites.
- Documented endpoints in Swagger/OpenAPI, accelerating cross-team integration and reducing onboarding time by 40%.

Environment: Java 14, Spring Boot, Spring Security, Spring Data JPA, RESTful APIs, AWS EC2 (Amazon Linux), AWS DynamoDB, Docker, AWS ALB, JUnit 5, Mockito, Postman, Swagger/OpenAPI, Git, GitHub
