Summary

Full Stack Developer with over 2 years of experience designing scalable, distributed systems using Python and Java. Expertise in leveraging cloud infrastructure, including AWS and Terraform, to build robust, data-driven applications. Demonstrated ability in creating efficient RESTful APIs and securing architectures, ensuring optimal data quality and performance. Adept at agile collaboration and driving automation to support business-critical data curation and processing needs.

Skills

- **Languages:** Java, JavaScript, TypeScript, Python, HTML5, CSS3, SQL
- **Frameworks & Libraries:** React.js, Next.js, Node.js, Django, Flask, Tailwind CSS, Bootstrap, Chart.js, OpenCV
- **Databases:** MySQL, MongoDB, AWS DynamoDB, PostgreSQL
- **Cloud Services:** AWS (Lambda, S3, CloudFront, EC2, API Gateway, RDS), Firebase
- **DevOps & CI/CD:** Docker, Kubernetes, GitHub Actions, Webpack, Vite, Nginx, Terraform, Jenkins
- **Authentication & Security:** JWT, OAuth 2.0, Firebase Authentication, CSRF Protection, OWASP Standards
- **Testing & Monitoring:** Jest, Pytest, Cypress, Mocha, Postman, ELK Stack, Sentry
- **Tools & Methodologies:** Git, Agile, Scrum, WebSockets, GraphQL, RESTful APIs, Microservices Architecture, Webpack, ESLint, Swagger, WCAG Accessibility Standards, SEO Optimization

Education

SUNY Polytechnic Institute

Master of Science, Computer Science

Aug 2023 - May 2025

Presidency University Bangalor, India

Bachelor of Technology, Computer Science and Engineering

Aug 2018 - May 2022

Experience

Humana

Full Stack Developer

Feb 2025

NY, USA

- Developed an e-commerce platform using React.js, Node.js, and Python (Flask), integrating MongoDB and AWS DynamoDB to manage over 10,000 daily transactions, while ensuring efficient data querying and responsive design.
- Engineered RESTful APIs and WebSockets with Flask to enable real-time inventory updates, reducing latency by 30% through effective routing and server-side rendering.
- Containerized applications with Docker and deployed on AWS EC2 using Kubernetes, automating infrastructure with Terraform to support scalable, distributed system design.
- Enhanced security measures by implementing JWT, OAuth 2.0, and Firebase Authentication, along with robust token validation and CSRF protection, to safeguard user data and maintain compliance with OWASP standards.
- Established CI/CD pipelines using GitHub Actions and integrated testing frameworks such as Jest, Pytest, and Cypress, achieving 95% code coverage and ensuring reliable, bug-free deployments.
- Monitored and optimized system performance with the ELK Stack and Sentry, refining database queries, lazy loading, and resource usage to reduce downtime by 25% and improve page speed.
- Implemented an image recognition pipeline with Python, Flask, and OpenCV to automate product tagging, improving catalog accuracy by 20% with streamlined model inference and CDN integration.
- Deployed serverless APIs using AWS Lambda, S3, and API Gateway, enhancing cloud-based data processing in a distributed environment while reducing client response times by 15% and improving API documentation.

CitiusTech

Web Developer

Jan 2022 - Jul 2023

India

- Developed a patient appointment system using React, Node, MySQL, HTML5, and SCSS, optimizing database queries and schema design to support over 5,000 monthly users with low latency and WCAG-compliant accessibility.
- Optimized content delivery with AWS CloudFront by implementing caching strategies, lazy loading, and payload compression, resulting in a 35% improvement in page load times and enhanced SEO rankings.
- Integrated OAuth 2.0 and Firebase Authentication to secure user access, configuring token-based controls and session management to protect sensitive healthcare data and ensure HIPAA compliance.
- Configured Nginx for efficient traffic management by adjusting server settings and leveraging HTTP/2, which improved system uptime by 20% during peak usage.
- Built a responsive analytics dashboard using React.js, TypeScript, Tailwind CSS, and Chart.js, integrating MongoDB for real-time data visualization and interactive user interfaces for over 100 internal users.
- Managed data storage with AWS S3 and DynamoDB by optimizing indexing, partitioning, and GraphQL queries, which accelerated report generation and streamlined operational workflows.

- Automated deployments with GitHub Actions, Docker, and Webpack, integrating Git for version control and ESLint for code quality, thereby reducing environment setup time by 50%.

Projects

Web Developer Intern at Vridhi Digital Pvt Ltd

Vridhi Digital Pvt Ltd

- Developed and launched 15+ responsive e-commerce websites on Shopify, customizing themes using Liquid, HTML5, CSS3, and JavaScript to enhance UX and achieve a 30% improvement in mobile usability
- Integrated backend services with Java and optimized SQL queries in MySQL for faster data processing, reducing page load times by 20% and improving transaction handling efficiency
- Engineered an automated XML test case generator using Java and XSD Schema, streamlining regression testing workflows and supporting QA automation practices in an Agile environment
