SUMMARY

Computer Science graduate student with hands-on experience in Software Programming, AI/ML development, and full-stack applications. Skilled in Python, JavaScript, Django, React, and data science tools. Successfully delivered solutions during internships at Intel and Botshreyasi. Seeking internship, contract, or part-time roles to apply and grow my technical skills.

EDUCATION

M.S. Computer Science August 2024 - Present
Arizona State University, Tempe, AZ 3.16 GPA
Relevant Coursework: Foundations of Algorithms, Software Verification, Validation and Testing, Statistical Machine Learning

B.Tech. Computer Science and Engineering August 2020 - May 2024
Manipal University Jaipur, Rajasthan, India 3.80 GPA

TECHNICAL SKILLS

Languages: C, C++, Java, Python, OOPs, SQL

Web Technologies: HTML5, CSS3, Bootstrap, JavaScript, Node.js, Express.js, React.js, MongoDB, Django

Data-Driven Technologies: Data Science and Analytics, Machine Learning, Deep Learning, NLP, and Computer Vision

Tools: Git and GitHub

Extras: Software Testing, MS Excel, Data Structures, Algorithms

PROFESSIONAL EXPERIENCE

Botshreyasi, India: Python Django + ML Intern Jan 2024 - May 2024
BOT Shreyasi is a virtual Voice Conversational AI agent, which speaks to all customers over the phone just like a real agent.

- Engineered backend logic for the recruitment process, integrating seamlessly with the frontend. Enables users to create jobs, define rounds, specify inputs for over 20 different fields, and store them in the database.
- Implemented backend logic for campaign flows, allowing users to design flowcharts with unconfined interconnected nodes. Efficiently storing data for over 25 campaign flows and enhancing the automation of the hiring process.
- Developed a robust filtration system capable of processing boolean, advanced, and column-wise filter queries. Translating complex search queries into SQL queries and retrieving records with 100% accuracy.

Intel SIP (Remote), India: AI/ML Intern May 2023 - Aug 2023
Intel® AI For Workforce is a global AI skilling program for vocational students to build an AI-ready workforce.

- Took charge of developing an advanced real-time object identification model employing computer vision. Effectively deployed the model to identify car brands through logos with an accuracy of around 80 percent.
- Managed a multifaceted initiative aimed at crafting a product recommender system. This involved data scraping, text summarization, and building a sentiment analysis model targeting a reduction in extraneous expenditure by 30 percent.
- Pioneered the creation of a framework for predicting cryptocurrency prices with around 95 percent accuracy and a trading bot. The bot offered informed strategies for buying, selling, or holding assets based on crucial market indicators.

ACADEMIC/PERSONAL PROJECTS

Steam Users Anomaly Detection Spring 2025

- Built an anomaly detection framework for Steam user behavior using statistical, clustering, and machine learning methods on 470,000+ profiles. Combined model outputs with a consensus strategy to improve accuracy.

Homework Sincerity Checker Fall 2023

- Implemented a system that assesses a student's recently submitted essay by comparing it against their five previous essays. The model assigns a score on a scale from 0 to 100, with higher scores indicating a more genuine effort.

MBTI Personality Prediction Spring 2023

- Led a project focused on utilizing NLP for predicting MBTI personality types from a text classification dataset comprised of individual tweets to accurately classify individuals into one of the 16 MBTI personality types.
