SUMMARY

Results-driven Data Analyst skilled in large-scale data analysis and ETL pipeline design across finance and technology sectors. Proven ability to optimize data workflows, enhance reporting efficiency, and develop actionable insights through advanced analytics and visualization.

- Achieved a 30% decrease in manual reporting by creating Power BI dashboards for Bank of New York Mellon.
- Enhanced efficiency of monthly finance reports by cutting run times 50% through PostgreSQL T-SQL script optimization.
- Developed comprehensive ETL frameworks using SSIS, improving data reliability and accuracy for critical KPMG reports.

TECHNICAL SKILLS

Programming Languages: Python, R, C, Java, HTML, CSS, JavaScript

Machine Learning & Data Science: TensorFlow (Keras), Anomaly Detection, Model Deployment, NumPy, Pandas, Matplotlib

Data Engineering & ETL Tools: Apache Kafka, SSIS, Apache Airflow, Real-Time Data Streaming, Data Extraction, Data Cleansing, Data Quality, Data Transformation

Databases: SQL, MySQL, PostgreSQL, MongoDB, NoSQL, Oracle

Cloud Technologies: AWS (S3, EC2, RDS, Lambda), Docker

Data Analysis & Visualization: Tableau, Microsoft Power BI, Microsoft Excel

Version Control: Git, GitHub

Project Management Methodologies: Agile, Waterfall

EDUCATION/ACADEMIC BACKGROUND

Northern Arizona University – 3.8 CGPA

Master of Science in Computer Science

May 2024

Flagstaff, AZ

Vardhaman College of Engineering - 3.62 CGPA

May 2022

Bachelor of Engineering in Electronics and Communication

Hyderabad, India

EXPERIENCE

Bank of New-York Mellon

Jun 2024 – Current

Data Analyst

TX, USA

- Analyzed intricate financial datasets using advanced SQL queries alongside Python tools like Pandas and NumPy, uncovering key transaction patterns that strengthened risk management and met regulatory compliance deadlines.
- Developed interactive Power BI visualizations to monitor real-time risk and compliance trends, providing actionable insights that enhanced decision-making efficiency across critical financial operations.
- Designed comprehensive ETL solutions with SSIS and AWS Redshift to automate data integration from diverse sources into a centralized warehouse, reducing errors in quarterly risk reports and improving reliability.
- Built robust predictive frameworks utilizing machine learning techniques, slashing manual risk assessment processes by an impressive 50%, which accelerated strategic initiatives and improved data-driven outcomes.
- Improved inefficient SQL scripts within cloud-based platforms, cutting monthly financial report generation time by 50% and ensuring seamless system performance during high-pressure workloads.
- Deployed AWS S3 and Redshift technologies to manage and secure high-volume financial datasets, establishing scalable frameworks that facilitated cross-departmental collaboration and analysis for risk assessment.
- Collaborated with IT in an Agile environment, participating in sprint planning and daily stand-ups to architect streamlined ETL routines, aligning deliverables with business goals and driving continuous process improvement.

KPMG

Mar 2021 – Jul 2022

Data Analyst

India

- Examined client datasets with Python, SQL, and Excel, delivering data-driven insights that improved decision-making in finance and operations while ensuring timely compliance with regulatory standards.
- Created interactive Tableau dashboards to visualize key business metrics, enabling cross-departmental teams to access actionable insights directly, resulting in a 30% reduction in manual reporting efforts.

- Automated ETL workflows using Python scripting and SSIS, integrating diverse data sources across financial systems, which minimized processing times and enhanced accuracy for critical weekly reports.
- Developed machine learning models with Python to predict operational risks, providing forecasts that boosted financial performance and supported data-informed strategic decisions.
- Optimized SQL queries within AWS-backed systems, accelerating business-critical report generation by 30% and refining the precision of insights for key financial metrics.
- Utilized AWS operations (including EC2 and RDS) to securely manage and retrieve large-scale datasets, ensuring high availability and scalability for routine analysis and reporting tasks.
- Integrated Excel, SQL, and Python workflows to streamline data processes across major projects, driving operational efficiency and supporting cross-functional presentations with clear, actionable visualizations.
- Assisted in establishing data validation frameworks, improving the consistency and accuracy of financial reporting to meet internal audit and regulatory requirements.

PROJECTS

Real-Time Predictive Maintenance System for Industrial IoT Devices

Jan 2024 – May 2024

- Engineered a predictive maintenance framework leveraging Python, TensorFlow, and machine learning, achieving a 25% reduction in downtime and a 20% decrease in maintenance costs through advanced anomaly detection.
- Implemented real-time machine learning models to monitor equipment performance, uncovering the top three causes of failures and delivering actionable insights to optimize operations.

Churn Prediction for Subscription Services

Sept 2023 – Nov 2023

- Examined customer behavior patterns using Python and machine learning, enhancing churn prediction accuracy by 15% and reducing customer attrition by 10% through actionable retention strategies.
- Streamlined data workflows by 30% with refined ETL pipelines and predictive models integrated into NoSQL databases, while visualizing trends using Matplotlib and interactive dashboards.

Sales Data Analysis

Jan 2023 - Apr 2023

- Conducted time series analysis on multi-year sales data, identifying seasonal trends and increasing sales forecast accuracy by 18%, informing inventory and marketing strategies.
- Built interactive dashboards with Python and SQL to visualize product performance and enable real-time forecasting, supporting data-driven decision-making across product categories.
